THE AMERICAN FRESHMAN: NATIONAL NORMS FOR FALL 2006

This is the forty-first annual report of national normative data on the characteristics of students attending American colleges and universities as first-time, full-time freshmen.

This series, initiated in Fall 1966, is a project of the Cooperative Institutional Research Program (CIRP), a continuing longitudinal study of the American higher education system housed at the Higher Education Research Institute (HERI) in the Graduate School of Education & Information Studies at the University of California, Los Angeles. During the past 41 years, the CIRP has generated an array of normative, substantive, and methodological research about a wide range of issues in American higher education. Recent publications provide a summary of the long-term trends generated by these data for college students (see Astin, Oseguera, Sax, & Korn, 2002; Sax, 2003; Allen, Jayakumar, Griffin, Korn, & Hurtado, 2005). The survey instrument (see Appendix B) is revised annually to reflect the changing concerns of the academic community and of others who use the information.

The data reported here are weighted to provide a normative profile of the American freshman population for use by individuals engaged in policy analysis, human resource planning, campus administration, educational research,

and guidance and counseling. The data are also useful to the general community of current and future college students, their parents, and college faculty.

A major purpose of the CIRP is to provide initial input information for longitudinal research. HERI annually conducts two additional CIRP surveys that enable institutions to follow up on their Freshman Survey respondents: Your First College Year (YFCY), which surveys students at the end of the first year of college, and the College Senior Survey (CSS), which surveys students during their last year in college. Longitudinal follow-up studies of CIRP students have been used in major studies of science students (Hurtado, Han, Saenz, Espinosa, Cabrera & Cerna, 2007), retention (Astin & Oseguera, 2002), community service and citizenship (Sax, 2004; Vogelgesang & Astin, 2000), institutional transformation (Astin, Keup, & Lindholm, 2001), first-year adjustment (Keup & Stolzenberg, 2004), the science pipeline (Sax, 1994, 2001), diversity in higher education (Hurtado, 2006; Chang, Denson, Saenz, & Misa, 2006; Gurin, Dey, Hurtado, & Gurin, 2002), and large-scale studies of student development (Astin, 1993).

The normative data presented here are reported separately for men and for women, and

for 26 different institutional groupings. The major stratifying factors are institutional race (predominantly black, predominantly white), control (public, private-nonsectarian, Roman Catholic, other religious), type (university,

four-year college), and “selectivity level” of the institution. (A complete discussion of the CIRP survey methodology, stratification scheme, and weighting procedures is presented in Appendix A.)

AN OVERVIEW OF THE 2006 FRESHMAN NORMS

The 2006 freshman norms are based on the weighted responses of 271,441 first-time, full-time students at 393 of the nation's baccalaureate colleges and universities. These data have been statistically adjusted to reflect the responses of the 1.3 million first-time, full-time students entering four-year colleges and universities as freshmen in 2006.

This year marks the 41st anniversary of the Cooperative Institutional Research Program's (CIRP) Freshman Survey, which was first administered in 1966. This spring, the Higher Education Research Institute (HERI) will release a monograph that details the changes in the American Freshman over the last 41 years. The following narrative highlights the main findings for 2006.

Interest in Politics Increases as Students Move Politically from Center

For today's freshmen, discussing politics is more prevalent now than at any point in the past 41 years. More freshmen report that they discussed politics frequently as high-school seniors, moving up 8.3 percentage points to 33.8 percent in 2006 from 25.5 percent in 2004, the last time this question was asked. This increased interest in politics among freshmen is illustrated by the mid-term elections of November 2006 and what has been reported as

the largest voter turnout in 20 years by voters under 30 years of age (Szep, 2006).

When asked to characterize their political views, 43.3 percent of college freshmen identified as "middle-of-the-road," dropping 1.7 percentage points from 2005 to the lowest value since this was first measured by the CIRP in 1970. Both "liberal" (28.4 percent) and "conservative" (23.9 percent) each increased by 1.3 percentage points from 2005 (an increase of 16,900 students nationally). Not only is the percentage of students identifying as "liberal" at the highest level since 1975 (30.7 percent), but the percentage identifying as "conservative" is at the highest point in the history of the Freshman Survey. This indicates that freshmen are moving away from a moderate position in their political viewpoints.

In addition to being asked about their political ideology, incoming freshmen were asked if they agreed or disagreed with various statements concerning social and political issues. The issue that shows the greatest change from 2005 to 2006 is a decrease in support that "the federal government should do more to control the sale of handguns," down from 78.7 percent in 2005 to 73.8 percent in 2006. At the same time, fewer freshmen agree that "there is too much concern in the courts for the rights of criminals," moving from 57.9 percent in 2005

to 55.9 percent in 2006, the lowest this figure has been since 1975.

Greater support for gay rights is also evident among this year's entering freshmen. More students agree that "same sex couples should have the right to legal marital status" in 2006, at 61.2 percent, than in 2005, when that figure was 57.9 percent (an increase of 3.3 percentage points). Another question regarding student's opinions on the denial of rights to homosexuals garners little support, with only 25.6 percent agreeing that "it is important to have laws prohibiting homosexual relationships," a drop of 1.8 percentage points from 27.4 percent in 2005.

