## Cooperative Institutional Research Program

The Cooperative Institutional Research Program (CIRP) is a national longitudinal study of the American higher education system. Established in 1966 at the American Council on Education, the CIRP is now the nation's largest and longest empirical study of higher education, involving data on some 1,300 institutions, over 7 million students, and more than 100,000 faculty. To maximize the use of these data in research and training, the CIRP was transferred to the Graduate School of Education at UCLA in 1973. The annual CIRP freshman and follow-up surveys are now administered by the Higher Education Research Institute at the University of California, Los Angeles, under the continuing sponsorship of the American Council on Education.

## AMERICAN COUNCIL ON EdUCATION

The American Council on Education (ACE), founded in 1918, is a council of educational organizations and institutions. ACE seeks to advance education and educational methods through comprehensive voluntary and cooperative action on the part of American educational associations, organizations, and institutions.

## Higher Education Research Institute University of California, Los Angeles

The Higher Education Research Institute (HERI) is based in the Graduate School of Education at the University of California, Los Angeles. The Institute serves as an interdisciplinary center for research, evaluation, information, policy studies, and research training in postsecondary education. HERI's research program covers five broad areas: the outcomes of postsecondary education; academic administration and institutional management; faculty performance; federal and state policy assessment; and educational equity.

## Preface

This report summarizes the results of the Cooperative Institutional Research Program's annual surveys of college freshmen over the past twenty-five years. The Cooperative Institutional Research Program (CIRP) was established at the American Council on Education as a longitudinal study of the American higher education system, and time has proven that CIRP data have been invaluable to educational researchers and policy makers. A recent study of the higher education literature showed that CIRP publications and research based on CIRP data are among the sources most cited by researchers (see Budd, 1990).

For those interested in American higher education, this report documents an array of demographic, attitudinal, and social changes involving students entering the nation's colleges since the survey's inception in 1966. Major findings from this report point to significant changes in students' academic skills, self-image, and personal goals, as well as their preferences for college majors and careers. This report is an extension of the earlier work of Astin, Green, and Korn (1987) which documented data trends from the first two decades of CIRP surveys. The added perspective afforded by an additional five years of data has highlighted a number of new and interesting trends.

This report presents separate normative data summaries for men, women, and all freshmen. We have been careful to note all instances in which changes in the question format or response options occurred. Additionally, data for some questions have been aggregated to create a consistent time-series for these items. Most questions which appear in fewer than four surveys have been omitted from this report, with the exception of items which have been recently introduced and are expected to remain part of our research program for the next several years.

As with all large research programs, the CIRP has benefitted substantially from the commitment and insight of a great many people throughout the years. These colleagues, listed below, have had principal roles in the collection, analysis, and management of the CIRP surveys at various times since 1966:

| Alan E. Bayer | Carol Francis | John M. Light |
| :--- | :--- | :--- |
| Robert F. Boruch | Kenneth C. Green | Mary Jane Maier |
| David E. Drew | Margo King Hemond | Robert J. Panos |
| John A. Creager | Engin I. Holmstrom | Gerald T. Richardson |
| Penny Edgert | Sylvia Hurtado | Marilyn Schalit |

The CIRP has also been fortunate to have many friends and supporters in and around the higher education community. A succession of presidents at the American Council on EducationLogan Wilson, Roger Heyns, Jack Peltason, and Robert Atwell-have provided continuing
support for the CIRP. We are also indebted to Elaine El-Khawas, currently Vice President for Research and Policy Analysis at ACE, and to those on the CIRP advisory board who have provided strong direction and good advice over the years. Helen S. Astin, Kenneth C. Green, and Lewis C. Solmon have been critical colleagues over the past two and one-half decades, as was Allan M. Cartter prior to his untimely death over a decade ago. Allan also played a major role in establishing the CIRP in 1966 when he was Vice President of the American Council on Education. Grants from the Carnegie Corporation of New York, the Ford Foundation, the Sloan Foundation, the Exxon Education Foundation, the National Science Foundation, and the U.S. Department of Education have helped to support the CIRP and research based on the CIRP data over the past twenty-five years.

When federal funding was abruptly terminated five years ago, we turned to our "core" sample of institutions (those that have participated since 1966) for financial assistance to help us over a three-year period. Their response was generous and heartwarming. We also approached the Ford Foundation and Lilly Endowment for temporary assistance, and their subsequent support has been crucial in helping us make the transition to self-supporting status.

The CIRP would not have been possible without the continuing help of many campus presidents, institutional CIRP representatives, and the more than seven million students who have participated in the CIRP freshman surveys since 1966. Although the freshman survey data are processed at UCLA, they are collected at some 600 campuses across the country each year. Without this continuing institutional interest in and commitment to the CIRP, we would not have been able to generate the data upon which this report is based.

Finally, we owe special thanks to the staff of UCLA's Higher Education Research Institute. In addition to the generous and sustained support of our colleagues, we have been assisted in preparing this report by several HERI staffers who deserve special recognition. Linda Sax helped proof the data that appear in later sections of this report, while the careful readings of early drafts by Dr. Frank Ryan and Tamara Wingard helped improve this report immeasurably. The numerous details that accompany the publication of a report such as this were ably handled by Ellyne Riggs. Many thanks to all!

Eric L. Dey Alexander W. Astin William S. Korn

## The american Freshman: TWEnTY-Five Year Trends, 1966-1990

Each fall since 1966 the Cooperative Institutional Research Program (CIRP) has collected survey data to profile the characteristics, attitudes, values, educational achievements, and future goals of the new students entering college in the United States. Compiling the results of these twenty-five consecutive surveys has yielded an extremely interesting and informative portrait of the changing character of American college students. While addressing changes that directly affect higher education, the trend data generated by these consecutive annual surveys can also be viewed as indicators of this country's changing social context. This report, then, provides an overview of the first twenty-five years of data from the CIRP, highlighting key findings and discussing the significance that these findings have for American higher education and society at large.

The first seven freshman surveys were conducted at the American Council on Education, with support from the Carnegie Corporation of New York and the Ford Foundation. Since 1972, the annual CIRP freshman surveys have been conducted by the Higher Education Research Institute (HERI) at the University of California, Los Angeles, with the continuing sponsorship of the American Council on Education (see Astin, Korn, \& Berz, 1990). Each year the CIRP surveys some 250,000 full-time students who constitute the entering freshman classes at a nationally representative sample of about 600 two- and four-year colleges and universities across the United States. These data discussed below are presented under eight broad headings: Academic skills and preparation, demographic trends, high school activities and experiences, educational and career plans, majors and careers, attitudes, student values, and financing college.

## Academic Skills and Preparation

One of the most persistent educational concerns during the past decade has been the quality of the academic skills of American secondary school students. Continuing changes in student performance on national college admissions tests over the past several decades (Grandy, 1987; Turnbull, 1985) and more recent evidence based on cross-national comparisons of student knowledge and academic performance (Educational Testing Service, 1989) have helped to fuel these concerns. While there are strongly differing opinions about what might explain these differences and, moreover, whether such comparisons are valid (see for example Rotberg, 1990; Bradburn, Haertel, Schwille, \& Torney-Purta, 1991; Rotberg, 1991), a number of continuing trends in the annual CIRP surveys of entering freshmen seem to suggest that the academic preparation of students entering college has in fact declined.

The data in Table 1 provide additional evidence of the changing nature of academic skills and preparation of college freshmen. For example, the percentage of students who note that an
"important" or "very important" reason for deciding to go to college is "to improve my reading and study skills" has steadily increased since the inception of the CIRP, nearly doubling between 1971 and 1990. In addition, the number of students who reported that there was a very good chance that they would get "tutoring in specific courses" doubled between 1976 and 1990.

Table 1
Changes in the Academic Skills and Preparation of Freshmen

|  | CIRP Freshman Survey Year |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | 1971 | 1976 | 1981 | 1986 | 1990 |
| Reason for attending college: <br> Improve reading and study skills |  |  |  |  |  |
| Student expects to get tutoring <br> in specific courses |  |  |  |  |  |

${ }^{1}$ Noted as an 'Important' or 'Very important' reason for attending college.
${ }^{2}$ Noted as having 'A very good chance' of occurring during college.

The data on school-related activities provide additional evidence of a decline in academic preparation. Since new questions are introduced into the CIRP each year to reflect changing interests in the educational community, every question cannot be repeated each year. In order to simplify our analysis of how high school academic activities have changed over time, data are presented from two representative time periods, 1968-71 and 1987-90. In cases where data are available for several years during these periods, values have been averaged to provide a more stable estimate. This simplification makes it easier to see major changes between the late 1960s and the late 1980s.

About half of the items showed little variation over time, while the rest showed pronounced changes. (See Figure 1.) For example, the percentages of students who reported coming to class late, who did not complete homework on time, and who studied with or tutored other students were largely stable over time. In contrast, large declines-about one-fifth, or greater-were seen in the number of students who argued with a teacher in class, checked out books or journals from their school library, studied in a library, or were a guest in a teacher's home. Conversely, large increases were registered in the number of students who asked a teacher for advice after class. Evidence from studies currently in progress at HERI suggests that this last change may reflect an increase in the number of students who are experiencing academic difficulties. At the same time, it is interesting to note that the number of students who belonged to scholastic honor societies actually increased. While this finding seems to run counter to the trend of apparent declines in preparation, it may be that this increase is simply linked to either "grade inflation" or changing standards for admission to honor societies.

## Figure 1. Changes in Academic Activities in High School, 1968-71 and 1987-90

Notes: F Percentage includes students responding "Frequently" only. All other percentages based on "Frequently" and "Occasionally" responses.
N This item had a single response option that indicated if the student engaged in the activity. All other items had three possible response options-"Frequently," "Occasionally," and "Not at all."

* Text, order, or number of response items may vary from year to year.

Additional evidence that these declines in academic skills are real is found in the views of college faculty. When asked during the early 1980 s about the quality of academic preparation of current students compared to those of the 1970s, more than 80 percent of a national sample of college faculty reported that the situation had either not improved or was worse than what it was in the 1970s (Minter \& Bowen, 1982). For each professor who felt things had gotten better, there were two or more who felt that academic preparation had gotten worse. These perceptions applied regardless of the type of institution and regardless of the academic skill being rated (e.g., reading, writing, mathematics, sciences, etc.). A recent Carnegie Foundation (1989) survey of faculty showed that three-quarters of faculty thought students today are seriously underprepared in basic skills and nearly two-thirds ( 64 percent) believed today's students are "ill-suited for academic life." In addition, a large national survey of undergraduate teaching faculty conducted by the Higher Education Research Institute showed that only about one-quarter ( 27.4 percent) of college teachers felt that the students at their institution "were well-prepared academically" (see Astin, Korn, \& Dey, 1991).

Despite these apparent declines in student preparation, the CIRP data show that students have more positive views of their academic and intellectual abilities. Figure 2 shows that following a decline in the late 1960s, student ratings of their abilities in these areas generally grew stronger, reaching a high point in the mid-1980s. One possible explanation for this apparent contradictiondeclining levels of academic preparation coupled with increasingly positive views of intellectual ability-could be the problem of grade inflation in the secondary schools: Nearly half of the Fall 1986 freshmen ( 48.7 percent) thought that "grading in the high schools has become too easy." Moreover, data from the CIRP surveys show that in the late 1960 s, the students with C averages outnumbered those with A averages by better than two to one. During the 1970s, this ratio was reversed, so that those with $A$ averages currently outnumber those with $C$ averages. In recent years, CIRP data show a slight resurgence of grade inflation (as measured by the ratio of A to C students entering college) to its previous peak level, although it is too early to tell if this trend will continue on into the $1990 \mathrm{~s}^{1}$.

Figure 2. Student Self-Ratings of Intellectual and Academic Abilities
(Percentage of students rating themselves above average compared to their peers, selected years)

[^1]The National Commission on Excellence in Education (NCEE, 1982) performed a series of analyses which suggested that changes in the high school curriculum may have been partly responsible for declining levels of preparation and inflated grades. Students during the mid/late 1970s and early 1980s took fewer traditional academic courses (particularly in English and mathematics) and more "soft" electives such as band and driver training than did their counterparts in the late 1960s. Since the grading standards in these electives are likely to be less stringent than those in basic academic courses, this curricular shift would tend to inflate students' grade averages, while simultaneously impeding the development of basic academic skills.

