## INTRODUCTION

The past year saw intensified discussion about almost everything connected with higher education, but especially the increasing cost of attending college and the worth of a college degree, graduation rates, what the impact of the massive open online course (MOOC) will be, and various takes on "disruption." While many differing viewpoints are espoused, one certainty is that well-conducted and relevant educational research is necessary. The Higher Education Research Institute (HERI) is a leading source of such information, and the past year saw a variety of research published using CIRP data, some of which we highlight below.

The 2011 HERI Faculty Survey results were released this year in our monograph entitled "Undergraduate Teaching Faculty: The 20102011 HERI Faculty Survey." This was the first year in which stress related to economic issues, such as institutional budget cuts and personal finances, rivaled top sources of stress (selfimposed expectations and lack of personal time) from past HERI Faculty Surveys. The report also examined the role of part-time faculty on campus, showing that many feel they lack access to key institutional resources. We also addressed student-centered teaching methods, such as cooperative learning and student presentations, which continue to be used at an increasing rate, but differ in their use by discipline and other factors. Planning is currently underway for the 2013-2014 HERI Faculty Survey.

The Spring 2012 issue of AAC\&U's Liberal Education focused on diversity and civic
learning, including an article by HERI Director Sylvia Hurtado and CIRP Assistant Director for Research Linda DeAngelo that used multiple CIRP datasets. In one instance, combining CIRP Freshman Survey data with matched data from the Your First College Year (YFCY) Survey, the authors looked at two CIRP Constructs: Habits of Mind (traits associated with academic success) and Pluralistic Orientation as outcomes in the first year of college. The article provides evidence of the impact of college programs and student experiences on academic, diversity, and civic outcomes taken from a series of research projects at HERI. Along the way it demonstrated the ability of CIRP surveys to be powerful tools to assess progress along multiple areas that matter to colleges and universities.

Extending HERI's previous studies on graduation rates, in a white paper commission by the Gates Foundation, Pryor and Hurtado (2012) examined the incoming characteristics of "mobile completers": those students who graduate with a bachelor's degree, but not at the institution at which they first started college. The authors found that "mobile completers" were similar to those students who completed degrees at their initial college ("stayer completers") in many areas, but were similar to those that left and did not obtain a degree anywhere else in terms of considering the cost of attending college as an important factor. They were also more likely to have chosen first institutions that had a larger percentage of students who intended, upon entry, to transfer to another institution.

Gayles, Rockenbach, and Davis (2012) combined 2000 CIRP Freshman Survey data with the follow-up 2003 College Students Beliefs and Values Survey (CSBV) in a study of 3,680 students at 46 institutions. The CSBV was part of a larger multi-year longitudinal project at HERI that led to the recent book, "Cultivating the Spirit: How College Can Enhance Students' Inner Lives" (Astin, Astin, \& Lindholm, 2011). Gayles et al. used structural equation modeling to look longitudinally at student-athletes' social activism goals and charitable involvement. The authors found that student-athletes were not statistically different from non-student-athletes in their goals to help promote racial understanding and to become community leaders, among other survey items used to measure social activism goals. Student-athletes, however, have greater time constraints which may inhibit their abilities to enact those goals, as they were found to be less involved in charitable activities such as volunteering.

Chang, Eagan, Lin, and Hurtado (2011) examined racial stigmas and persistence of underrepresented minorities in the biomedical and behavioral sciences, using matched data from the CIRP Freshman Survey and the Your First College Year Survey. They found that
underrepresented minority first-year students who experienced higher levels of negative interactions were less likely to persist in the biomedical and behavioral sciences.

Looking at 2005 Freshman Survey data, Sax, Riggers, and Eagan (2013) used multilevel modeling to measure levels of academic engagement of an incoming cohort of women students, taking into account the type of high school these women attended. They found that women who had attended single-sex high schools versus schools that are coeducational were more likely to be academically engaged, measured by actions such as interactions with teachers, tutoring other students, and being involved in student organizations.

Additional articles recently published using CIRP data include Park and Eagan's (2011) study looking at students who were more likely to enroll in college early due to early action and early decision admissions programs; and Bowman, Brandenberger, Hill, and Lapsley's (2011) longitudinal study examined the effect of students' engagement with racial/cultural diversity on personal growth. In addition, Santos, Hurtado, Sáenz, and Cabrera (in press) examine incoming Latina/o students' financial concerns and trends in access.