Liberals and Conservatives Divide on Gay Rights, But Not on Affirmative Action

While the majority of freshmen support gay rights, this issue also divides students along ideological lines. In fact, the issue that most

divides conservative and liberal freshmen is whether or not "same-sex couples should have the right to legal marital status." While 4 out of 5 (83.7 percent) liberals agree that same-sex couples should have this right, only 30.4 percent of conservatives believe the same. The middle-of-the-road freshmen are slightly more likely to hold points of view that are closer to the liberals than the conservatives on this issue at 63.0 percent. A similar discrepancy emerges when looking at who agrees that it is "important to have laws prohibiting homosexual relations." Although 48.5 percent of conservatives agree, only 11.0 percent of liberals do so. As with the other gay rights issue, the middle-of-the-road students tend to agree more with liberal students, with 22.8 percent agreeing with the statement.

Abortion is another polarizing issue. While 78.4 percent of liberal freshmen agree that "abortion should be legal," only 31.8 percent

Figure 1. Attitudes on Gay Rights

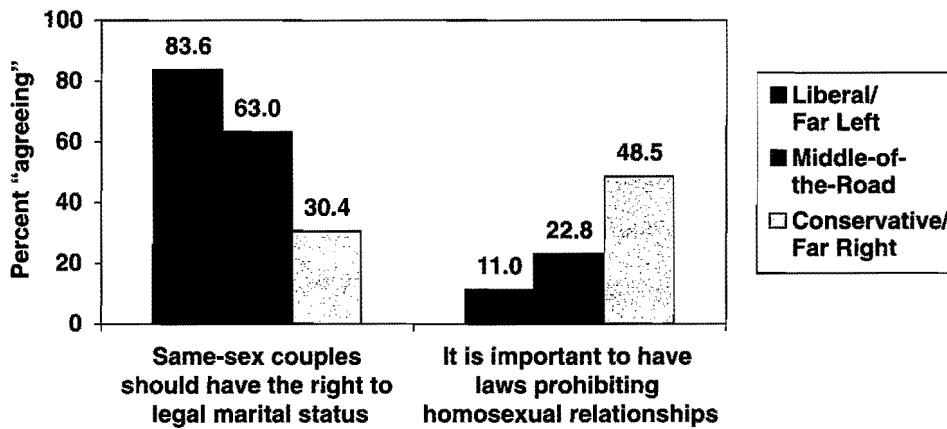

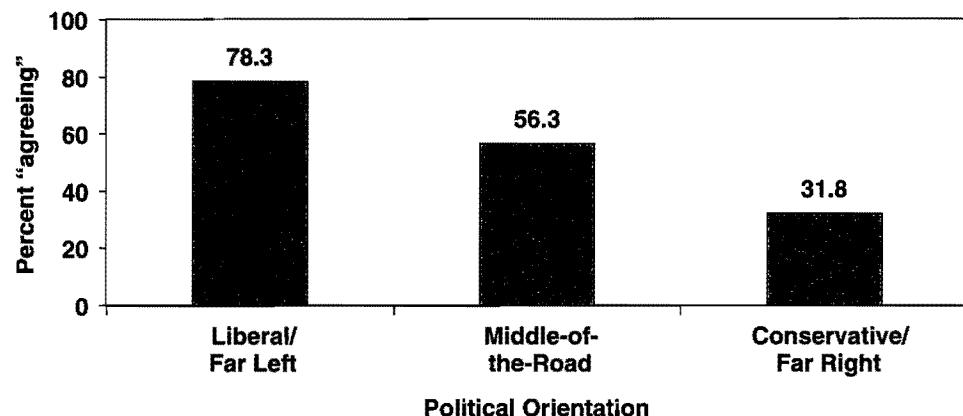

Figure 2. Abortion Should Be Legal

of conservative students do so. Middle-of-the-road freshmen are truly close to the middle here, at 56.3 percent.

Abolishing the death penalty (liberals agree, at 48.0 percent, versus 22.5 percent of conservatives), legalizing marijuana (liberals, 52.5 percent versus conservatives, 23.5 percent), and supporting a national health plan (liberals, 83.9 percent versus conservatives, 57.0 percent) are also issues that show noticeable differences along ideological lines.

Interestingly, there is not much of a difference between liberals and conservatives on the issue of affirmative action in college admissions. Usually seen as a conservative issue, only 52.7 percent of conservative freshmen

agree that affirmative action in college admissions should be abolished. However, 44.6 percent of liberals also believe affirmative action in college admissions should be abolished.

In two of the twenty-one issues examined in the 2006 CIRP Freshman Survey we see very little difference between liberals and conservatives. Both liberals and conservatives agree in similar proportions that "dissent is a critical component of the political process" (liberals, 66.1 percent, compared to 63.2 percent of conservatives). When asked if "realistically, an individual can do little to bring about major changes in our society," liberals agree at 25.3 percent, as do 26.5 percent of conservatives.

Concerns about College Finances

Two out of three (64.1 percent) students indicate that they have “some” or “major” concerns regarding their ability to finance the costs of their college education. The good news is that the percentage of students who report no concerns increased by 1.8 percentage points and the percentage of students who report major concerns decreased by 1.6 percentage points compared to 2005. The bad news is that a majority of the respondents indi-

cate that they have financial concerns. This is particularly true for students coming from families with lower incomes. While 23.8 percent of freshmen from families with incomes of less than \$50,000 have major concerns about financing college, a far lower percentage of families with incomes between \$50,000 and \$100,000 have major concerns, at 11.0 percent. Those with incomes greater than \$100,000 are least likely to have major concerns (3.2 percent).