It is interesting to note, however, that grade inflation has been rekindled even though college freshmen have been taking increasingly "academic" programs. The NCEE's report, A Nation at Risk, made recommendations concerning basic levels of high school preparation in various subject areas, and since then the CIRP has been tracking the number of students who meet or exceed these recommendations. As Figure 3 shows, the CIRP data indicate that the number of students taking more "academic" programs increased between 1983 and 1990, with the largest changes occurring in the level of foreign language preparation.

Figure 3. Percentage of Students Meeting or Exceeding Recommended* Number of Years of High School Study in Selected Areas, 1983 and 1990

*Recommendations by the NCEE for the amount of high school study in various fields include: English, 4 years; Mathematics, 3 years; Foreign language, physical sciences, and biological sciences, 2 years.

While the CIRP data show that students are taking more academic courses in high school, one discouraging note for persons interested in America's international "competitiveness" is the declining level of scientific preparation among entering college students. During the past seven years, the number of students meeting the NCEE's recommended levels of preparation in the physical and biological sciences has dropped by about ten percent. It may be that as students seek to strengthen their skills in core academic areas such as English and math, they tend to balance their schedules with "soft" electives rather than "hard" electives such as science. If this is the case, efforts to increase rigor in certain fields (e.g., math and foreign language) may have inadvertently led to weakened preparation levels in others (e.g., natural sciences), with the number of "soft" electives remaining largely unchanged.

Other data from the CIRP indicate that decreased secondary school standards may encourage students to be very optimistic about their academic expectations for college. Since the inception of the CIRP there has been a dramatic increase in the proportion of students who believe that they: (a) will be elected to an academic honor society (nearly tripling, from 2.9 percent in 1967 to 8.1 percent in 1990); (b) will earn at least a B average in college (up by one-quarter, from 32.7 percent in 1972 to 41.3 percent in 1990); and (c) will graduate with honors (increasing more than three-fold, from 3.7 percent in 1967 to 13.5 percent in 1990). Concurrent with these increasingly optimistic expectations, the number of students who expect to fail any courses in college has dropped by more than one-half (from 2.9 percent in 1967 to 1.3 percent in 1990).

## Demographic Trends

The demographic trends noted in the report summarizing the first twenty years of CIRP remain as salient, if not more so, today. Indeed, these trends have become more pronounced over time. For example, Astin, Korn, and Green noted that "one of the most widely publicized changes in demographic characteristics among entering college students was the reversal of sex ratios. Whereas more men than women traditionally have pursued postsecondary education, the past twenty years have seen a gradual shift in the sex composition of the freshman class to the point where a majority of today's entering freshmen are women" (1986, p. 10). Between 1969 and 1985, the proportion of women in the first-time, full-time student population had increased from 43.4 to 51.8 percent. By the Fall of 1990 , women accounted for 53.8 percent of first-time, fulltime freshmen.

While the changing sex ratio is important, the magnitude of this shift is small compared to striking changes in the racial and ethnic composition of the American undergraduate student population. Between the mid-1960s and the mid-1970s, the representation of minorities in
entering freshman classes nearly doubled. Considering that the absolute size of the freshman class also increased by more than 40 percent during this period, such a sharp increase in the proportion of minorities among entering freshman classes is all the more remarkable. The largest increases were observed among blacks, although American Indians, Mexican--Americans, and Puerto Ricans also began to increase their representation in the early 1970s. In a study of these changes through 1981, Astin (1982) reported that minorities were best represented in education and the social sciences, and most underrepresented in the sciences and engineering. At the graduate level, the greatest improvement in minority representation occurred in the professional fields of medicine and law, while the greatest underrepresentations were in doctoral programs in the sciences and engineering. This same study indicated that the greatest loss of minorities from the American educational system occurred in the secondary schools.

During the 1980s, the trend toward increased minority enrollments in the first-time, fulltime freshman class largely disappeared (also see Mortenson, 1991). For example, the representation of blacks among college freshmen increased from 9.2 to 9.6 percent between 1980 and 1990. The representation of Hispanics, on the other hand, actually declined over the same period: Mexican-Americans among first-time, full-time freshmen declined from 2.1 to 1.5 percent, while the percentage of Puerto Ricans dropped by nearly one-half, from 0.9 to 0.5 percent. In fact, the only nonwhite group with a substantially growing representation in the freshman class was Asian-Americans, who accounted for 1.4 percent in 1980 and 2.9 percent in 1990.

It seems likely that many of these enrollment trends can be attributed in part to changes in federal financial aid policies. During the Reagan-Bush years, there has been a pronounced shift in federal aid from grants to loans. As minority students are substantially more likely than whites to receive all forms of federal aid, these policy changes have likely had a disproportionate impact on minority students. In a recent study, for example, Astin (1990) reported CIRP trend data showing that the percentages of black and white students who picked their college because of "low tuition" was similar during the 1970 s and early 1980s. Since then these percentages have diverged dramatically so that black students are now significantly more likely than white students to say that they picked their college because of low tuition. Moreover, by seeking institutions with low tuition, black students have increasingly been forced to attend their second-and lower-choice colleges at a higher rate than white students.

## High School Activities and Experiences

The freshman survey instrument usually includes 15-20 items about the student's activities during the year prior to entering college. Some of the largest changes are found in the area of health-related behaviors such as smoking, drinking and drug use. The CIRP data show that the percentage of freshmen who frequently smoke cigarettes has declined by over one-third between 1966 and 1990 (from 16.6 to 10.6 percent, after reaching a low of 8.9 in 1987). The proportion reporting that they took sleeping pills also declined, from 5.9 percent in 1967 to 3.0 percent in 1989 (a 50 percent drop). Similarly, tranquilizer use declined more than 80 percent between 1967 and 1989 , from 9.9 to 1.7 percent. The percentage of students reporting that they frequently or occasionally drank beer, on the other hand, showed a decidedly different pattern: The prevalence of beer drinking started increasing during the late 1970s, peaking at 75.2 percent in 1981, but then began to decline so that students today are only slightly more likely to drink beer than those who entered college in the mid-1960s ( 58.2 percent in 1990 versus 53.5 percent in 1966 ).

While these trends suggest that students are using these substances much less than in the recent past (although smoking has made somewhat of a rebound in the past few years, possibly due to controversial "youth-oriented" advertising campaigns sponsored by the tobacco industry), there are very important gender differences in these trends. For example, although freshmen men and women are less likely to smoke now than in 1966 the pattern of decline has been very different for men and women. As Figure 4 shows, freshman men entering college in 1966 were about 50 percent more likely to be smokers than were their women classmates; in 1990, women were about one-third more likely than men to be smokers (indeed, the percentage of women smokers substantially increased during the 1970s while the percentage of men smokers declined over the same period). Thus, while smoking among freshman men has declined by over one-half during the past twenty-five years, smoking among women has declined by only one-tenth. On the other hand, use of tranquilizers has declined for all freshmen, but the decrease was much larger for women. As noted above, the use of tranquilizers has dropped some 80 percent since 1967, but the decline of use among women has been twice as steep as that seen among men. As a result, usage for men and women has converged: Whereas women in 1967 were twice as likely to be frequent users of tranquilizers, reported levels of use for men and women were essentially the same in 1989.

Table 2 summarizes changes in many of the CIRP activity items. As noted above, new questions are introduced into the CIRP each year to reflect changing interests in the educational community so not all questions can be repeated every year. In order to simplify the presentation of trends among these activity items, data are presented from three time periods over the life of the

CIRP: 1968-71, 1978-81, and 1987-90. In cases where data are available for several years during one of this periods, the values have been averaged to provide a more stable estimate. (Readers interested in data on specific activities in specific years should consult the data that appear later in this report.)

The CIRP data in Table 2 show that consistent declines have occurred in the percentages of students who are involved in cultural and religious activities. Although some of these declines are modest-such as the 4.5 percent decline in the number of students attending public recitals and concerts-many are dramatic. The number of freshmen who "frequently" or "occasionally" visited an art gallery or museum in the year prior to entering college, for example, has declined by nearly one-quarter (from 69.3 percent in 1968-71 to 53.7 percent in 1987-90). The number of students who had original writings or poetry published, or had a major part in a play declined by more than 10 percent, suggesting that active participation in cultural activities has declined as well. One exception to this pattern is the number of students who played musical instruments in high school. While this percentage has declined only slightly since the late 1960 s (from 39.0 percent in 1968-71 to 38.4 percent in 1990), it should be noted that the number of high school musicians has declined by about 10 percent since the early 1980s (following an approximately equivalent increase during the late 1970s). Participation in religious activities among freshmen has also been on the decline: The percentage attending religious services has dropped slightly, while the number who report having frequent discussions about religion has dropped by one-quarter.

Table 2
Activities of College Freshmen from Three Time Periods

|  | 1968-1971 | 1978-1981 | 1987-1990 | Relative Percentag Change |
| :---: | :---: | :---: | :---: | :---: |
| Cultural and Religious Activities |  |  |  |  |
| Played a musical instrument | 39.0 | 42.6 | 38.4 | -1.5 |
| Attended a public recital or concert* |  | 79.6 | $76.0^{1}$ | -4 |
| Attended a religious service | 88.5 | 85.4 | 82.6 | -6.7 |
| Had original writing or poetry published* N | 15.5 |  | 13.9 | -10.3 |
| Had a major part in a play ${ }^{N}$ | 15.7 |  | 12.9 | -17.8 |
| Visited an art gallery or museum | 69.3 |  | 53.7 | -22.5 |
| Discussed religion ${ }^{\mathbf{F}}$ | 27.5 |  | 20.9 | -24.0 |
| Political and Social Activities |  |  |  |  |
| Participated in organized demonstrations | $16.3{ }^{2}$ | 18.3 | 37.1 | 127.6 |
| Discussed politics ${ }^{\text {F }}$ | 25.9 |  | 18.5 | -28.6 |
| Worked in a local, state, or national political campaign* | 14.1 | 8.8 | 8.7 | -38.3 |
| Notes: $N$ This item had a single response option that indicated if the student engaged in the activity. All other items had three possible response options-"Frequently," "Occasionally," and "Not at all." <br> F Percentage includes students responding "Frequently" only. All other percentages based on "Frequently" and "Occasionally" responses. <br> * Text, order, or number of response items may vary from year to year. <br> ${ }^{1}$ Item not asked between 1987 and 1990. Percentage shown based upon data from the 1986 cirp survey. <br> ${ }^{2}$ Item not asked between 1968 and 1971. Percentage shown based upon data from the 1967 cirp survey. <br> The CIRP data show similar declines in participation in political and social activities. The number of students who worked in political campaigns declined by about two-fifths between the late 1960s and late 1970s, while the number who report having frequent discussions about politics declined by about one-third between the late 1960s and late 1980s. These figures suggest that students are not politically active in traditional ways. Other data from the CIRP also suggests that students may be disillusioned with and alienated from traditional politics. For example: (a) the number of students who participated in organized demonstrations has more than doubled since the late 1960s (about 2 in 5 freshmen reported being involved in demonstrations in the 1990 survey); (b) students increasingly expect to be involved in future protests; and (c) students are becoming more interested in influencing social and political values (Astin, Korn, \& Berz, 1990). These trends suggest that there is a rapidly expanding number of American college students who are dissatisfied with the status quo and with traditional political methods of bringing about social change. |  |  |  |  |

## Educational and Career Plans

The freshman survey data reveal that the proportion of freshmen planning to pursue graduate or professional degrees was fairly stable between 1970 and the mid-1980s ( 49.0 percent in 1970; 50.1 in 1978; and 50.4 in 1985). Since that time, however, interest in postgraduate study has been increasing regularly, setting record-high levels in each of the past five CIRP surveys. In 1990, three in five freshmen indicated that they planned to seek a master's, doctoral, medical, or law degree ( 60.7 percent).

While interest in law and medical degrees remained just below previous record levels, the popularity of the master's and doctoral degrees reached all-time highs in 1990 (37.2 percent and 12.4 percent, respectively). (See Figure 5.) The remarkable popularity of the doctoral degree is puzzling, considering that students continue to show little interest in scientific research (1.4 percent) and college teaching ( 0.4 percent), two fields where the Ph.D. is likely to be required. It may be that these high levels of degree aspiration reflect a strong need for achievement and status more than a switch in career interests (Astin, Korn, \& Berz, 1990).

A closer look at the CIRP data reveals that changes in degree aspirations are not the same for men and women. (See Figure 6.) The strong effects of the Women's Movement on women's educational aspirations can be seen by comparing the 1970 and 1990 figures. While men's interest
in doctoral, law, and medical degrees has remained steady or declined slightly in the 20-year period, women's interest has increased sharply. In 1970, women's relative interest in such degrees ranged from about one-half to one-eighth of the men's. By 1990 women showed a level of interest roughly equal to that of men.