## THE AMERICAN FRESHMAN: NATIONAL NORMS FALL 2012

In this year's CIRP Freshman Survey, the 47th annual administration, we see an increased impact of the global economic situation, most importantly on the benefits incoming students see of attending college and considerations in deciding which college to attend. Reflecting interests in increasing college graduation rates, the 2012 survey added new questions that provide interesting information on how incoming students understand and take account of such issues. In the wake of the federal elections, we compare political and social views of first-year students in 2012 with the cohort entering four years ago in 2008.

The results of this monograph are based upon data from 192,912 first-time, full-time students entering 283 four-year colleges and universities of varying levels of selectivity and type in the United States. These data have been statistically weighted to reflect the approximately 1.5 million first-time, full-time first-year students entering 1,613 four-year colleges and universities across the country in 2012. This means differences of one percentage point in the results published here reflect the characteristics, behaviors, and attitudes of roughly 15,000 first-year students nationally. A complete discussion of the CIRP Freshman Survey methodology, stratification scheme, and weighting procedures is presented in Appendix A.

## Increased Impact of Economics

More students in 2012 believe that the current economic situation significantly affected their college choice, rising to $66.6 \%$ in 2012 from $62.1 \%$ two years earlier when we first asked the question.

Incoming students persist in putting a premium on job-related reasons to go to college. Continuing to rise is the importance of going to college in order to get a better job, which rose two percentage points this year to an all-time high of $87.9 \%$, up from $85.9 \%$ in 2011 and considerably higher than its low of $67.8 \%$ in 1976 (see Figure 1). In the minds of today's college students, getting a better job continues to be the most prevalent reason to go to college.

Also at an all-time high as a reason to go to college is "to be able to make more money," moving from $71.7 \%$ in 2011 to $74.6 \%$ in 2012. This is now the fourth-ranked important reason

Incoming students persist in putting a premium on job-related reasons to go to college.
to go to college, surpassing "to gain a general education and appreciation of ideas," which is now at $72.8 \%$. A related finding is that is "being very well off financially" as a personal goal rose to an all-time high in 2012, with $81.0 \%$ of incoming students reporting this as a "very important" or "essential" personal goal, up from 79.6\% in 2011.

In looking at specific important reasons for choosing the college they are attending, more students carefully considered "the cost of attending this college," which moved upwards in importance to $43.3 \%$. This is an increase of 2.7 percentage points over the 2011 figure of

Figure 1. Trends of Reasons in Deciding to go to College (\% Indicating "Very Important")

$40.6 \%$. It is also an all-time high for this item since first asked in 2004, when only $31.0 \%$ of incoming students thought that cost was "very important."

This year sees $13.4 \%$ of incoming first-year students reporting that not being able to afford their first choice was "very important" in deciding which institution to attend. This is the highest this percentage has been since we first introduced the item in 2006, when it was $9.4 \%$.

The percentage of incoming students who report that not being offered aid by their first choice was a "very important" reason in choosing where to matriculate is at an all-time high of $9.5 \%$. Although this is not markedly different from the $9.3 \%$ that we reported in 2011, this figure has more than doubled from the $4.4 \%$ who were not offered aid at their first choice in 1984, when we first asked the question.

In a related item, only $59.3 \%$ of incoming firstyear students are attending their first choice institution. This is a significant change from the 1970s and 1980s, when approximately three out of four students were attending their firstchoice institution. We continue to see a large gap between those who were accepted at their first choice, at $76.7 \%$, and those who are attending their first choice institution, $59.3 \%$, a gap of 17.4 percentage points.

## A Mismatch between Expectations and Reality of Time to Graduation

Low graduation rates in the United States have been at the forefront of the national news, debated by higher education policy makers, and of great interest to researchers, including those at the Higher Education Research Institute. Reflecting this interest, new questions on the

CIRP Freshman Survey for 2012 investigated issues related to retention. To assist in interpreting this information, we also collected the latest 4-, 5-, and 6-year graduation rate information from IPEDS on our participating schools as points of comparison.

The vast majority (84.3\%) of incoming first-year students believe that they will graduate from college in four years. This will likely only come true for approximately half of them, as they are attending schools that on average only graduate $40.6 \%$ of their students in four years.

> The vast majority (84.3\%) of incoming first-year students believe that they will graduate from college in four years. This will likely only come true for approximately half of them.

An additional $15.8 \%$ graduate by the fifth year, although only $8.6 \%$ of incoming students expect it would take five years to graduate from college. For the sixth year, although an additional 4.5\% graduate in that time, only $2.7 \%$ of first year students think that it would take that long to graduate. Clearly there is a mismatch between reality and expectations. Despite efforts to publicize individual college graduation rates, many incoming students seem to be unaware that most college students are not graduating from the college they entered in a four-year period.