Financial Decisions Impacting College Choice

Fewer freshmen are attending their first-choice institution, as this item is at its lowest level since 1988 (66.7 percent). In 2006, this figure has dropped to 67.3 percent from 69.8 percent in 2005. As the following graph illustrates, almost half of the freshmen attending their second choice institutions also had been accepted to their first choice colleges.

The CIRP Freshman Survey contains 20 questions on what influenced the student's choice to attend her or his particular college. The results illustrate that while financial concerns are not the most important considerations for those attending first-choice institutions, students attending less-than-first-choice institutions view financial concerns as more important.

For students attending their first choice institution, the top five important reasons influencing that decision are academic reputation,

graduates getting good jobs, a visit to the campus, school size, and good social reputation. Looking at the same issues for those students attending a second choice institution, we see that the campus visit and social reputation drop off the top five and are replaced by two financial issues: being offered financial assistance and the cost of the college that was chosen. For the third choice college, not being able to afford the first choice is tied for fifth place. For those attending their less-than-third choice, not being able to afford their first choice becomes an even more important reason.

Fewer freshmen who are attending their first-choice college report that the cost of attending their particular college was a very important consideration (29.1 percent) than those attending their second choice (37.4 percent) and third choice (40.4 percent) colleges.

Students who were accepted to their first-choice institutions but chose not to attend are

more likely to report that financial concerns were important in choosing where they ultimately matriculated. Roughly one-third (34.0 percent) of those who were admitted and did not attend first choice schools report that they could not afford their first choice. Approximately one in five (20.7 percent) who did not go to their first choice had not received aid from that institution. The cost of attending college was important for more of those not attending their first choice (48.4 percent) than

those who were attending their first choice (29.1 percent).

Increased Reliance on Paid Work While in College to Help Meet College Costs

Consistent with previous years, aid for the first year of college from "parents, other relatives, or friends" is a substantial source, with 82.2 percent of freshman reporting that they received at least some aid from these sources. There is, however, a slight decrease in the

percentage of freshman using savings from summer work to help pay college costs compared to 2000 (the last year in which these expanded aid categories were examined). In addition, more students reported that they received aid from other savings (38.3 percent), up 6.3 percentage points. More students are relying on work to cover costs, as those anticipating a “part-time job on campus” increases 3.2 percentage points to 29.0 percent, a “part-time job off campus” increases 2.4 percentage points to 24.3 percent, and “full-time job while in college” more than doubles, from 2.7 percent in 2000 to 4.7 percent in 2006.

Racial/Ethnic Differences in Advanced Placement Course-Taking and Exams

An increasing number of freshmen indicate that they took at least one Advanced Placement (AP) course or AP exam in high school. In 2006, 61.6 percent indicated they took at least one AP course, which is up from 59.3 percent

when we first began asking this question five years ago. Only 6.3 percent of freshmen entering four-year colleges report that their high school did not offer AP courses. Though somewhat fewer students actually take an AP exam, which can provide an opportunity to gain credit for college courses, this number is increasing at a faster rate—51.0 percent report taking at least one AP exam, a percentage that is up from 45.0 percent among 2001 freshmen.

Table 3 shows distinct differences by race/ethnicity among students taking AP courses and exams. Black students are more likely than other groups to report that their high school did not offer AP courses (7.4 percent). Almost half report taking at least one AP course (49.8 percent) but only 38.6 percent report taking AP exams. In contrast, 73.1 percent of Asian American/Pacific Islanders report taking at least one AP course and nearly two thirds (65.7 percent) took one or more AP exams in high school. At the high end of course rigor, Asian

Americans are more than twice as likely to report taking more than five AP courses in high school than Black students. These differences have implications for successful admission to the most competitive colleges.

Commitment to Service Continues and Civic Concerns are Highest at HBCUs

Last year we reported a significant increase in commitment to service among American freshmen—presumably due to natural disasters such as Hurricane Katrina that marshaled national attention on local and global communities in need of assistance. It appears this was not a one-time phenomenon. Slight increases continued a trend in student interest in civic commitment and social responsibility.

Significantly higher proportions of freshmen with civic concerns appear to attend particular types of institutions. Approximately two-thirds (66.7 percent) of all freshmen report that “helping others in difficulty” is a “very important” or “essential” personal goal.

Three-quarters (75.0 percent) of students attending public and 79.0 percent of students attending private historically black colleges and universities (HBCUs), however, report they highly value this personal goal. More than half (52.7 percent) of students attending HBCUs also indicate “becoming a community leader” is an “essential” or “very important” goal compared with 35.2 percent of students attending all baccalaureate-granting institutions. Student desire to “influence social values” also continues on an upward trend and is at its highest point since 1993. While 42.5 percent of all students indicate that this is an important value, larger proportions of students at HBCUs indicate that this is the case: 60.9 percent of students at private and 56.1 percent of students at public HBCUs. Overall student responses on many of these items are at the highest point in 10–12 years. It should be noted that students could be unsure how to enact these personal goals, as only about 11.3 percent of all students indicated the

Racial Composition of High School and Neighborhood

For many students, coming to college provides a first opportunity to interact with socio-economically and racially/ethnically diverse peers, as high schools and neighborhoods have become more racially and socio-economically segregated (Frankenberg et al., 2003; Orfield & Eaton, 1996; Orfield & Gordon, 2001; Massey et al. 2003). For many freshmen, college offers the first opportunity they might have to interact meaningfully with diverse peers.