## Majors and Careers

An examination of the undergraduate major and career choices of entering students reveals some of the most interesting changes contained in the CIRP data. In fact, many of the strong trends noted during the first 20 years of the CIRP (see Astin, Green, \& Korn, 1986) have ended and even reversed themselves in surprising and striking ways during the past five years.

One of the largest changes in the popularity of fields measured by the CIRP has been associated with the field of business. The proportion of students interested in business careers more than doubled between 1966 and 1986 (from 11.6 to 24.1), with interest in business majors following roughly the same upward path. (See Figure 7.) During the past few years, however, interest in business has stopped its climb and is currently in steep decline, with preference for business careers dropping to 18.4 percent of 1990 freshmen (compared to 21.8 percent in 1989 and 24.6 percent in 1987, the peak year). Choice of business majors showed a similar decline, to 21.1 percent in 1990, compared to 24.5 percent in 1989 and 27.3 percent in 1987 . While the reasons for this turnaround are not clear, it may be that competition for jobs has increased, or that
many students are disillusioned by the field of business because of continuing revelations of business scandals such as insider trading, stock fraud, and the savings and loan debacle.

While interest in business is now in steep decline after a record-setting increase, interest in education majors and careers has slowly continued to rebound from the all-time low in the early 1980s. (See Figure 8.) The 1990 survey shows that 9.0 percent of freshmen were interested in teaching careers (up from 8.2 percent in 1989 and the low point of 4.7 percent in 1982). It should be noted that despite these increases, interest in teaching careers remains much lower than the level of interest registered in the late 1960s: Interest in secondary teaching careers is only about onethird of the all-time high, while interest in elementary teaching is about one-half of what it once was. Despite continuing claims that students interested in teaching careers should major in liberal arts fields rather than in education, interest in education majors has also been on the increase and is about equal to the level of interest registered in 1966 ( 10.6 percent in 1966 versus 9.9 percent in 1990). What this means, in essence, is that prospective teachers are more inclined than ever to major in education.

Interest in both science and engineering careers has continued to drop steadily in the past few years. (See Figure 9.) Student interest in engineering and computer science reached an all-time high in 1983, but their popularity-both as majors and as career choices-has declined sharply since then, by roughly one-half for computer science and by about one-quarter in engineering. While interest in majoring in biological or physical sciences has declined somewhat, interest in
mathematics and statistics has experienced the largest relative decline, dropping from 4.5 percent in 1966 to a mere 0.7 percent in 1990. Although computer science may have captured some of the students who otherwise might have majored in mathematics or statistics, the recent 85 percent decline in the number of freshmen interested in math and statistics is quite alarming.

Figure 8. Freshman Interest in Teaching Careers (Percentages)

Figure 9. Freshman Interest in Engineering, Math, and Computer Science Majors (Percentages)

The first two decades of the CIRP recorded declining interest for most of the traditional liberal arts disciplines (especially in the humanities [English, literature, foreign language, philosophy, theology], the fine and performing arts [art, music, speech, and theater], and the social sciences [anthropology, economics, geography, history, political science, psychology, social work, and sociology]). However, the past five years have seen a slight recovery. Interest in the social sciences, for example, increased to 6.6 percent in the 1990 survey, up from 1982's all-time low of 3.9 percent. While the recovery in other liberal arts fields has not been as pronounced, the sharp declines recorded in the early 1980s have given way to a trend of slow growth.

Given the pronounced changes in the major field choices of freshmen, it is not surprising to find that career preferences have changed quite dramatically-especially among women. Figure 10 , for example, shows how women's career choices have changed on a percentage basis, using choices from 1966 as the base year (given the wide range of percentage changes, Figure 10 displays these changes on a logarithmic scale). In addition to the decreased interest in educational careers discussed above, the figure shows that the number of women interested in engineering careers has increased more than ten-fold since 1966 (from 0.2 to 2.4 percent), while interest in law careers increased by over 750 percent. Interest in business careers has declined since the mid1980s, although current interest is still five times what it was in 1966. Interest in nursing careers has rebounded somewhat from a low in the mid-1980s, with current levels of interest about onequarter higher than they were in 1966.

## Attitudes

Each fall since 1967 the attitudes of the entering freshmen have been assessed by means of statements concerning a variety of controversial issues. The freshmen are asked to indicate whether they agree or disagree with each statement. Trends in freshman attitudes can be estimated by charting changes in the percent that agree ("strongly" or "somewhat") with each statement. Taken together, these data provide a fascinating 25-year profile of the changes not only in student attitudes but also in the attitudes and values of the larger society. To simplify the task of summarizing these results, the attitudinal statements are divided into three broad categories: Political orientation, personal and social issues, and sex, marriage and family.

## Political Orientation

The recent and widespread publicity about the growing "conservatism" of American college students does not really describe the trends observed in the freshman survey. (See Figure 11.) While it is true that the percentage of freshmen identifying themselves as "liberal" or "far left" has decreased substantially since the high of 38.1 percent in 1971 (the 1990 figure is 24.4 percent), it has increased somewhat from its low of 19.7 percent in 1981. The percentage of freshmen identifying themselves as "conservative" or "far right," however, did not rise at a corresponding rate. Rising steadily from a low of 14.5 percent in 1973 to 20.7 percent in 1981, the trend in "right-wing" students has hovered in the range of 18.7-22.8 percent ever since. The trends for students identifying themselves at the extremes of the political orientation scale-either far left or far right-have been relatively flat, ranging from 1.6 to 3.1 percent for far left, and from 0.6 to 1.6 percent for far right.

Figure 11. Changes in Political View (Percentages)

Striking changes in political identification have occurred in the "middle-of-the-road" category. From a low of 45.4 percent in 1970, the percentage of freshmen identifying themselves in this manner rose by almost one-third to 60.3 percent in 1983 , then declined by one-tenth to 54.7 percent in 1990. While the gains in middle-of-the-road identification between 1973 and 1983 came almost exclusively at the cost of liberal/far left groups, the decline since 1983 has been matched by virtually equal increases in the liberal/far left and conservative/far right groups.

It is interesting to note that changes in political view among freshmen have not been the same for men and women. As Figure 12 shows, the decline in students identifying themselves as politically liberal was roughly equal for men and women, reaching bottom in the early 1980s. A strikingly different picture emerges when we consider the percentage of students identifying themselves as conservative or far right: While the percentage of women who are conservative has remained stable-about one in seven-over time, the percentage of men who label themselves as being conservative increased about 75 percent between 1971 and 1990 (from 16.2 to 25.8 percent, with a peak of 28.9 percent in 1989). Given the changes in the role of women in American society, it may be that this "gender gap" actually represents a backlash against the Women's Movement by men.

## Personal and Social Issues

Despite these changes in the ways students identify themselves politically, there has been no monolithic trend away from positions traditionally considered as "liberal" or toward positions traditionally considered as "conservative." Indeed, our data point to a mixed bag of changes in student support for a variety of issues: While more students support "liberal" positions on environmental and health issues, their views have become more conservative on "law and order" issues. (See Figure 13.) The number of freshmen who believe that "the federal government is not doing enough to control environmental pollution" has been rising steadily since the mid-1980s (to 87.9 percent in 1990, up from the all-time low of 77.6 percent in 1981). Similarly, the percentage who say that it is "essential" or "very important" for them to "become involved in programs to clean up the environment" has more than doubled in the last four years (from a low of 15.9 percent in 1986 to 33.9 percent in 1990). Student support for a national health care plan has also increased, with nearly three-quarters of all freshmen agreeing that such a plan should be established to cover everyone's medical costs (up from a low of 54.8 in 1981). While such support might be indicative of increased liberalism among students, other trends show that students might be becoming more conservative: Student opposition to capital punishment declined by more than one-half between 1970 and 1990 (from 56.3 to 21.5 percent) while the number of students who believe that "there is too much concern in the courts for the rights of criminals" increased by one-quarter over the same period (from 51.6 to 66.3 percent).

When considering issues of personal choice, student attitudes are again mixed. (See Figure 14.) Support for the legalization of marijuana rose sharply during the early to mid-1970s only to be followed by an equivalent decline since that time (from 19.4 percent in 1968 to 18.6 in 1990, with a peak of 52.9 percent in 1977). Surveys of high school students, college students, and young adults show that marijuana usage also peaked in the late 1970s, and has declined sharply since then (Johnston, O'Malley, \& Bachman, 1991). Whether this recent decline in support for legalizing marijuana actually represents declining usage, a growing awareness of the potential health dangers of marijuana use, or both, is not clear. In this regard, it should be noted that the use of alcohol among college freshmen has decreased substantially during recent years while acceptance of mandatory drug testing for employees and job applicants has increased-from 71.0 percent in 1988, the first year it was asked, to 80.4 percent in 1990.

Nearly two-thirds of all freshmen currently support legal abortion-the 64.9 percent agreement recorded in 1990 is an all-time high. Our data also show that as a group, freshmen do not see this as a "women's issue": Men and women support legal abortion at equivalent rates (in 1990, 65.0 versus 64.8 percent for men and women, respectively). It is interesting to note that support for legal abortion jumped sharply in 1989, apparently in response to Supreme Court rulings that thrust the issue back into the political arena.

Figure 14. Attitudes Toward Social and Personal Issues (Percentages)

## Sex, Marriage, and Family

Several survey items address student attitudes toward sex and marriage. The item showing the largest changes concerns the role of women: "The activities of married women are best confined to the home and family." Student endorsement of this traditional view of women declined sharply between 1967 and 1986, but has been increasing steadily since that time ( 25.2 percent in 1990, up from a low of 20.3 in 1986). Even though men are still more likely than women to support this view ( 30.6 versus 20.5 percent), the decline in support among men ( 66.5 to 30.6 percent) has been about as sharp as the decline among women ( 44.3 to 20.5 percent). (See Figure 15.)

Other sex and family issues in the CIRP have addressed premarital sex, divorce, and homosexuality. Students are about equally divided on whether there should be laws prohibiting homosexual relationships, and sentiment on this issue does not appear to have changed much in recent years. The small increases during 1986 and 1987-from 47.9 percent in 1985 to a peak of 53.2 percent in 1987-are most likely due to increased awareness of the threat of AIDS, combined with a limited understanding of the causes and prevention of HIV infection. The 1990 figure of 44.4 percent is an all-time low, suggesting that both tolerance and understanding of AIDS in particular and homosexuality in general has increased among college freshmen. (Support for widespread, mandatory testing to control AIDS also continues to decrease steadily.) Despite this increased
tolerance overall, the CIRP data show that men are still much more likely than women to support such laws (in 1990, 56.0 versus 34.5 percent).

Since 1988, the CIRP has included an item measuring attitudes toward "date rape" (Students are asked whether they agree with the statement "Just because a man thinks that a women has 'led him on' does not entitle him to have sex with her"). Data from the last three CIRP surveys show that about 85 percent agree with this item, and this percentage is steadily increasing (among men agreement has risen from about three-quarters to four-fifths, while among women agreement has risen from 91.0 to 93.3 percent). These figures suggest that increased awareness of the problem of date rape-especially on college campuses-has led freshmen to be more sensitive to this issue. Nevertheless, the significant percentage of men who disagree with this statement (20.8 percent in 1990) suggests that much remains to be done to increase awareness of this problem.

About half the 1974 freshmen endorsed living together before marriage and this support has increased gradually since then, peaking at 52.1 in 1987. Similarly, acceptance of sexual relations among people who have known each other for a very short time has generally increased since 1977, with slightly more than half of all freshmen currently accepting this practice ( 51.0 in 1990). It is interesting to note that endorsement of this item has continued to grow despite increased publicity about the health risks associated with casual sexual relations. Yet here, as elsewhere in the data, we find profound differences between the sexes. (See Figure 15.) About two-thirds of men ( 66.3 percent) and slightly more than one-third of the women ( 37.9 percent) support the idea of sex between people who have known each other only for a short time. Men are also more likely than the women are to support living together before marriage ( 57.3 versus 45.0 percent in 1989). Thus, despite the changes in the views of both sexes toward traditional women's roles, men are still more likely than women to hold non-traditional views toward casual and premarital sexual relationships.