Students attending private universities are the most likely to expect a five-year time to graduation, at $15.0 \%$, in contrast to $7.8 \%$ from public universities. Prospective engineering majors are

## Support for same-sex couples having the right to legal marital status is widespread amongst first-year college students, and continues to show gains.

also more likely to expect a five-year path to graduation, with almost 1 in 5 (19.1\%) anticipating the extra year. This is followed by prospective education majors, at $14.0 \%$. No other major categories are over ten percent for this item.

To further examine the relationship between college graduation rates and college choice, we introduced a new response category into the set of items that investigate how important certain reasons are in determining which college to attend. Only $30.4 \%$ of students report that "the percentage of students that graduate from this college" was "very important" in their decision to attend that college. Given the economic realities of adding an extra year of college, and that $66.6 \%$ report that the current economic situation significantly affected their college choice, there seems to be a gap in understanding the realities of the time to college completion by a fair amount of incoming students.

## Increasing Support of Same-sex Marriage

Support for same-sex couples having the right to legal marital status is widespread amongst firstyear college students, and continues to show gains. In 2012, three quarters ( $75.0 \%$ ) of all incoming first-year students support same-sex
marriage, up 3.7 percentage points from $71.3 \%$ in 2011. Support has increased tremendously since the question was first introduced on the survey in 1997 when only half ( $50.9 \%$ ) of all first-year students supported same-sex marriage. Of the ten social and political issue questions we asked on the 2012 survey, support for legalizing same-sex marriage has the highest rate of agreement among incoming college students.

As we have discussed in previous reports, there are differential levels of support between students who identify either as liberal or conservative supporting same-sex marriage, with almost twice as many liberal students expressing support compared to conservative students. Nine out of ten liberal first-year students (91.5\%) support legalization of same-sex marriage while just under half ( $47.0 \%$ ) of conservative first-year students are in support. Although the gap persists, incoming conservative first-year students continue to shift towards favoring the legalization of same-sex marriage at a fast rate, moving from $42.8 \%$ just last year to $47.0 \%$ in 2012 .

As of the most recent election, nine states have legalized same-sex marriages, most of which are in the more liberal-leaning northeast part of the United States. Accordingly, students attending colleges in the New England region are the most supportive of same-sex marriage, at $85.3 \%$. This is twenty percentage points higher than in the Southeast, where a significantly fewer (but still a majority) $65.3 \%$ of incoming first-year students support same-sex marriage.

## Changes in Students' Political Views and Orientation between 2008 and 2012

In the 2011 Freshman Survey report we examined student support for several political and social issues. Given that the U.S. just had

Figure 2. Political Orientation in 2008 and 2012, by Sex
another presidential election in November of 2012, we can now compare political and social views across two recent election years: 2008 and 2012.

We ask students both to identify their political orientation on the survey as well as to agree or disagree with specific social and political views. In one significant point of comparison, students moved towards the center in self-perceived political orientation, with the "middle-of-the-road" category growing from $43.3 \%$ in 2008 to $47.5 \%$ in 2012.

Figure 2 shows the change in political orientation for men and women from 2008 to 2012 in detail. Neither men nor women changed appreciably in identifying as "conservative" or "far right" in 2012, as roughly a quarter of incoming first-year men and one fifth of first-year women marked "conservative" or "far right" in both 2008 and 2012. By contrast, fewer men and women identified as "liberal" or "far left" in 2012 compared with 2008. The proportion of left-leaning men dropped by nearly four percentage points from 2008 to 2012 ( $30.3 \%$ in 2008 vs. $26.4 \%$ in 2012 ) while the percentage of women identifying as liberal or far left dropped by approximately five percentage points ( $37.4 \%$ in 2008 vs. $32.3 \%$ in 2012).

The consistency in the proportion of conservative-leaning students and the drop in the percentage of left-leaning students resulted in this increase of students identifying as "middle-of-the-road."

When we look at changing views regarding specific issues, however, the findings are somewhat mixed. Figure 3 shows changes in support for four political or social issues. While higher proportions of incoming students in 2012 endorsed more liberal positions in two areas (abortion and preferential treatment for disadvantaged students in college admissions), more incoming students supported a more conservative opinion in two other areas (racial discrimination and the necessity of a national healthcare plan).