The 2006 CIRP Freshman Survey reintroduced two questions about the racial composition of the high school students last attended and the neighborhood where they grew up. These questions had been previously asked three other times between 1983 and 1990, and the trends results will be further highlighted in the Forty Year CIRP Trends report (forthcoming, 2007). Students could characterize their high schools or neighborhoods on a scale ranging from “all” or “mostly” non-White to half-and-half to “all” or “mostly” White.

In 2006, 64.0 percent of entering freshmen report that their high school was all or mostly White, while slightly more students, 73.6 percent, report the same of the neighborhoods

where they grew up. On the other end of the scale, only 13.1 percent of students report that their high school was all or mostly non-White, and 14.2 percent of students report this about their neighborhoods. Students who attend all or mostly white high schools tend to live in all or mostly white neighborhoods, this in spite of an increasingly diversifying pool of students within the high school age population (NCES, 2006). In addition, slightly more men (66.0 percent) report attending “all” or “mostly” White high schools than women (62.3 percent).

Schools and neighborhoods are increasingly segregated along both racial and socio-economic lines, and the evidence of this intertwining is most apparent when breaking out the results along both dimensions. Among students that report an annual family income of less than \$30,000, well over one-third (36.0 percent) report that their neighborhood was all or mostly non-White compared to only 6.2 percent of their peers in the \$100,000 or more income range. Similarly, among students in the lowest income range, 29.4 percent report that their high school was all or mostly non-White compared to only 7.3 percent of students in the highest income range. For students at the highest income level, nearly five in six (84.2 percent) report having grown up in a neighborhood that was all or mostly White, a significantly higher proportion than almost every other category displayed in this table.

Note: White refers to students of Caucasian descent; non-White refers to students from any racial/ethnic group other than White; Half & Half refers to half non-White and half White. Asian/Pacific Islanders are two separate groups that have been collapsed for purposes of this table. Latina/o includes Mexican American, Puerto Rican, and other Latinos.

Differences are also evident when examining these results along racial/ethnic lines. Almost 9 out of every 10 (87.2 percent) White students report that they grew up in a neighborhood that was all or mostly White, while 74.6 percent attended a high school with this same profile. Meanwhile, just over half (56.9 percent) of Black students report that they grew up in a neighborhood that was all or mostly non-White, while 41.4 percent attended a high school with this profile. Asian/Pacific Islanders and Latinas/os are more evenly distributed among the three racial composition categories

in terms of their last high school attended. Compared to the two prior peer groups, Asians/Pacific Islanders and Latinas/os tend to report growing up in more integrated neighborhoods. In particular, 45.6 percent of Asians/Pacific Islanders report that they grew up in an all or mostly White community, while 41.5 percent of Latinas/os report the same. Close to two-thirds of students in the other race (66.5 percent) and Native American (64.9 percent) categories also report growing up in an all or mostly White neighborhood, results that closely mirror those for the total sample.

Some scholars (Braddock, 1980; Trent, 1997) have noted in their research that college-bound students from more racially integrated high schools and neighborhoods are likely to seek out similar environments in their college choice, and that the converse is true as well. We examine these relationships in the current data, employing an aggregated race/ethnicity variable to determine the “per institution” percentage of White students within each incoming freshman cohort. This “per institution” ratio serves as a referent group with which to gauge the structural “diversity” of a student’s chosen institution, a formula utilized in prior research (Chang, 1999).

Table 6 describes the mean percentage of White students in an incoming freshman cohort compared across racial composition of a student’s high school and neighborhood.

Within the normative sample, the mean percentage of White students per institution for the entering freshman cohort is 67.0 percent, a figure that serves as a reference point to compare other student characteristics. For example, among students that attended an all or mostly non-White high school, the mean percentage of White students at their chosen institution is 49.0 percent, while the mean percentage for students from all or mostly White high schools is 72.1 percent. Similarly, for students that grew up in an all or mostly non-White neighborhood, the mean percentage of White students at their chosen institution is 48.5 percent, while the mean percentage for their peers from all or mostly White neighborhoods is 71.9 percent.

These descriptive results indicate that students from all or mostly non-White high

schools and neighborhoods are significantly more likely than their counterparts to choose colleges that are more racially diverse as measured by the percentage of White students within the institution's entering freshman class. Moreover, the percentage levels for students from all or mostly non-White high schools and neighborhoods are well below the national average (67.0 percent), a finding that corroborates prior research on this topic (Braddock,

1980; Trent, 1997). This further highlights how pre-college settings that are more racially integrated can influence students towards attending more racially and ethnically diverse higher education institutions. This is a critical point to understand within the current policy debates over desegregation in our K-12 schools as well as ongoing diversity efforts within our higher education institutions.

NOTES

These notes refer to report items that are followed by numbers in [brackets].

- [1] Percentages will add to more than 100.0 if any student marked more than one category.
- [2] Recategorization of this item from a longer list is shown in Appendix C.
- [3] Based on the recommendations of the National Commission on Excellence in Education.
- [4] Percentage responding “frequently” only. Results for other items in this group represent the percentage responding “frequently” or “occasionally.”
- [5] Comparisons with results from previous years should be made with caution due to changes in the structure of this item.

NOTES

These notes refer to report items that are followed by numbers in [brackets].

- [1] Percentages will add to more than 100.0 if any student marked more than one category.
- [2] Recategorization of this item from a longer list is shown in Appendix C.
- [3] Based on the recommendations of the National Commission on Excellence in Education.
- [4] Percentage responding “frequently” only. Results for other items in this group represent the percentage responding “frequently” or “occasionally.”
- [5] Comparisons with results from previous years should be made with caution due to changes in the structure of this item.