The number of freshmen who expect to marry in college or within a year of graduating declined during the late 1960s, but has remained fairly stable since the mid-1970s. Approximately 6.1 percent of 1975 freshmen estimated that there was a very good chance that they would marry in college, while 5.4 percent of 1990 freshmen gave similar odds. On the other hand, the percentage of students who reported that "raising a family" was an essential or very important goal has changed dramatically. (See Figure 16.) Following sharp declines in the early 1970s, interest in raising a family has steadily increased to a point that it has recovered much of its earlier popularity ( 69.5 percent in 1990 versus 71.4 in 1969). It is also interesting to note that the gap between men and women has been reduced, from about 10 percent in 1969 to less than 2 percent in 1990.

Figure 16. Freshman Interest in Raising a Family, by Gender (Percentages)

## Student Values

Each year the freshman survey includes a list of fifteen to twenty items describing various personal values or "life goals." Although many of the value statements have waxed and waned in popularity since the 1960s, two of the items have shown especially consistent and contrasting trends. The item showing the strongest upward trend is "being very well-off financially." Between 1970 and 1987, student endorsement of this value increased from a low of 39.1 percent to an alltime high of 75.6 percent of the entering freshmen. Over the same period, the value showing the most precipitous decline in student endorsement is "developing a meaningful philosophy of life." (See Figure 17.) Although the latter was the most popular value in 1967, endorsed by 82.9 percent of the entering freshmen, it has been regularly decreasing throughout most of the history of the CIRP. It continued a steady decline until 1987, when it reached its low point of 39.4 percent. Since 1987, however, the trends have reversed: Interest in developing a meaningful philosophy of life has been increasing gradually while wanting to be very well-off financially has become slightly less popular. It may be that this recent reversal, coupled with the sharply declining interest in business careers and majors, are early signals of a shift away from a materialistic philosophy.

Figure 17. Freshman Life Goals (Percentages)

* Interpolated values

The freshman data also show that after a prolonged decline in interest in participating in altruistic activities, students have recently shown revived interest in such activities. As shown in Figure 18, student interest in helping others in difficulty has recently recovered somewhat from its 1986 low point of 57.2 percent, rebounding to 62.0 percent in 1990. Similar reversals have occurred with interest in helping to promote racial understanding and in participating in programs to clean up the environment. Both items declined during most of the 1970s and early 1980s, then rebounded sharply between 1986 and 1990. Interest in environmental activism more than doubled between 1986 and 1990 (from 15.9 to 33.9 percent).

Recent changes in the responses to several of the value questions also suggest that students are becoming increasingly interested in bringing about social change. Figure 19 shows that along with a declining interest in traditional politics (see above), there has recently been a sharp increase in the number of students who want to be personally involved in political and social action. Although there was little variation in the level of freshman interest in influencing political and social values through the 1970s and early 1980s, the data since the mid-1980s show that interest in these areas has climbed sharply. Interest in participating in community action programs has increased recently as well, rebounding to a level roughly equal to that registered in 1970 when it was first recorded.

Figure 18. Freshman Interest in Altruistic Activities (Percentages)

Figure 19. Freshman Interest in Political and Social Action (Percentages)

## Financing College

The CIRP data reveal some significant trends in how students pay for college. The data show that students have had to become increasingly self-reliant as federal support has dwindled. Between 1978 and 1990, the CIRP data show steady increases in the numbers of students who relied upon parental support (from 71.8 to 78.7 percent) and summer work (from 47.1 to 55.5 percent) to pay their school-related expenses. Moreover, the percentage of students receiving $\$ 1,500$ or more from these sources increased at a far greater rate during the same period-from 31.1 to 53.2 percent for parental support, and from 2.9 to 7.4 percent for summer work. Concurrently, there has been a sharp drop in the proportion receiving Pell Grants (from 31.5 in 1979 to 23.2 percent in 1990, with an all-time low of 16.9 percent in 1986), and a correspondingly sharp rise in reliance on Guaranteed Student Loans (from 10.4 percent in 1978 to 22.7 percent in 1990, with a peak of 26.3 percent in 1981). Finally, the data show an increased reliance on parttime employment during the mid- to late $1980 \mathrm{~s}^{2}$, other savings (from 20.5 to 31.7 percent), loans from the freshman college ( 3.6 to 6.0 percent), and loans from other sources (from 3.7 to 6.2 ).

It would appear that as federal student aid has shifted during the Reagan-Bush era from grants to loans, the nation's colleges have attempted to compensate, to some extent, for the loss of federal grant funds by providing more assistance from institutional resources. Other HERI research (Astin \& Inouye, 1988) suggests that this greater demand on institutional resources is one of the major causes of rapidly increasing tuition, given that tuition revenues provide the principal source of student aid in most private colleges. Students have responded to the declining availability of federal grants by depending more on institutional and parental support and by taking on more parttime employment (as well as greater loan debt).

Other trends in the CIRP data suggest that in addition to forcing students and their parents to assume more of the financial burden for educational expenses, changes in financial aid programs may have forced many students out of higher education altogether. Figure 20 , for example, shows the median parental income of college freshmen (in constant 1990 dollars) graphed with the percentage of students receiving Pell grants. As the number of Pell grant recipients has declined, the median parental income has increased. This suggests that, rather than taking out loans (which were intended to replace Pell grants), some individuals from less-advantaged backgrounds simply chose to forego college (at least as full-time students), thus forcing the median income upward.

The CIRP data also show that the median income of the parents of college freshmen is at near record-high levels: Between 1966 and 1988, the median family income of college freshmen increased about 15 percent, from $\$ 38,700$ to $\$ 44,800$ in constant 1990 dollars; the 1990 median income was $\$ 42,500$. In addition, the relative difference between the median income of the parents

[^2]of college freshmen and the median national household income is currently near its highest level (over 20 percent), and is equivalent to that first registered in 1966 by the CIRP. (See Figure 21.) Despite real progress toward equity in higher education (as measured by the gap in median income between those taking advantage of higher education and the national median) during the 1960s and 1970s, the record of the 1980s shows a reversal of the earlier gains.

Figure 21. Trends in Median Family Income
(In 1,000 s of 1990 dollars, three year moving average)

## A Summary of Major Trends

The freshman survey data are a rich resource of information about changes in the nation's college students over the past twenty-five years. A summary of the major trends is offered below.

## The Changing Role of Women

Perhaps the most dramatic changes revealed in our data concern the effects of the Women's Movement and the changing role of women in American society. Evidence of these changes comes to us from all directions:
a) Large shifts in preferences for majors and careers, away from the traditional fields of school teaching, nursing, social work, and homemaking, and toward business, law, medicine, science, and engineering; women also show greater interest in pursuing advanced degrees.
b) Behavioral changes, including increased cigarette smoking, decreased use of tranquilizers, and greater participation in competitive sports.
c). Attitudinal changes, including much greater support for job equality for women and rejection of the traditional homemaker role for married women.
d) Value changes, reflected in more widespread endorsement by women of traditionally male materialistic and power goals.
e) Demographic changes, reflected in more women entering higher education.

## Major and Career Preferences

The field which has experienced the largest and most consistent surge in student popularity-and more recently an extremely sharp decline-has been business. Computer science showed strong growth from the mid-1970s through 1980 but has also dropped sharply since then. Engineering has been perhaps the most volatile of the major fields and career preferences: It nearly doubled in popularity between 1974 and 1983, but has dropped substantially since then.

The biggest overall losses have involved education and the traditional liberal arts and science fields: The humanities, fine and performing arts, social sciences, and the natural sciences. These declines have averaged 50 percent over the past twenty-five years; several fields lost as many as 80 percent of their prospective majors between 1966 and 1990.

The career field that has lost the largest absolute number of students has been school teaching. Despite a slight rebound since 1983, student interest in elementary and secondary school teaching is still only one-fourth of what it was in the late 1960s. Although the absolute numbers are smaller, interest among college freshmen in becoming college teachers or scientific researchers has declined more than 80 percent since the mid-1960s. Other career fields showing substantial declines in student interest involve almost all the human service occupations (such as the clergy, social work, nursing, and the allied health professions).

Given the nation's great historical reliance on its human and scientific resources, the substantial decline of student interest in all scientific fields-especially mathematics and statistics-and such careers as college teacher and scientific researcher should be viewed with some alarm. In the long run, this problem will only be exacerbated by the declining student interest in teaching at all levels. Moreover, given the expected declines in the overall size of the collegetrained population entering the labor market through the year 2000, these declines in the proportions of students interested in scientific fields and careers can only extend existing shortages in the nation's talent pool of highly trained professionals.

## Attitudes and Values

The freshman survey data show significant and complex changes in student attitudes and values over the past two and one-half decades:
a) Following increased interest in material and power goals, coupled with decreased social concern during the 1970s and early to mid-1980s, students today have shown a renewed interest in social action and altruism. These changes parallel the changes in college major and career preferences summarized above (especially the recent sharp reversal of interest in business fields).
b) A strong overall migration in political identification from liberal to middle-of-the-road, coupled with a strong increase in conservatism among men. It may be that these changes have been fueled by increased politicization of issues that cross traditional political orientation lines (see below).
c) Despite changes in the ways students identify themselves politically, there has been no monolithic trend away from liberal, or toward conservative, positions on specific personal and social issues. Our data point to a mixed bag of changes in student support for a variety of issues: Greater support for "liberal" positions on environmental and health issues, together with more conservative views on "law and order" issues. Support for legal abortions has jumped sharply in recent years, as has support for increased government action on environmental issues.

## An Editorial Postscript*

We would like to close by considering the more practical question of what the academic community can-or should-do about these trends, particularly the changes in careers, majors, and values. Perhaps the best way to show how educators and policymakers can influence the shape of things to come is to speak for a moment about what is probably the most fashionable topic in education these days: The notion of excellence. All of us who work in academe inevitably adopt some perspective-at least implicitly, but hopefully explicitly-concerning what we regard as "excellent" education. For some time now, one of us has argued that our traditional notions of "excellence" in higher education do not serve us well (Astin, 1985). There are two favorite approaches which have dominated higher education policy over the years. The "reputational" approach, which equates excellence with an institution's ranking in national polls and surveys, amounts to a kind of popularity contest which may or may not tell us anything about the effectiveness of an institution's educational programs. Americans love to do competitive rankings of just about everything-from athletic teams to corporations to television shows-and our universities are no exception. The "resource" approach, which equates excellence with such things as the endowment, average faculty salaries, research grants, and the SATs of the entering freshmen, assumes that having a lot of such resources automatically guarantees an excellent educational program. These two traditional approaches are, of course, mutually reinforcing, since having a good reputation brings in additional resources and having abundant resources helps to enhance an institution's reputation. Unfortunately for the advocates of these traditional views, research on college student development shows that having a great reputation and a lot of resources does not assure an effective educational program; indeed, some of the most effective undergraduate education occurs at institutions with only modest reputations and resources.

We believe that these traditional ways of defining excellence should be replaced by one which directly reflects the institution's effectiveness in educating its students-a "talent development" approach. Basically, the talent development approach argues that true excellence resides in the ability of an institution to have a positive influence on its students' intellectual and personal development. In talent development terms, an "excellent" institution is one that develops the talents and abilities of its students to the fullest extent.

In certain respects these three approaches to excellence offer an interesting parallel to the changing patterns of student interests and values that we observed during much of the 1980 s. The reputational and resources views, for example, parallel the increased student interest in money,

[^3]power, status, and in business careers. In contrast, the talent development view parallels student concern for others and for the society and careers in the human service occupations. Under the reputational and resource approaches, the institution devotes its energies to enhancing its power, prestige, and possessions. Under the talent development approach, the institution invests its energy and resources into helping students develop their talents and abilities to the fullest.

Our support of the talent development approach is not intended to suggest that institutional reputations and resources are not important. Institutions obviously need resources to operate and they need reputations to attract both students and resources. The problem is really the relative emphasis that we give to these different conceptions, our tendency to treat reputations and resources as ends in themselves, and the naive assumption that the talent development problem will take care of itself. Research on student development shows that being prestigious or having a lot of resources by no means guarantees a high quality educational experience (Astin, 1977; Bowen, 1977).

Why do we tend to favor the resource and reputational approaches to excellence, and why hasn't the talent development approach-which seems so consistent with our educational mission-been more widely accepted and adopted? In large part the ultimate answer to this question seems to lie in the larger society and the particular philosophical or value perspective that holds sway at any point in time. We are speaking here, in other words, of how people view human nature and American society.