Support for the position that abortion should be legal increased by 2.9 percentage points in 2012 compared to 2008, with $61.1 \%$ of incoming first-year students endorsing the legality of abortion. Much of the increase in support of abortion came from students identifying as "far right" or "conservative." Whereas $31.8 \%$ of incoming conservative students in 2008 "agreed somewhat" or "agreed strongly" that abortion should be legal, that figure jumped to $38.5 \%$ in 2012. Students in 2012 who identified as "middle-of-the-road" also increased their support for abortion by nearly five percentage

Figure 3. Support for Social and Political Views, by Year (\% Indicating "Agree Strongly" or "Agree Somewhat")

points over their peers in 2008 ( $56.7 \%$ in 2008 vs. $61.1 \%$ in 2012). Liberal students continued to support the legality of abortion at high rates ( $77.8 \%$ in 2008 vs. $79.2 \%$ in 2012).

Support for giving preferential treatment in college admissions to students from disadvantaged backgrounds increased from 2008 to 2012. Over forty percent of incoming students endorsed this position in 2012 ( $41.9 \%$ ), a 2.4 percentage point increase over 2008 (39.5\%). Middle-of-the-road ( $39.5 \%$ in 2008 vs. $42.4 \%$ in 2012) and left-leaning students ( $44.6 \%$ in 2008 vs. $50.0 \%$ in 2012) increased in their support of this issue while right-leaning students' support remained relatively stable ( $31.1 \%$ in 2008 vs. $30.1 \%$ in 2012).

A smaller proportion of incoming students in 2012 agreed that the country needed a national healthcare plan to cover everybody's medical costs. Specifically, support for a national healthcare plan dropped by 7.6 percentage points between 2008 (70.3\%) and 2012 (62.7\%). The change was most dramatic among conservative
students: although $44.8 \%$ supported national health care in 2008, this plummeted to $30.4 \%$ in 2012. Support among middle-of-the-road students dropped as well, but at a much lower rate, from $71.1 \%$ in 2008 to $64.2 \%$ in 2012. Liberal students remained largely unchanged in their high levels of support during this time period ( $85.3 \%$ in 2008 vs. $84.7 \%$ in 2012).

Students' views on racial discrimination became slightly more conservative between 2008 and 2012. In 2008, $20.1 \%$ of incoming first-year students agreed that racial discrimination was no longer a problem, and that figure increased by 2.9 percentage points in 2012 to $23.0 \%$. Right-leaning students were mostly unchanged between 2008 and 2012 in their endorsement of this position ( $30.1 \%$ in 2008 vs. $30.9 \%$ in 2012). Both middle-of-the-road ( $20.3 \%$ in 2008 vs. $23.2 \%$ in 2012) and left-leaning ( $13.3 \%$ in 2008 vs. $16.5 \%$ in 2012) became more supportive of this position over the last four years.

One of the primary issues of the 2012 presidential campaign and a contentious issue after the
election focused on the so-called "fiscal cliff" and tax reform, and Figure 4 highlights changes in students' support for the position that the wealthy should pay more taxes. Overall, support for this perspective increased by 4.2 percentage points between 2008 and 2012 ( $60.4 \%$ in 2008 vs. $64.6 \%$ in 2012). Across students' political orientation, the changes moved in different directions. Students who identified as "far right" or "conservative" declined in their support for increasing taxes on the wealthy ( $41.0 \%$ in 2008 vs. $38.1 \%$ in 2012). By contrast, this issue gained support among both middle-of-the-road and left-leaning. Specifically, roughly two-thirds ( $66.4 \%$ ) of students who identified themselves as middle-of-the-road agreed that the wealthy should pay more taxes, which represented a 6.5 percentage point increase for the same group in 2008. Additionally, more than four-in-five ( $82.4 \%$ ) left-leaning students in 2012 thought the wealthy should pay more taxes-an 8.7 percentage point increase over their left-leaning peers in 2008 (73.7\%).

Thus, although nearly half of all incoming students consider themselves as "middle-of-the-road," these middle-of-the-road students have decidedly more progressive or liberal perspectives when asked about specific social and political issues.

A final note as we discuss political orientation. A number of studies using CIRP data have pointed out that some students become more liberal in their political

Although nearly half of all incoming students consider themselves as "middle-of-the-road," these middle-of-the-road students have decidedly more progressive or liberal perspectives when asked about specific social and political issues.
orientation during college (see Astin \& Denson, 2009; Dey, 1996, 1997; Mariani \& Hewitt, 2008). Study after study concludes that any change in the political orientation that occurs among students during college is predominantly influenced by the political orientation of their fellow students, and the overall campus climate perpetuated by their peers, not by the political orientation of the faculty.