DEVELOPING THE NATIONAL NORMS

The data reported here have been weighted to provide a normative picture of the American college freshman population for persons engaged in policy analysis, human resource planning, campus administration, educational research, and guidance and counseling, as well as for the general community of students and parents. This Appendix provides a brief overview of the CIRP methodology and describes the procedures used to weight the annual freshman survey results to produce the national normative estimates.

HISTORICAL OVERVIEW

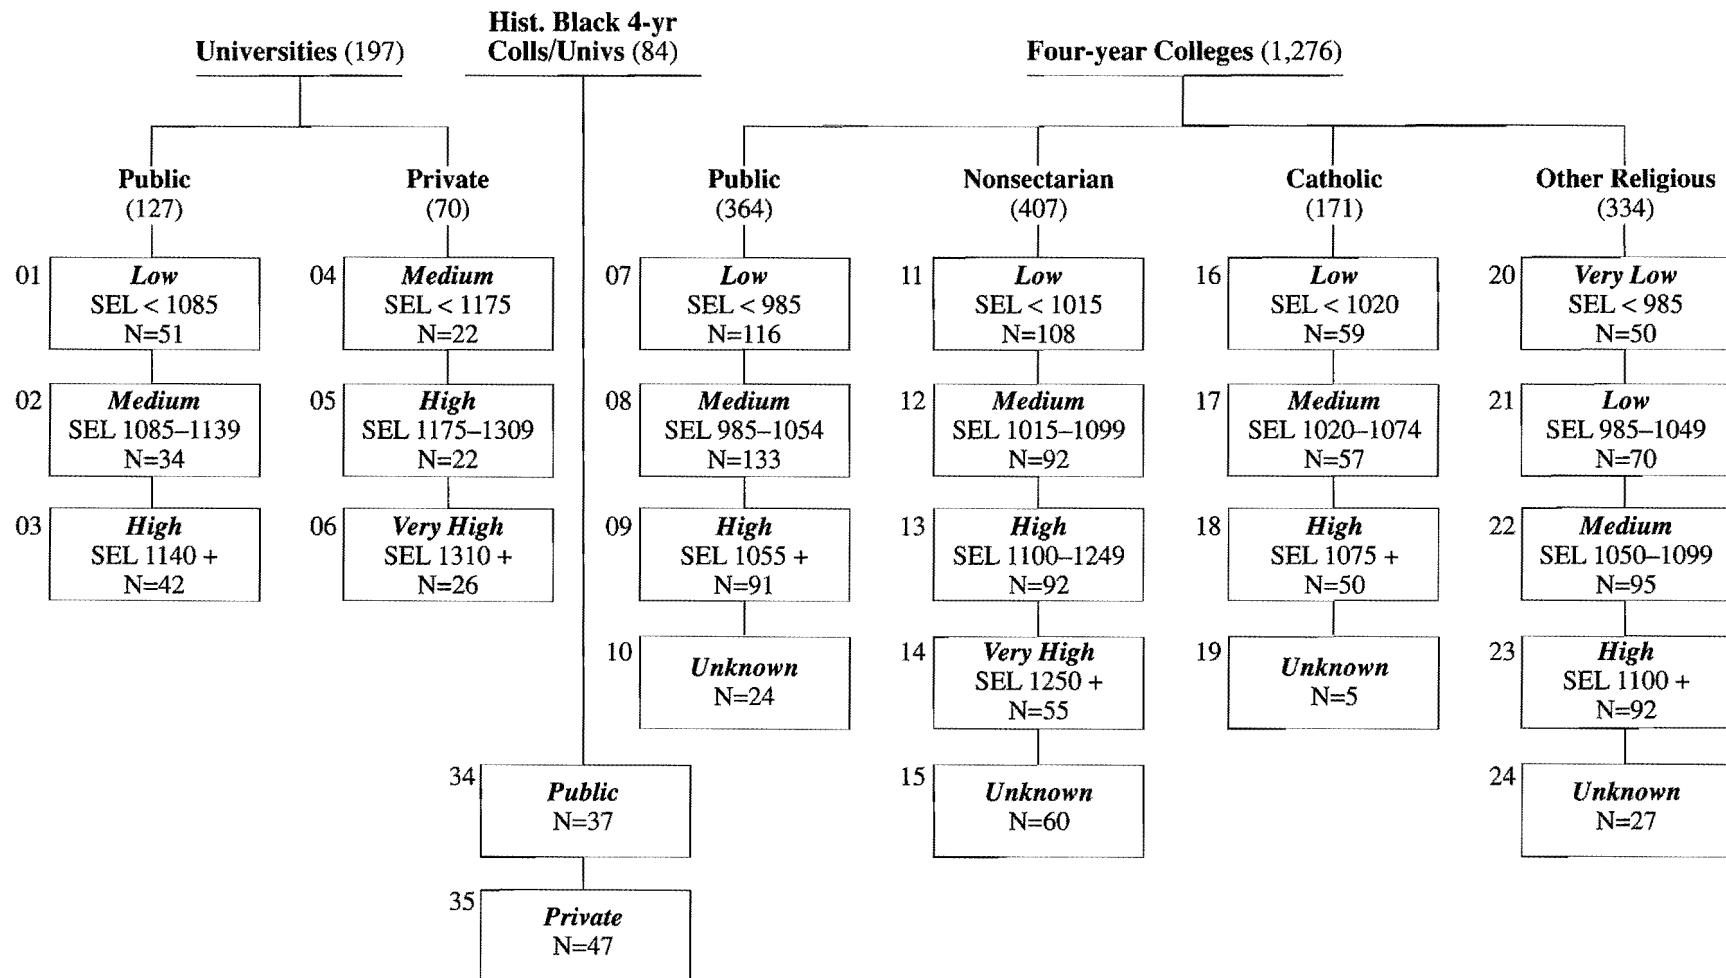

From 1966 to 1970, approximately 15 percent of the nation's institutions of higher education were selected by sampling procedures and invited to participate in the program. As the academic community became aware of the value of program participation, additional institutions asked to participate. Beginning in 1971, all institutions that have entering freshman classes and that respond to the U.S. Department of Education's (DOE) Higher Education General Information Survey were invited to participate (see 'The National Population' below). A minimal charge plus a unit rate based on the number of forms processed help to defray the direct costs of the survey. In Fall 1974 and 1975, samples of proprietary institutions also participated in the survey.

THE NATIONAL POPULATION FOR 2006

For the purposes of the 2006 CIRP, the population has been defined as all institutions of higher education admitting first time freshmen and granting a baccalaureate-level degree or higher listed in the Opening Fall Enrollment (OFE) files of the U.S. Department of Education's Higher Education General Information Survey (HEGIS, since 1986 known as IPEDS—Integrated Postsecondary Education Data System). An institution is considered eligible if it was operating at the time of the HEGIS/IPEDS survey and had a first-time full-time (FTFT) freshman class of at least 25 students. In addition, a small number of institutions or their branches are included even though their separate enrollments were not available from the OFE files, because they were part of prior HEGIS/IPEDS populations and are known to be functioning with FTFT students. The 2006 population figures were obtained from the on-line OFE Survey for Fall 2005. In 2006, the national population included 1,557 institutions.

Selectivity (SEL), used to define strata for four-year colleges and universities, is an estimate of the mean score of entering freshmen on the Verbal plus Mathematical portions of the Scholastic Aptitude Test (or the converted SAT Math and Verbal equivalents from the American College Test composite). The method of estimation is described in detail in Astin and Henson (1977).

The stratification design presented here is used to group schools to develop population weights and should not be used as a measure of institutional or program quality.

It should be noted that the population reflects institutions of “higher education,” rather than “postsecondary education.” Most proprietary, special vocational, or semi-professional institutions are not included in the population. Beginning with the Fall 1993 survey, only institutions with regional accreditation (including provisional accreditation) were included.

INSTITUTIONAL STRATIFICATION DESIGN