Some views of America maintain that our greatest achievements as a society are the result of our intense competitiveness and that it is only through our competitive spirit that we have been able to achieve greatness as a society. Free enterprise is certainly a competitive view, where individuals are given the maximum opportunity to compete with each other for the largest possible share of the resources and the rewards in the society. This competitive world view has deep roots in the history of western civilization, but the rise of Darwinism-with its emphasis on competition among species and the survival of the fittest-provided a scientific framework in which to view the development of the human species as a competitive enterprise. In Darwinian terms, the human species was able to survive and develop because we were more "fit" than any other species. This competitive world view also provides the basis for what the British sociologist Michael Young called the "meritocracy." In a pure meritocracy, the rewards and resources of the society are allocated in proportion to the abilities of each individual. "Rewards," in this context, are the social equivalent of survival. The more able persons get a disproportionate share of the resources and privileges, whereas the least able people get the smallest slice of the pie. It might be worth noting in passing that this competitive world view has implications not only for how we view education and the larger society, but also how we approach international relations and foreign policy.

A cooperative world view provides a vastly different frame of reference. Under this view, human progress and the development of the society is seen as depending upon the ability of individuals and groups to cooperate with each other. The survival and evolution of humankind is seen not as a victory in the struggle with other species or as a conquest of the environment, but rather as a manifestation of our ability to work cooperatively with each other toward common goals and to live in harmony with the environment.

It has become increasingly apparent to us that many of the issues that plague higher education these days can be better understood when viewed in terms of this cooperativecompetitive framework. Take, for example, the different conceptions of excellence. The reputational approach is inherently competitive, since it fosters competition among institutions for higher and higher places in the pecking order. And the most obvious manifestation of this competition takes place in the arena of resources, where institutions compete with each other for the largest possible share of the resource pool. If my institution manages to improve its position in the pecking order by recruiting some of your faculty stars or National Merit Scholars, then your position in the reputational pecking order is proportionately diminished. In pursuing the resource approach to excellence, institutions inevitably compete with each other for funding, faculty stars, and students. Even within a single institution, the resource view breeds competition: Academic departments compete with each other over faculty positions and other resources, academic personnel compete with student affairs personnel over a finite resource pie, and trustees and administrators compete with faculty for a control over the resource allocation decisions. Claims for a larger share of resources are frequently buttressed by arguments about maintaining or enhancing quality or excellence. In short, it seems clear that both the reputational and resource approaches to excellence are manifestations of a competitive world view.

The talent development approach to excellence, on the other hand, symbolizes a very different value perspective. To this view, all institutions share a common purpose in trying to maximize the educational and personal development of their students. When an institution succeeds in its talent development mission, this success in no way diminishes what any other institution can do. Indeed, institutions can learn from each other by sharing information about their educational successes and failures. Under such a cooperative arrangement, the success of any one institution benefits and contributes to the success of all others.

What is particularly ironic about our inclination toward competitiveness in education is that the very institution that should be the most competitive in its mentality-American business-has been recently talking a lot about cooperation. Recent research suggests, for example, that one of the most striking features of an effectively managed business organization is its capacity for getting employees to work cooperatively toward common organizational goals. They see uncontrolled competition among employees as potentially destructive, particularly when it discourages
teamwork and encourages employees to curry favor with higher management by making their peers "look bad." The key ingredient to developing a truly cooperative work environment, of course, is to develop a sense of trust among employees at all levels of the organization.

The capacity to be a good team member and to work cooperatively with co-workers should be one of the "basic skills" that we try to develop in our general education programs. Even in an academic setting, these qualities are becoming increasingly important. The expanding knowledge base, for example, has served to intensify the competition among disciplines for a piece of the curricular action, simply because there are now so many "worthy" items of knowledge to be learned, and because it's possible to make a plausible case for requiring almost any of these new items in a core curriculum. Clearly, the need for a cooperative approach has never been greater.

In many respects the undergraduate years are the ideal time to explore value issues such as cooperation versus competition, or materialism versus spirituality. If you ever find yourself entertaining the fantasy that there is any such thing as a "value-free" curriculum, recall Alan Bloom's The Closing of the American Mind or the recent flap over changes in the Stanford undergraduate curriculum, when then-Education Secretary Bennett attacked the Stanford faculty for "selling out" the Great Books tradition and for caving in to pressures from "special interest" groups such as women and minorities. It might be a useful exercise for each of us periodically to take a hard look at our curriculum with the following question in mind: To what extent does our current curriculum content reflect an awareness of and concern with issues such as environmental degradation, racism, poverty, world hunger, social justice, arms control, or world peace, and to what extent does it merely reflect a miscellaneous conglomerate of the faculty's specialized disciplinary and research interests? And what about curriculum objectives? While we hear a lot these days about developing such things as critical thinking and communication skills, we have not yet given enough attention to the social and value implications of such curriculum objectives. In the area of communications skills, for example, most of us focus on the improvement of writing and speaking, but few of us talk about the art of good listening. This neglected skill is not only of great practical importance in many career fields, but it also epitomizes the essence of the cooperative spirit. Being able to listen to and understand the thoughts and feelings of others is of vital importance in developing the trust and empathy which is so necessary for cooperative living.

## The Implicit Curriculum

But most of us are inclined to forget that curricular content represents only a small portion of the "values education" that goes on in academe, and that our most important "teaching" may be independent of course content. This "implicit curriculum" includes the process of establishing a
formal curriculum, the teaching methods we use, how we grade and test our students, how we run our institutions, and how we treat each other as professional colleagues.

Let's now consider the extent to which this implicit curriculum fosters the development of such qualities as cooperation, trust, social responsibility, and good citizenship. Does the implicit curriculum teach students the value and necessity of teamwork and cooperation? Does it show them how to cooperate? To what extent does it foster the development of contrary values, such as individualism and competitiveness?

Let's take pedagogical techniques as an example. Most lower division teaching, especially in our larger universities, still uses the traditional lecture format. Several national reports have criticized this traditional model of instruction on the grounds that it assigns students too passive a role, thereby reducing involvement and inhibiting the learning process. It has other serious deficiencies as well: It leads students to view learning as a solitary process, where each student works independently of every other student. Indeed, not only do students work independently, but also they are encouraged to compete with one another. This emphasis on competition is reinforced by the grading system, which is basically comparative or relativistic. The practice of grading "on the curve" does not tell us much about what a student has actually learned in a class; rather, it merely ranks students relative to one another. Under these conditions, one student's success signifies failure for some other student.

What is most regrettable about this heavy dependence on the traditional lecture format is that it ignores a growing body of research which suggests that "cooperative learning" modelswhere students teach each other or work together on joint projects-are clearly superior to competitive approaches. But the most important thing about cooperative learning is that it facilitates the development of teamwork skills and encourages the individual student to view each classmate as a potential helper rather than as a competitor. Under cooperative learning, students learn to work together toward common goals.

The limitations of competitive classroom learning are compounded by the fact that professors must grade students as well as teach them. The conflict of interest generated by the professor's dual role as mentor and judge was recognized many years ago by Robert Hutchins, who believed that the learning process should be separated from the testing and grading process. As president of the University of Chicago, Hutchins established the "Examiner's Office," where students could go when they felt ready to be tested or examined on some subject. Long since abandoned at Chicago, the Examiner's Office remains a largely untested concept which offers some real potential for effectuating a greater sense of trust and cooperation between professor and student.

What about collegial relations? Although students usually do not participate directly in faculty personnel actions, they are usually aware of the criteria used in hiring, promoting, and
tenuring faculty. The peer review process provides a concrete example of how faculty members relate to each other. Since undergraduates are likely to see their professors as authority figures and even role models, the manner in which personnel actions are carried out helps to shape students' impressions about the nature of peer relationships among professional colleagues.

First, let us consider the criteria used. We are all familiar with the "publish or perish" syndrome. In effect, this dictum gives the greatest weight to a candidate's research and scholarship, relegating the functions of teaching, advising, colleagueship, and public service to second-class status. Scholarship is, of course, a highly competitive and individualistic activity, and the most productive scholars are accorded significant professional status and recognition. While some articles and books have multiple authors (signifying a cooperative or joint effort), such publications generally get less credit in the review process than do single-authored pieces. In other words, the process does not encourage scholarly collaboration.

Volumes have been written about how this skewed reward system negatively affects the quality of teaching, so we will not belabor the point here. Suffice it to say that under this system, professors have the strongest incentives to pursue their professional self-interest (publication and scholarly visibility) at the expense of both the student and the institution. While the scholarly and professional success of its faculty may further the reputational and resource "interests" of the research university, resulting in greater national prestige and increased access to research grants and contracts, this emphasis compromises the university's undergraduate teaching mission.

But the publish-or-perish philosophy exacts even higher costs. The typical faculty review process gives almost no weight to what might be termed "good colleagueship," yet good colleagueship is one of the most important, but least appreciated, talents that a faculty member can have. Besides service on departmental or institutional committees and task forces, good colleagueship is manifested in many ways. Some professors are excellent technical consultants, able and willing to confer informally with colleagues on a wide range of disciplinary issues. Others make themselves available to serve as trouble shooters or mediators. Still others simply provide positive and constructive inputs at meetings and in their daily interactions.

The point of all of this is that there is no way we can shield our students from the value implications of how we run our institutions and how we treat each other as colleagues.

## Cognitive or Affective?

When we talk about cooperation or about the student's values and beliefs we are, of course, dealing with so-called "affective" outcomes. Educators have tended to shy away from discussing such outcomes because they are felt to be too "value-laden." However, the very act of deciding on a curriculum is itself a value judgment, and if you take the time to read through a few college
catalogues it becomes clear that the concept of a liberal education is typically rationalized in terms of "affective" outcomes such as character and citizenship. The very idea of good citizenship in a democracy like ours necessarily includes the notion of an informed and involved electorate. Democracy is based fundamentally on a cooperative concept of governance. Yet recent national elections in the United States suggest that our citizenry is probably not very well informed and certainly not very involved in the democratic process. If we were able to effect just one change in our curriculum and our implicit curriculum, it would be to put much greater emphasis on the importance of producing graduates who appreciate the importance of being well informed and active participants in the democratic process.

Some of our higher education policy makers and leaders have recently become concerned about the extreme competitiveness of our students and our institutions and are openly advocating a greater emphasis on promoting cooperation, good citizenship and other affective outcomes. The Campus Compact Project, for example, is a consortium of some 200 institutions that are working together under the sponsorship of the Education Commission of the States to establish community service programs for undergraduates. In California, the legislature has passed a law requiring each campus of the University of California and the California State University to establish some kind of volunteer or public service program for undergraduates.

In his report to the Board of Overseers a few years ago, Harvard president Derek Bok said that "universities should be among the first to reaffirm the importance of basic values such as honesty, promise keeping, free expression, and nonviolence...[and] there is nothing odd or inappropriate...to make these values the foundation for a serious program to help students develop a strong set of moral standards." Bok also notes that "students must get help from their universities in developing moral standards or they are unlikely to get much assistance at all."

These trends would suggest that our political and higher education leaders are implicitly suggesting that social responsibility and concern for others are among the qualities that higher education institutions should try to foster in their students.

## Recent Student Trends

Even the students seem to be reflecting some dissatisfaction with the status quo. It is important to realize that the rather depressing trends toward excessive materialism and competitiveness seemed to peak out a couple of years ago and have either remained level or declined somewhat during the past two years. A number of other findings from our most recent freshman surveys suggest that we may be seeing the emergence of some very different student tendencies. For example, we see that the most current crop of college freshmen appears to be more protest-prone even than students in the late 1960s. Not only have more of them participated in
demonstrations in high school, but more of them anticipate getting involved in protests during their college years. In the same vein, during the past two years we have seen a resurgence of student interest in influencing social values and changing the political structure.

What specific issues are the students concerned about? Perhaps the single biggest issue for students these days is the environment. Interest in the environment bottomed out during the later years of the Reagan Administration, but has shown a substantial rebirth during the past couple of years. Although the level of interest and likely involvement among students is still below the environmental heyday of the early 1970s (when then first "Earth Day" was held), the environment is going to continue growing as a popular issue for students if these recent trends are maintained.

Two other areas where we find greater student concern in the past few years are the development of a national health care plan and abortion rights for women. Support for legalized abortions has remained steady during the years in which we have asked the question, with the exception of 1989 which witnessed a sharp increase in student support. This one-year change may well be a reaction to the U.S. Supreme Court's "Webster" decision. It seems likely that some of the students who were mildly opposed to legalized abortion in previous years may have jumped over to the support side when they began to realize that their or their partner's right to an abortion may indeed be taken away by the courts.