The institutions identified as part of the national population are divided into 26 stratification groups based on institutional race (predominantly non-black, predominantly black), type (four-year college, university¹), control (public, private nonsectarian, Roman Catholic, and other religious²) and the “selectivity level” of the institution. Selectivity, defined as the average composite SAT score of the entering class, was made an integral part of the stratification design in 1968. The selectivity figures were revised and updated in 1975, and again in 2001. Figure A1 shows the distribution of institutions across the 26 stratification cells.

It should be noted that the dividing lines between low, medium, and high selectivity levels are different for different types of institutions, as shown in the table below.

Dividing Line Between	Universities				Four-year institutions							
	Public		Private		Public		Nonsectarian		Catholic		Oth. Relig.	
	SAT V+M	ACT	SAT V+M	ACT	SAT V+M	ACT	SAT V+M	ACT	SAT V+M	ACT	SAT V+M	ACT
Low–Medium	1085	22.9	—	—	985	20.2	1015	20.9	1020	21.0	1050	22.0
Medium–High	1140	24.3	1175	25.4	1055	22.2	1100	23.2	1075	22.6	1100	23.2
High–Very High	—	—	1310	28.8	—	—	1250	27.2	—	—	—	—

Changes in stratification assignment do occur; institutional requests for review are honored each year. Appendix D lists the current stratification cell assignment of all institutions that have participated in the CIRP freshman survey since 1966.

Having defined the population in terms of the stratification cell scheme, the OFE file is used to compute the male and female FTFT population in each cell. These population counts form the target counts of the weighting procedure.

¹ For stratification purposes, we define a “university” as an institution that awards a certain minimal number of earned doctoral degrees. Institutions that offer postbaccalaureate programs but do not award a sufficient number of doctoral degrees are considered four-year colleges. The stratification design presented here is used to group schools to develop population weights and should not be used as a measure of institutional or program quality.

² This type of institution was labeled “Protestant” in publications prior to 2000. “Other Religious” more correctly characterizes the institutions that have always been in this group, which include all institutions affiliated with a religion other than Roman Catholic.

IDENTIFYING THE NORMS SAMPLE

Generally speaking, an institution is included in the National Norms sample if it provided a representative sample of its FTFT population. The minimum percentage required of a sample is based on the type of institution from which it was collected. For four-year colleges, the minimum is 85 percent, while for universities, the minimum is 75 percent. Institutions whose sample proportions were less than but close to these cutoffs are included if the method used to administer the survey showed no systematic biases in freshman class coverage.

Information about the FTFT population and the method of survey administration is obtained from participating institutions at the time they return their completed surveys. In the event an institution did not return FTFT information, counts from the most recent OFE survey are used. This procedure, although not optimal, is adequate, unless the institution experienced a substantial change in its FTFT population since the last HEGIS/IPEDS survey.