The past few years have seen increases in three other areas: Student altruism, support for school integration through busing, and interest in promoting racial understanding appear to be on the rise. These trends, together with those just discussed, suggest that we are witnessing the emergence of a small but rapidly growing minority of students who are concerned about a variety of social issues and who are inclined to become actively involved in working with these issues. Considering that the strong majority of students are still heavily focussed on business careers and on making money and achieving power and status, it is interesting to speculate on what is likely to happen on our college campuses during the next few years. Apparently, we have a rapidly growing minority of students who may well challenge the majority viewpoint on a number of political and social issues.

## Conclusion

Considering that we are looking here only at trends from the past few years that were preceded by two decades of contrary changes, it may be wishful thinking to believe that America's long romance with greed and competitiveness may be beginning to reverse itself. But there are other signs on the horizon. The fall 1990 election showed that many people in the United States are fed up with politics as usual, and that a groundswell of public reaction may be developing against "the best government money can buy." Such sentiments have been fueled by a growing awareness
that the much-maligned "tax and spend" politics of the left has been replaced by a "borrow and spend" politics of the right, which has really served to exacerbate rather than shrink existing disparities between rich and poor. There is also evidence of a growing national (and international) consciousness about the plight of the planet's ecosystem. Indeed, the environment, more than any other single issue, appears capable of galvanizing the most student interest and activist energy over the next decade.

Whether higher education is going to encourage such trends or merely continue its mindless pursuit of resources and reputation will depend largely on what we in the academy do. American academics are fond of complaining about "governmental threats to autonomy," but the fact remains that we still retain control over most of the decisions and policies that really matter: Whom to admit and on what basis, what to teach and how to teach it, how we test and grade students, how we hire and reward our professors and administrators, and how we structure our "implicit curriculum." Perhaps most important of all is whether we are going to continue to give the raising of money and the enhancement of our reputations greater priority than the development of our students' talents, and whether we are going to continue to ignore the so-called affective talents that seem to be so crucial to effective living in a multicultural and multinational community.

As we look around we see the great achievements of the intellect everywhere: Atomic energy, genetic engineering, modern agriculture, modern medicine, and computers and other electronic marvels of every conceivable type. It is truly astounding. And at the same time we see the great affective and emotional and spiritual divisions that threaten our very existence: Religious fanaticism and hatred, racial prejudice, ethnocentrism, nationalism and other political divisions, widespread criminal behavior in the land of opportunity, and massive poverty and starvation in the face of unprecedented affluence. What this suggests is that it is time to redress the balance. It is time to begin shifting some of our educational interest and energy in the direction of our affective side-to begin concerning ourselves much more directly with the development of beliefs and values that are going to heal our divisions, and which will help to create a society that is less materialistic, competitive, and selfish, and one that is more generous and cooperative.

[1] Figures for the years 1966-1976 are from annual Norms Reports. Figures from 1977-1990 computed from disaggregated majors/careers (see Appendix E)
[2] List of disaggregated majors was expanded in 1970, 1973, 1978 and 1982.
[3] List of careers for 1973-1976 not directly comparable to other years.

[1] Response and processing options rendered data from 1973-1977 not comparable to 1978-1990.
[2] In 1987-1990, highest response option of " $\$ 3,000$ or more" was dropped, since these programs have upper limits less than $\$ 3,000$.

[1] Response and processing options rendered data from 1973-1977 not comparable to 1978-1990.
[2] In 1987-1990, highest response option of " $\$ 3,000$ or more" was dropped, since these programs have upper limits less than $\$ 3,000$.

["] Results were not comparable to those of other years due to changes in question text or order.
[1] Texi, order or number of response options may vary from year to year.
[2] Respondent allowed to mark all responses that apply from 1971-1990. Responses may sum to more than $100 \%$.
[3] See Appendix D for a discussion of variation in question texts and aggregation procedures.
[4] Responses from 1978-1982 excluded because they were not recorded in a comparable manner.

[1] Text, order or number of response options may vary from year to year.
[2] Respondent allowed to mark all responses that apply from 1971-1990. Responses may sum to more than $100 \%$.
[3] See Appendix D for a discussion of variation in question texts and aggregation procedures.
[4] Responses from 1978-1982 excluded because they were not recorded in a comparable manner.

[1] Response and processing options rendered data from 1973-1977 not comparable to 1978-1990.
[2] In 1987-1990, highest response option of " $\$ 3,000$ or more" was dropped, since these programs have upper limits less than $\$ 3,000$.

["] Results were not comparable to those of other years due to changes in question text or order.
[1] Text, order or number of response options may vary from year to year.
[2] Respondent allowed to mark all responses that apply from 1971-1990. Responses may sum to more than $100 \%$.
[3] See Appendix D for a discussion of variation in question texts and aggregation procedures.
[4] Responses from 1978-1982 excluded because they were not recorded in a comparable manner.

[1] Text, order or number of response options may vary from year to year.
[2] Respondent allowed to mark all responses that apply from 1971-1990. Responses may sum to more than $100 \%$.
[3] See Appendix D for a discussion of variation in question texts and aggregation procedures.
[4] Responses from 1978-1982 excluded because they were not recorded in a comparable manner.

["] Results were not comparable to those of other years due to changes in question text or order.
[1] Response options for these items were "frequently", "occasionally" and "not at all".
[2] Response option for these items was a single bubble to be marked if the student engaged in the indicated activity.
[3] In 1966-1971, response option was a single bubble as noted in [2]. In 1984-1990, response options were as in [1].
[4] Text, order or number of response options may vary from year to year.

[1] Response and processing options rendered data from 1973-1977 not comparable to 1978-1990.
[2] In 1987-1990, highest response option of " $\$ 3,000$ or more" was dropped, since these programs have upper limits less than $\$ 3,000$.

## Appendix A

## Research Methodology

# Appendix A <br> Research Methodology 

## DEVELOPING THE NATIONAL NORMS

The trends data reported here have been weighted to provide a normative picture of the American college freshman population for persons engaged in policy analysis, human resource planning, campus administration, educational research, guidance and counseling, as well as for the general community of students and parents. This Appendix describes the procedures used to weight the annual freshman survey results to produce the national normative estimates.

## THE NATIONAL POPULATION

For the purposes of the CIRP, the population of institutions has been defined as all institutions of higher education listed in the Opening Fall Enrollment (OFE) files of the U.S. Department of Education's Higher Education General Information Survey (HEGIS, since 1986 known as IPEDS-Integrated Postseconday Education Data System). An institution is considered eligible if it was operating at the time of the HEGIS/IPEDS survey and had a first-time full-time (FTFT) freshman class of at least 25 students. In addition, a small number of institutions or their branches are included even though their separate enrollments were not available from the OFE files, because they were part of prior HEGIS/IPEDS populations and are known to be functioning with FTFT students. Generally, the OFE files available for any given year lag one or two years behind. The 1990 population figures, for example, were obtained from the OFE file for Fall, 1988. In 1990, the national population included 2,727 institutions.

It should be noted that the population reflects institutions of "higher education," rather than "postsecondary education." Most proprietary, special vocational or semiprofessional institutions are not included in the population. Two-year colleges offering AA degrees or those described at "terminal vocational" are included.

## Institutional Stratification Design

The institutions identified as part of the national population are divided into 37 stratification groups based on institutional race (predominantly white vs. predominantly black), type (two-year
college, four-year college, university ${ }^{1}$ ), control (public, private nonsectarian, Roman Catholic and Protestant) and, for four-year colleges and universities, the "selectivity level" of the institution (for two-year colleges, enrollment is used in place of selectivity). Selectivity, defined as the average composite SAT score of the entering class, was made an integral part of the stratification design in 1968, and was revised and updated in 1975. Figure A1 shows the distribution of institutions across the 37 stratification cells.

It should be noted that the dividing lines between low, medium and high selectivity levels are different for different types of institutions, as shown below:

Changes in stratification assignment do occur; institutional requests for review are honored each year. Appendix C lists the 1990 stratification cell assignments of all institutions that have participated in the CIRP freshman survey.

Having defined the population in terms of the stratification cell scheme, the OFE file is used to compute the male and female FTFT population in each cell. These population counts form the target counts of the weighting procedure.

## IdENTIFYING THE NORMS SAMPLE

Generally speaking, an institution is included in the National Norms sample if it provided a representative sample of its FTFT population. The percentage required of a sample is based on the type of institution from which it was collected:

Four-year colleges 85\%
Universities $75 \%$
Two-year colleges $50 \%$

Institutions whose sample proportions were less than but close to these cutoffs are included if the method used to administer the survey showed no systematic biases in freshman class coverage.

[^9]
## Figure A1: 1990 Data Bank Population

Selectivity (SEL), used to define strata for four-year colleges and universities, is an estimate of the mean score of entering freshmen on the Verbal plus Mathematical portions of the Scholastic Aptitude Test (or the converted SAT math and verbal equivalents from the American College Test composite). The method of estimation is described in detail in Astin and Henson (1977).

Enrollment (ENROLL), used to define strata for two-year colleges, is based on the total number of first-time, full-time entrants.
The stratification design presented here is used to group schools to develop population weights and should not be used as measure of institutional or program quality.

Information about the FTFT population and the method of survey administration are obtained from participating institutions at the time they return their completed surveys. In the event an institution did not return FTFT information, counts from the most recent OFE survey are used. This procedure, although not optimal, is adequate unless the institution experienced a substantial change in its FTFT population changed since the last HEGIS/IPEDS survey.

Table A1 lists the total institutional and student counts for the Norms sample and the entire survey sample for the 25-year period of this report. Table A2 describes results of this selection procedure in more detail for the year 1990.

## WEIGHTING THE SAMPLE

Those institutions identified as being part of the Norms sample are then weighted by a twostep procedure. In the first step, the counts of the male and female FTFT population for each institution are divided by that institution's male and female FTFT respondent count. The resulting weights, when applied, bring the male and female respondent counts up to the corresponding counts for the population at that institution.

The weighted counts for all participating institutions in each stratification cell are then summed, and divided into the national male and female FTFT counts for all institutions in that stratification cell. The resulting between-institution weights bring the male and female counts for each stratification cell up to the corresponding national counts for that stratification cell. The last two columns of Table A2 show the between-institution weights that were applied to the 1990 sample.

## COMPARISON GROUPS

Having computed weighted counts for each stratification cell, the counts are combined to form comparison (or Norms) groups. Norms groups are hierarchically organized, allowing participating institutions to compare their results at different levels of specificity. A college assigned to stratification cell \#14, for example, can compare its results with the following five Norms groups:

Private nonsectarian, very high selectivity
Private nonsectarian
All private 4-year colleges
All 4-year colleges
All institutions

Table A3 shows the 1990 distribution of schools and respondents across the 35 Norms groups normally printed in the annual American Freshman report. The results reported here represent the "all institutions" group-the overall summary of all weighted stratificataion cell counts.

Table A1
Number of Institutional and Student Participants in the CIRP Freshman Surveys, 1966-1990

## The 1990 Student Information Form

PLEASE PRINT (one letter or number per box)

## DIRECTIONS

Your responses will be read by an optical mark reader. Your careful observance of these few simple rules will be most appreciated.

- Use only black lead pencil (No. 2 is ideal).
- Make heavy black marks that fill the oval.
- Erase cleanly any answer you wish to change.
- Make no stray markings of any kind.

EXAMPLE:
Will marks made with ballpoint or felt-tip marker be properly read? Yes... $\odot$ No...

| صـ | PLEASE PROVIDE YOUR SOCIAL SECURITY NO. | Mark here if directed |  |

3. Are you a twin? (Mark one)
$\begin{array}{ll}\text { No } \ldots \bigcirc & \text { Yes, identical. . } \bigcirc \\ & \text { Yes, fraternal.. } \bigcirc\end{array}$
4. In what year did you graduate from high school? (Mark one)

| 1990.......... $\bigcirc$ | Did not graduate but |
| :---: | :---: |
| 1989.......... | passed G.E.D. test . $\bigcirc$ |
| $1988 . . . . . . . . . \bigcirc^{*}$ | Ne |
| 1987 or earlier. . | high school ....... $\bigcirc$ |

5. Are you enrolled (or enrolling) as a: (Mark one) Full-time student? . . 0 Part-time student? . . $\bigcirc$
6. How many miles is this college from your permanent home? (Mark one)

$$
\begin{array}{rrr}
5 \text { or less } \bigcirc & 11-50 \bigcirc & 101-500 \bigcirc \\
6-10 \bigcirc & 51-100 \bigcirc & \text { Over } 500 \bigcirc
\end{array}
$$

7. What was your average grade in high school?
(Mark one)

| $A$ or $A+O$ | $B O$ | $C O$ |
| ---: | ---: | ---: |
| $A-O$ | $B-O$ | $D O$ |
| $B+O$ | $C+O$ |  |

## 1990 STUDENT INFORMATION FORM

## Dear Student:

The information in this form is being collected as part of a continuing study of higher education conducted jointly by the American Council on Education and the University of California at Los Angeles. Your voluntary participation in this research is being solicited in order to achieve a better understanding of how students are affected by their college experiences. Detailed information on the goals and design of this research program are furnished in research reports available from the Higher Education Research Institute at UCLA. Identifying information has been requested in order to make subsequent mail follow-up studies possible. Your response will be held in the strictest professional confidence.