THE 2006 DATA

Although 391,544 respondents at 614 colleges and universities³ returned their forms in time for their data to be included in the 2006 norms, the normative data presented here are based on responses from 271,441 FTFT freshmen entering 393 baccalaureate institutions.

The normative data presented here were collected by administering the 2006 Student Information Form (SIF) during registration, freshman orientation, or the first few weeks of classes (i.e., before the students have had any substantial experience with college life). The SIF is designed to elicit a wide range of biographic and demographic data, as well as data on the student's high school background, career plans, educational aspirations, financial arrangements, high school activities, and current attitudes. In addition to standard biographic and demographic items that have been administered annually to each entering class, the SIF also contains other research-oriented items that may have been modified from previous years (e.g., see the list of attitudinal questions listed under item #32, Appendix B). The inclusion of modified items permits a more thorough coverage of student characteristics but also represents a compromise between two mutually exclusive objectives: (1) comparability of information from year to year which is required for assessing trends; and (2) flexibility in item content to meet changing information and research needs. Table A1 lists the 2006 SIF items and indicates previous survey years in which comparable items have been used.

³Including 5,110 respondents attending 18 two-year colleges. As of 2000, two-year colleges are no longer included in the normative data. See "The American Freshman: National Norms for Fall 2000."

The SIF, reproduced as Appendix B, has been developed in collaboration with students, professional associations, participating institutions, government agencies, educational researchers, administrators, policy makers, and members of the CIRP Advisory Committee. It is designed for self-administration under proctored conditions and for processing onto magnetic tape with a mark reflex reader. The SIF content is reviewed annually by the CIRP project staff, with the assistance of the CIRP Advisory Committee as well as others interested in the annual freshman survey program.

Four data files are developed from the SIF each year: (1) an institutional summary file containing institutional identification numbers and an institutional summary of the responses for men and women; (2) a file containing individual responses and independent student identification numbers, but no names and addresses; (3) a name-and-address file containing a second set of independent student identification numbers; and (4) a "link" file containing *only* the two independent identification numbers. This last file is maintained under an elaborate system developed to ensure strict confidentiality of individual student data and to protect against misuse of the name-and-address file (Astin & Boruch, 1970).

Those data from institutions meeting minimal quality requirements for inclusion in the 2006 norms (above) were differentially weighted to represent the population of entering freshmen at all higher educational institutions in the United States (see 'Weighting the Sample' below). Part-time students and those who are not first-time college students (i.e., transfers and former enrollees) were excluded from the normative sample. Since the 1972 survey, special care has been taken to define these enrollment statuses; in surveys before 1972, the participating institutions were asked to exclude part-time students, while non-first-time students were excluded during the data processing stage by screening out those who indicated that they had previously attended college. Since that time, all students who did not identify themselves as part-time were included in the national norms if they either graduated from high school in the year of the survey or had never attended any post-secondary institution.

WEIGHTING THE SAMPLE

Those institutions identified as being part of the Norms sample are weighted by a two-step procedure. The first weight is designed to adjust for non-participation within institutions. Counts of the male and female FTFT population for each institution are divided by that institution's male and female FTFT respondent count. The resulting weights, when applied to each respondent, bring the male and female respondent counts up to the corresponding counts for the population at that institution.

[2] Categories within types are based on selectivity—the average SAT composite score of the entering class.

The second weight is designed to compensate for non-participating institutions within each stratification cell. The weighted male and female counts for all participating institutions in each stratification cell are first summed, and then are divided into the national male and female FTFT counts for all institutions in that stratification cell, producing a second set of (“cell”) weights. (The last two columns of Table A2 show the final weights that were applied to the 2006 data.) The final weight is simply the product of the first and second weights.

Weighting each respondent using this final weight brings the male and female counts for each stratification cell up to the corresponding national counts for all institutions in that stratification cell.

COMPARISON GROUPS

Weighted data are combined separately to form various comparison (or norms) groups. Most norms groups are hierarchically organized, allowing participating institutions to compare their results at different levels of specificity. A college assigned to stratification cell #14, for example, can compare its results with the following five norms groups (in declining order of specificity):

- Private nonsectarian four-year colleges, very high selectivity
- All private nonsectarian four-year colleges
- All private four-year colleges
- All four-year colleges
- All baccalaureate institutions

Table A3 shows the 2006 distribution of schools and respondents across the 32 norms groups printed in the annual *American Freshman* report, as well as a summary of distribution by national region. The weighted results reported here represent the “all baccalaureate institutions” group—the overall weighted summary based on all 271,441 respondents whose institutions were included in the national norms.

Participation in the Cooperative Institutional Research Program for a given year is indicated by an “@” or an “x.” Institutions providing data judged to be representative of their first-time full-time freshman class and included in the national norms report are indicated by an “@.” Campuses that participate in the survey but whose data were not included are indicated by an “x.” Institutions that did not participate in a given year are indicated by a “-.”

Note: Strat Cells with the values 25-29 or 36 refer to public two-year colleges.

Strat Cells with the values 30-33 or 37 refer to private two-year colleges.

Appendix E

The Precision of the Normative Data and Their Comparisons

A common question asked about sample surveys relates to the precision of the data, which is typically reported as the accuracy of a percentage “plus or minus x percentage points.” This figure, which is known as a confidence interval, can be estimated for items of interest if one knows the response percentage and its standard error.