9. During high school (grades 9-12) how many years did you study each of the following subjects? (Mark one for each item)
 Mathematics Foreign Language .......○○○○○○○ Physical Science .......○○○○○○○ Biological Science.......○○○○○○○ History/Am. Govt.......○○○○○○○ Computer Science .....○○○○○○○ Arts and/or Music ..... $\bigcirc 0 \bigcirc 0000$
10. Prior to this term, have you ever taken courses for credit at this institution?

## OYes ONo

11. Since leaving high school, have you ever taken courses at any other institution?

| (Mark all that apply |  |  |
| :--- | :---: | :---: |
| in each column) | For <br> Credit | Not for <br> Credit | in each column) Credit Credit

Sincerely,
Alexander W. Astin, Director Higher Education Research Institute
14. To how many colleges other than this one did you apply for admission this year?

| No other | 10 | 30 | $5 \ldots \ldots .0$ |
| :---: | :---: | :---: | :---: |
| 0 | 20 | $4 \bigcirc$ | 6 or more. $\bigcirc$ |

15. What is the highest academic degree that you intend to obtain?
(Mark one in each column)

## None

Vocational certificate
Associate (A.A. or equivalent)
Associate (AA. or equivalent ...... $\bigcirc$..
Bachelor's degree (BA, BS, etc.) ....
Master's degree (MA, MS, etc
Ph.D. or Ed.D. .
M.D., D.O., D.D.S., or D.V.M.

LL.B., or J.D. (Law)
B.D. or M.DIV. (Divinity).

## Other

16. Is English your native language?

QYes $\quad$ No
17. Are you a:

No . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . $\sigma$ Yes, at a junior or comty. college . . © . . . . . $\odot$ Yes, at a 4-yr. college or university . $\bigcirc \ldots .$. Yes, at some other postsecondary school (For ex., technical, vocational, business). $\qquad$
12. Where do you plan to live during the fall term? (Mark one)
With parents or relatives . . . . . . . . . . . . . . . . . . $\odot$
Other private home, apt. or rm.
College dormitory
Fraternity or sorority house
Other campus student housing.
Other
$\ldots$
13. Is this college your: (Mark one)
 choice? .......
Q.S. citizen
$\bigcirc$ Permanent resident (green card)
$\bigcirc$ Neither
18. Are your parents: (Mark one) Both alive and living with each other? Both alive, divorced or separated? One or both deceased?
19. How would you describe the racial composition of the high school you last attended and the neighborhood where you grew up?

## (Mark one in each row)

 High school I last attended.

Neighborhood where I
grew up $\qquad$
$\qquad$
Neither

Third choice?

24. For the activities below, indicate which ones you did during the past year. If you engaged in an activity frequently, mark ©. . If you engaged in an activity one or more times, but not frequently, mark (Q) (occasionally). Mark (N) (Not at all) if you have not performed the activity during the past year.

Participated in organized
demonstrations............... (®)(N)
Won a varsity letter for sports .... (©) (O) (N)
Failed to complete a homework
assignment on time.......... (5)(ㅇ) (®)
Tutored another student......... (ㄷ) (ㅈ) (®)
Did extra (unassigned) work/
reading for a class $\ldots \ldots \ldots \ldots$ (ㅌ) (1) (N)
Studied with other students ..... (E) (O) (N)
Was a guest in a teacher's home. . (®) (O) (1)
Smoked cigarettes ................ (®) (1) (1)
Drank beer . . . . . . . . . . . . . . . . . . . . . (®) (®) (1)
Drank wine or liquor ............. (®) (®)
Stayed up all night. . . . . . . . . . . . . (D) (ब) (1)
Spoke a language other than
English at home ............... © (ㄷ) (®)
Felt overwhelmed by all I had to do. ©(®) ©
Felt depressed.................... (B) (1) (N)
Studied in the library ............ ©® ©
Performed volunteer work ....... © (®) (N)
Visited an art gallery or museum. $\oplus(\mathbb{\infty}$
Took vitamins .................... © (®) (N)
Came late to class $\ldots \ldots \ldots \ldots$. © (®) (®)
Wore glasses or contact lenses... (E) (N)
Played a musical instrument ..... (®) (1)
Checked out a book or journal
from the school library ......... ©®®
Asked a teacher for advice
after class (®)® (1)
25. Rate yourself on each of the following traits as compared with the average person your age. We want the most accurate estimate of how you see yourself.
(Mark one in each row)
Academic ability .......... $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ Artistic ability.............. $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ Competitiveness .......... ООООО Cooperativeness .......... ○○○○○ Drive to achieve............ $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ Emotional health ........... ○○○○○ Leadership ability ......... ○○○○○ Mathematical ability ........ $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ Physical health ........... $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ Popularity . ................ ○○○○○

Popularity with the
opposite sex
Public speaking ability .... $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ Self-confidence (intellectuall. $\bigcirc \bigcirc \bigcirc \bigcirc$ Self-confidence (sociall. .... ○○○○○ Understanding of others.... $0000 \bigcirc$ Writing ability.
26. What is your best estimate of your parents' total income last year? Consider income from all sources before taxes. (Mark one)
Less than $\$ 6,000$
© $\$ 35,000-39,999$
$\$ 6.000-9,999 \quad \$ 40,000-49.999$
$\$ 10,000-14,999 \quad \$ 50,000-59,999$
$\$ 15,000-19,999 \quad \bigcirc \$ 60,000-74,999$
\$20,000-24,999 $\bigcirc \$ 75,000-99,999$
$\$ 25,000-29,999 \quad \$ 100,000-149,999$
$\$ 30,000-34,999 \quad \$ 150,000$ or more
27. What is the highest level of formal education obtained by your parents?
(Mark one in each column) Father Mother Grammar school or less ..... ©......
Some high school
High school graduate $\qquad$ O...... 0

Postsecondary school
other than college ........ $\bigcirc \ldots .$.
Some college $\ldots . . \ldots . . .$.
College degree ............... $0 . \ldots .$.
Some graduate school ...... O......
Graduate degree
28. During high school, I:
(Mark any that apply)
Was elected president of one or more student organizations
Received a high rating in a state
or regional music contest
Competed in a state or regional
speech or debate contest .......... 0
Had a major part in a play...$\ldots \ldots$....
Won an award in an art competition....
Edited a school publication............ 0
Had original writing or poetry
published
O
Won an award in a state or
regional science contest.
Was a member of a scholastic honor society
29. In deciding to go to college. how important to you was each of the following reasons?
(Mark one answer for each possible reason)

My parents wanted me to go.... (1) (S) (1)
I could not find a job .......... (1) (5) (N)
Wanted to get away from home. . (D) (S) (1)
To be able to get a better job..... (1) (S) (N)
To gain a general education and appreciation of ideas
(v) (ธ) (N)

To improve my reading and
study skills.
(1)(ㄷ)

There was nothing better to do $\ldots$ (D) (5) (N)
To make me a more cultured
person.
(1) (5) (1)

To be able to make more money. . () (S) (I)
To learn more about things
that interest me
(1)(5) (1)

To prepare myself for graduate
or professional school
(v)(5) (1)

31．Mark one in each row：The Federal government is not doing enough to protectAgre SomewharThe Federal government is not doing enough to control environmental pollution．．．．．（4）（3）（2）（1）The Federal government should raise taxes to reduce the deficit ．．．．．．．．．．．．．．．．．．．．（4）（3）（1）（1）There is too much concern in the courts for the rights of criminals（4）（3）（1）
Abortion should be legal（4）（3）（2）（1）

32．During your last year in high school，how much time did you spend during a typical week doing the following activities？

Hours per waek
 Studying／homework ．．OO○○○○○○ Socializing with friends． 00000000 Talking with teachers
outside of class．．．．．．OOOOOOOO Exercising／sports ．．．．○○○○○○○○ Partying Working（for pay）．．．．． 00000000 volunteer work ．．．．．． $0 \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc 0 \bigcirc$ Student clubs／groups ． $00 \bigcirc 00000$ Watching Tv．．．．．．．．．．○○○○○○○○

33．Which of the following are important to you in your long－term choice of career occupation？
（Mark one in each row）
Job openings generally available．©（1）（S）（N）
Rapid career advancement possible．©（D）（S）（®）
High anticipated earnings ．．．．．．．（®）（®）（N）
Well－respected or prestigious occupation．
．．（®）（®）（N）
Great deal of independence ．．．．．（E）（®）（N）
Chance for steady progress ．．．．．（©）（©）（S）（N）
Can make an important
contribution to society ．．．．．．．．（E）（S）（N）
Can avoid pressure ．．．．．．．．．．．．．（E）（B）（S）（1）
Can work with ideas．．．．．．．．．．．．．（©）（©）（S）
Can be helpful to others ．．．．．．．．．（©）（1）（S）（Q）
Able to work with people ．．．．．．．．（©）（1）（S）（1）
intrinsic interest in the field．．．．．（©）（1）（S）（1）
The work would be challenging ．．（©）（D）（S）（1）

34．Below are some reasons that might have influenced your decision to attend this particular college．How important was each reason in your decision to come here？（Mark one answer for each possible reason）

My relatives wanted me to come here．（จ）（S）（ब）
My teacher advised me
（©）（1）
This college has a very good

> academic reputation............... (⿴囗) (®) (⿴囗大

This college has a good reputation
for its social activities $\ldots . . \ldots \ldots$ ．（D）（S）（N）
I was offered financial assistance．．．．．（I）（S）（N）
This college offers special
educational programs
（1）（®）
This college has low tuition ．．．．．．．．．．（©）（S）（N）
My guidance counselor advised me．．．（1）（S）（1）
I wanted to live near home．．．．．．．．．．（ㅈ）（S）（1）
A friend suggested attending．．．．．．．．．（D）（S）（N）
A college rep．recruited me $\ldots \ldots \ldots$ ，（S）（N）
The athletic department recruited me．．（D）（S）（1）
This college＇s graduates gain admission
to top graduate／professional schools．（©）（S）（1） This college＇s graduates get good jobs．．（ब）（5）（1）
I was attracted by the religious affilia－ tion／orientation of the college．．．．．．（D）（S）（1）
I wanted to go to a school about the size of this college ．．．．．．．．．．．．（®）（S）（®）
35．How would you characterize your political views？（Mark one）

26. Below is a list of different undergraduate major
fields grouped into general categories. Mark only fields grouped into general categories. Mark only

39. The Higher Education Research Institute at UCLA actively encourages the colleges that participate in this survey to conduct local studies of their students. If these studies involve collecting follow-up data, it is necessary for the institution to know the students' ID numbers so that follow-up data can be linked with the data from this survey. If your college asks for a tape copy of the data and signs an agreement to use it only for research purposes, do we have your permission to include your ID number in such a tape?

Yes $\bigcirc \quad$ No $O$
The remaining ovals are provided for items specifically designed by your college rather than the Higher Education Research Institute. If your college has chosen to use the ovals, please observe carefully the supplemental directions given to you.

## Qualifications in Assessing Trends

## Appendix D

## Qualifications in Assessing Trends

In any multi-year survey research project such as the CIRP, change to the survey instrument is inevitable. A question's text may be changed to more accurately elicit the information desired, or to elicit slightly different information. Different formats or arrangements of the questions may be tried out. The commonly-accepted meanings of the words in a question may change over time. In a few cases, question texts, formats, or order have even been changed inadvertently.

While such changes have, on the whole, been of benefit to the CIRP, they can raise problems in consistency when viewed over the 25 -year span of this report. Accordingly, each of the 400 -odd items have been evaluated for each year in which it occurs to determine whether year-to-year changes reflect actual changes in the population or are artifacts of the way in which the question was asked.

In many cases where we judged the results to be severely contaminated by such artifacts, the special symbol "[*]" was placed in the report, indicating that data was collected for that item, but was judged to be incomparable to results from other years.