Given the CIRP’s large normative sample, the calculated standard error associated with any particular response percentage will be small (as will its confidence interval). It is important to note, however, that traditional methods of calculating standard error assume conditions which, as is the case with most real sample survey data, do not apply here. Moreover, there are other possible sources of error which should be considered in comparing data across normative groups, across related item categories, and over time. In reference to the precision of the CIRP data, these concerns include:

- 1) Traditional methods of calculating standard error assume that the individuals were selected through simple random sampling. Given the complex stratified design of the CIRP, where whole institutions participate, it is likely that the actual standard errors will be somewhat larger than the standard error estimates produced through traditional computational methods. In addition, while every effort has been made to maximize the comparability of the institutional sample from year to year (repeat participation runs about 90 percent), comparability is reduced by non-repeat participation and year-to-year variation in the quality of data collected by continuing institutional participants. While the CIRP stratification and weighting procedures are designed to minimize this institutional form of “response bias,” an unknown amount of non-random variation is introduced into the results.
- 2) The wording of some questions in the survey instrument, the text and number of response options, and their order of presentation have changed over the years. We have found that even small changes can produce large order and context effects. Given this, the *exact* wording and order of items on the survey instrument (which is produced as Appendix B) should be examined carefully prior to making comparisons across survey years.
- 3) Substantial changes in the institutional stratification scheme were made in 1968, 1971, 1975, and 2000. These changes resulted in a revision of the weights applied to individual institutions between 1966 and 2006. Stratification cell assignments of a few institutions may also change from time to time, but the scale of these changes and their effect on the national normative results are likely to be small in comparison to other sources of bias.

Since it is impractical to report statistical indicators for every percentage in every CIRP norms group, it is important for those who are interested to be able to estimate the precision of the data. Toward this end, Table E1 provides estimates of standard errors for norms groups of various sizes and for different percentages,¹ which can be used to derive confidence interval estimates.

For example, suppose the item we are interested in has a response percentage of 18.7 percent among students at all nonsectarian four-year colleges (a normative group that is about 48,000 in size). First, we choose the column that is closest to the observed percentage 18.7—in this case “20.”² Next, we select the row closest to the unweighted sample size of 48,000—in this case “50,000.” With a sample size of about 50,000 and a percentage that is close to 20, the estimated standard error would be .179.

To calculate the confidence interval at the 95% probability level, we multiply the estimated standard error by the critical value of t for the unweighted sample size (which, for all CIRP norms groups, will be equal to 1.96 at the .05 level of probability).³ In this example, we would multiply the estimated standard error of .179 by 1.96, which yields .350. If we round this figure to a single decimal point, we would then estimate our confidence interval to be $18.7 \pm .4$. In practical terms, this confidence interval means that, if we were to replicate this survey using the same size sample, we would expect that the resulting percentage would fall between 18.3 percent and 19.1 percent, 95 times out of 100.

Note: Assumes simple random sampling.

¹Calculated by $\sqrt{\frac{x\%(100-x\%)}{N}}$, where x is the percentage of interest and N is the population count from Table A3, column 2.

²Since the distribution of the standard errors is symmetrical around the 50 percent midpoint, for percentages over 50 simply subtract the percentage from 100 and use the result to select the appropriate column. For example, if the percentage we were interested in was 59, $100 - 59$ percent yields 41, so we would use the column labeled “40%.”

³To calculate the confidence interval at the 99% probability level, the critical t value is 2.56.

Campuses Participating in the

2006 CIRP Freshman Survey

NOTES ON THE SAMPLE REPORT

The Standard Institutional Profile Report divides students into three basic groups, depending on how they answer question numbers 4, 5, 10, and 11 on the survey (see Appendix B). These groups are:

FIRST-TIME FULL-TIME. Students enrolled full-time who either graduated from high school in the same year as entering college *or* who have had no previous college experience.

FIRST-TIME PART-TIME. Students enrolled part-time who either graduated from high school in the same year as entering college *or* who have had no previous college experience.

NOT FIRST-TIME. Full- or part-time students who have had some college experience since graduating from high school.

The first section of a standard Institutional Profile Report (entitled “Total First-Time Full-Time”) includes FIRST-TIME FULL-TIME students *only*. The first three columns summarize the results by gender for students attending the institution. The remaining six columns summarize results by gender for students in two comparison groups of increasing breadth (in the case of the sample, these are “public universities of high selectivity” and “all public universities”).

The second section of the Report (entitled “Standard Breakouts,” not included in this Appendix) includes results by gender for the FIRST-TIME PART-TIME and NOT FIRST-TIME (labeled “Transfer” on the report) groups, as well as results for all three groups combined. There are no comparative results displayed on this report, as the Higher Education Research Institute does not compute National Normative figures for FIRST-TIME PART-TIME or NOT-FIRST TIME students.

Degree Attainment Rates at American Colleges and Universities

Provides latest information on four- and six-year degree attainment rates collected longitudinally from 262 baccalaureate-granting institutions. Differences by race, gender, and institutional type are examined. The study highlights main predictors of degree completion and provides several formulas for calculating expected institutional completion rates. The study also provides a section on trends in degree attainment in the last decade.

January, 2005/88 pages \$15.00

The American Freshman

Provides national normative data on the characteristics of students attending American colleges and universities as first-time, full-time freshmen. In 2006, data from approximately 300,000 freshmen students are statistically adjusted to reflect the responses of 1.3 million students entering college. The annual report covers: demographic characteristics; expectations of college; degree goals and career plans; college finances; attitudes, values and life goals.