In other cases, however, the effect may not have been severe, or may have been confined to one or two responses in an item. This appendix identifies these cases. Please note that in discussing these possible anomalies, the possibility still exists that they were actually due in whole or in part to an actual change.

## Career

The career variable was changed substantially in the period 1973-1975. The 48-response option set was replaced by a $62-$ response set, some of which were not directly comparable with the original. The original response set was restored in 1976. The effect is most pronounced for aggregated careers in education.

## MAJOR

Until 1971, students were asked to mark their first, second, and last choices for major. Starting in 1972, students were directed to mark the major they were most likely to choose. Since
students prior to 1972 were not likely to select "undecided" as first, second, or last choice, the "undecided" response option showed a substantial increase between 1971 and 1972.

Nine response categories, including specific business and education categories, were added in 1973. "Pre-med, dental, veterinary" was removed from the response set in 1973 and restored in 1977. Additional response categories were added in 1978, 1980, and 1982.

## RELIGION

Changes were made in the response set in a number of years, primarily switching from a "short" list (five responses) to a "long" list (17-18 responses). When the short list was used, "Protestant" and "other" represented two of the five options (the others being Roman Catholic, Jewish and none). When the long list was used, "Protestant" represented the sum of all Christian religions other than Roman Catholic, while "other" represented the sum of Buddhist, Moslem (or Islamic) and Other Religion.

It appears that many non-Catholic Christians don't identify their religion as "Protestant." In the years when a short list was used, the percentage of "Protestants" dropped substantially, matched by an increase in the percentage of "other religion." The short list was used in 1972, 1979-83 and 1985.

In 1984, two long-list "Protestant" religions (Episcopal and Presbyterian) were inadvertently left off the list. They were restored in 1985. A 1984 rise in the "other Protestant" response, followed by a drop in 1985, can most probably be attributed to this change in the list. The "Unitarian-Universalist" religion was dropped as of 1985.

## High School Grades

The format of the response options was changed in 1973 and again in 1987. In both instances, the original format was restored the following year. The grades most affected by this format change were $\mathrm{B}-$ and $\mathrm{C}+$.

## ESTIMATED PARENTAL INCOME

Due to inflation, it became necessary to change the response set for this item several times. Each change resulted in some artifactual effects on the data as compared to the previous year. In addition, from 1966-1972, students were allowed to enter their own family income if they were not dependent on their parents. The elimination of this option undoubtedly resulted (at least partially) in the drop in the low-income families observed in 1973.

In 1985, to accommodate a finer discrimination among income ranges at the high end of the spectrum, it was necessary to compress the low-end ranges. Specifically, the six ranges formerly representing incomes of less than $\$ 15,000$ were replaced by three. This change had a
slight effect on the percentage of low-income families between 1984 and 1985, but virtually no effect on the median parental income for those two years.

## FINANCIAL AID

Some version of the financial aid question has been asked since the beginning of the Freshman Survey in 1966. It was not until 1978, however, that the various items presented and the response sets were sufficiently standardized to allow their inclusion in this report. A re-ordering of the aid items in 1984 (in which items were grouped by personal, grant or loan sources) may have had some small effects on the results.

## MISCELLANEOUS

On a number of occasions, year-to-year comparability of results based on items dealing with opinions, projected future activities or perceived goals and values, many have been adversely affected by changes in the order of their presentation, changes in the text of the item itself or the addition/deletion of other items. These include:
-Student opinions between 1971-75, 1975-76 and 1986-87.
-Goals and values between 1972-74, 1986-87. Almost all of the goal and value items were dropped from the 1988 results due to extensive order changes and item deletions, resulting in severe contamination of the results.
-Reason for choosing freshman college between 1972-73 and 1982-83.
-Future activities between 1975-77.
-Self-ratings between 1986-87. all 1983 responses were dropped from the report because the response options were not comparable to any other year.
-Will need remedial work between 1977-78.

## Appendix E

## The Precision of the Normative Data and Their Comparisons

## Appendix E

## The Precision of the Normative Data and Their Comparisons

One of the most common questions asked about CIRP data is our estimate of the standard error, which is normally reported in "plus or minus x percentage points." Using traditional methods of calculating standard error, the percentages reported would be estimated as being accurate within one-tenth of one percent (see Table E1). Since we report our results to the accuracy of $0.1 \%$, it would appear that every change from year to year, no matter how small, is statistically significant. There are three primary reasons why this appearance is somewhat misleading:

1) Traditional methods of computing standard error are based on the assumption that the sample being used was randomly selected from an infinite population. The CIRP Norms sample is derived from students attending a group of institutions that voluntarily chose to participate in the CIRP. In addition, while every effort has been made to maximize the comparability of the institutional sample from year to year (repeat participation runs about 90 percent), comparability is reduced somewhat by non-repeat participation and year-to-year variation in the quality of data collected by continuing institutional participants. This institutional form of "response bias" undoubtedly introduces an unknown amount of non-random variation in the results from year to year.
2) The wording of some questions in the survey instrument, the text and number of response options and the order of their presentation have changed over the years. We have found that even small changes can have a disproportionate effect on the results. While the trend data found in this report have been carefully examined to remove results which have clearly been contaminated by these considerations, some variations caused by order and context effects can still be observed (see Appendix D).
3) Substantial changes in the stratification cell scheme were made in 1968, 1971 and 1975, including the inclusion of cells for historically black colleges, public and private universities, and the use of selectivity levels. These changes resulted in corresponding changes to the weights applied to individual institutions over the period 1966-1975, giving them greater or lesser influence over the national normative results. (Although there have been changes to the stratification cell assignments of individual institutions since 1975, the scale of these changes in
relation to the national normative results are quite small in comparison to other sources of bias).

Instead of relying on the standard error as a measure of changes in the trends, we recommend that observed trends be judged in large part on their consistency. Any result which undergoes a consistent change over three or more years can reasonably be assumed to reflect a real change in the national population of entering freshmen. A change from one year to the next, no matter how large, which is not maintained in following years, may well represent an artifact of the sort described above.

Table E1
Standard Errors of Categorical Response Percentages for Norms Groups of Various Sizes ${ }^{\text {a }}$

| Number of Actual Participants <br> in a Norms Groups | Standard error |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $1 \%$ or $99 \%$ | $10 \%$ or $90 \%$ | $25 \%$ or $75 \%$ | $50 \%$ |
| 2,500 | .199 | .600 | .866 | 1.000 |
| 5,000 | .141 | .424 | .612 | .707 |
| 7,500 | .115 | .347 | .500 | .577 |
| 10,000 | .100 | .300 | .433 | .500 |
| 25,000 | .063 | .190 | .274 | .316 |
| 50,000 | .044 | .134 | .194 | .224 |
| 75,000 | .036 | .110 | .158 | .183 |
| 100,000 | .031 | .095 | .137 | .158 |
| 150,000 | .026 | .077 | .112 | .129 |
| 175,000 | .024 | .071 | .104 | .120 |

${ }^{\text {a }}$ Assumes simple random sampling of students from an infinite population.
${ }^{\text {b }}$ To determine 1990 populations counts, please Appendix A, Table A3, column 2.

|  | Statistician; Other. |

# Higher Education Research Institute/CIRP 

## Current Publications List

October, 1991

## The American College Teacher (\$12.00) <br> National Norms for the 1989-90 HERI Faculty Survey <br> Provides an informative profile of teaching faculty at American colleges and universities. Teaching, research activities and professional development issues are highlighted along with issues related to job satisfaction and stress. December, 1990/ 104 pages.

## The Black Undergraduate ( $\$ 8.00$ )

Current Status and Trends in the Characteristics of Freshmen This study examines changes in the characteristics of black college freshmen during the past two decades. A wide variety of characteristics of black college freshmen are considered in the study: family background, academic experience in high school, reasons for attending college, finanical aid, choices of majors and careers, expectations for college, self-concept, values, autitudes, and beliefs. August, 1990/22 pages.

Predicting College Student Retention (\$8.00)
Comparative National Data from the 1982 freshman class.
A practical guide for colleges interested in using registrar's data to predict student retention. Focus is on the entering freshmen class of 1982 using results from the 1986 Follow-up Survey. March, 1989/110 pages.

## The American College Student

Provides information on the college student experience two and four years after college entry. Student satisfaction, talent development, student involvement, changing values and career development, and retention issues are highlighted along with normative data from student responses to the HERI Follow-up Surveys.

```
1988 report: Normative data for }1984\mathrm{ and 1986
    freshmen. August, 1990/210 pages $15.00
1987 report: Normative data for 1983 and 1985
    freshmen. Sept., 1989/130 pages $15.00
1985 report: Normative data for }1981\mathrm{ and }198
    freshmen. March, 1989/44 pages $14.00
```

## The American Freshman: <br> Twenty-Five Year Trends (\$25.00)

Provides trends data for entering freshman classes on selected items of the CIRP survey from 1966-1990. The report highlights academic skills and preparation, demographic trends, high school activities and experiences, education and career plans, and student attitudes and values. September, 1991/192 pages.

## The Courage and Vision to Experiment

Hampshire College 1970-1990
Summarizes the results of a study of Hampshire College, an experimenting liberal arts institution located in Amherst, Massachusetts. Through an analysis of alumni outcomes, the report emphasizes how the lessons learned from the innovative approach used at Hampshire can be translated to the higher education community at large. January, 1991/190 pages.

## The American Freshman: National Norms

Provides national normative data on freshman responses to the annual freshman survey. Please check the year you wish to receive:

| Year | Price | Year | Price |
| :--- | :--- | :--- | :--- |
| 1966 | $7.50-$ | 1979 | $7.50-$ |
| 1967 | $7.50-$ | 1980 | $7.50-$ |
| 1968 | $7.50-$ | 1981 | $7.50-$ |
| 1969 | $7.50-$ | 1982 | $7.50-$ |
| 1970 | $7.50-$ | 1983 | $8.25-$ |
| 1971 | $7.50-$ | 1984 | $8.25-$ |
| 1972 | $7.50-$ | 1985 | $8.50-$ |
| 1973 | $7.50-$ | 1986 | 12.95 (out of stock) |
| 1974 | $7.50-$ | 1987 | $15.00-$ |
| 1975 | $7.50-$ | 1988 | $17.00-$ |
| 1976 | $7.50-$ | 1989 | $19.00-$ |
| 1977 | $7.50-$ | 1990 | $19.00-$ |
| 1978 | $7.50-$ |  |  |

    Additional copies of this report may be purchased from the Higher Education Research Institute, Graduate School of Education, 320 Moore Hall, University of California, Los Angeles, CA 90024-1521. Please remit $\$ 25.00$ with your order.

[^1]:    ${ }^{1}$ Another possible interpretation is that changes in financial aid policy and more selective admissions guidelines have worked to exclude poorer-and less well prepared-students, thus resulting in the relative increase of A to C students we see in the late 1980s.

[^2]:    ${ }^{2}$ The part-time employment item was changed in 1987, making direct comparisons to earlier years impossible.

[^3]:    * This section is adapted from a forthcoming article by Alexander W. Astin, "The changing American college student: Implications for educational policy and practice," to be published in Higher Education. Portions have also been adapted from an earlier article in Change (Astin, A.W. "Competition or cooperation," September/October 1987).

[^4]:    [1] Text, order or number of response options may vary from year to year.

[^5]:    [1] Data collected in disaggregated form but not reported in 1966-1976.

[^6]:    [1] Data collected in disaggregated form but not reported in 1966-1976.

[^7]:    [] Resulls were not comparable to those of other years due to changes in question text or order
    [1] Text, order or number of response oplions may vary from year to year.

[^8]:    [1] Text, order or number of response options may vary from year to year.

[^9]:    ${ }^{1}$ For stratification purposes, a university is defined as an institution that offers doctoral degrees. • Institutions that offer postbaccalaureate programs but do not offer doctoral degrees are considered four-year colleges.

[^10]:    ${ }^{1}$ Black colleges are also included in the appropriate four-year college or university norm group according to their type.
    ${ }^{2}$ Includes those institutions with unknown selectivity. NOTE: The weighted counts may not always sum to identical totals due to rounding error.

[^11]:    a Participation in the ACE-UCLA Cooperative Institutional Research Program (CIRP) for a given year is indicated by an "@" or an "X." Insitutions providing data judged to be representative of their firsttime, full-time freshman class and included in the national norms report are indicated by an "@." Campuses that participate in the survey but whose data were not included in the norms report are noted by an "X." Participation for 1989 is shown for those institutions that had submitted their data in time to be included in this publication.