Figure 4. View that the Wealthy Should Pay More Taxes, by Political Orientation and Year (\% Indicating "Agree Strongly" or "Agree Somewhat")

## Revised Majors in 2012

We revised our list of prospective majors with the 2012 CIRP Freshman Survey, modernizing the choices offered (see Appendix E for a list of the new majors and how they map onto the old major categories). The changes of major categories were small, and mostly within the science areas (e.g., biology, from 8 majors to 12; engineering, from 8 majors to 13 ; and business, from 8 majors to 12). In general, this had exactly the effect we wanted: moving responses from "other" categories such as "other biology" or "other engineering" into the new more specific categories. As expected, there was not much change from previous years in the aggregated major categories, such as when we combined the 12 specific business majors into one category of "business."

Majoring in business continues to be the intent of the largest block of incoming first-year students, with $14.4 \%$ indicating a major in one of the 12 business majors listed. This figure has been relatively stable, in the thirteen to fifteen percentage range, since 2009, when we saw a drop from the seventeen to eighteen percentages we had seen previously.

The next two highest prospective majors are in the health professions (e.g., nursing; occupational, physical and speech therapy; etc.), at $14.1 \%$, and biological sciences ( $12.6 \%$ ). Engineering is close behind at $10.4 \%$.

## Students Following a Pre-Med or Pre-Law Track

Other new information in 2012 related to course of study is whether or not incoming students consider themselves pre-med or pre-law. Among all incoming first-year students, $19.3 \%$ conceive of themselves as pre-med and
$19.3 \%$ conceive of themselves as pre-med and 6.3\% consider themselves pre-law.
6.3\% consider themselves pre-law. Across institutional type, students entering historically black colleges and universities ( HBCU ) are the most likely to report they intend to pursue a pre-med track (22.9\%).

Approximately one-in-five (21.2\%) students at public universities conceive of themselves as pre-med, only slightly more than at private universities ( $19.1 \%$ ). This small gap essentially disappeared when comparing four-year colleges, with $17.8 \%$ of incoming students at public colleges as pre-med compared to $18.2 \%$ at private colleges.

Substantially fewer students across all institutional types report being pre-law, and this was again led by students at HBCUs, at $10.5 \%$.

Students who conceive of themselves as pre-med or pre-law are concentrated in just a few aggregated major categories. For example, Table 1 shows that the vast majority of pre-med students intend to major in the biological sciences (43.7\%) or the health professions (31.7\%). Engineering and physical sciences each attracted $3.7 \%$ of pre-med students. The remaining roughly 20\% of pre-med students intend to major in a nonscience field or marked undecided.

With respect to future occupations, pre-med students are most likely to see themselves as

Table 1. Academic Major Intentions among Pre-Med and Pre-Law Students

|  | Pre-Med | Pre-Law |
| :--- | :---: | :---: |
| Biological \& Life Sciences | 43.7 | 2.7 |
| Health Professions | 31.7 | 1.5 |
| Social Science | 5.7 | 12.7 |
| Undecided | 4.3 | 6.7 |
| Engineering | 3.7 | 2.4 |
| Physical Science | 3.7 | 0.7 |
| Other (Agriculture, Education, English, Fine Arts, Math/Computer | 3.6 | 9.0 |
| Sciences, Library Science, Other Non-technical) |  | 1.7 |
| Business | 0.9 | 18.1 |
| Arts \& Humanities | 0.4 | 5.0 |
| History or Political Science | 0.4 | 14.6 |
| Justice and Security |  |  |

physicians, at $35.7 \%$. This was followed by nurses (11.7\%), therapists (7.0\%), pharmacists $(4.8 \%)$, dentists ( $4.1 \%$ ), veterinarians ( $3.3 \%$ ), or research scientists (2.1\%).

More than a quarter of incoming pre-law students intend to major in history or political science $(26.6 \%)$ while another $18.1 \%$ indicate plans to major in business. The next most popular fields among pre-law students include justice and security ( $14.6 \%$ ) and social science (12.7\%). More than a quarter (28.0\%) of pre-law students intend to major in a number of other fields, including the sciences and arts and humanities, among others, or marked undecided.

Although 6.3\% of incoming students see themselves as pre-law, only $4.0 \%$ report that they intend their highest degree to be a J.D. Only about half of those who consider themselves pre-law actually plan on a career as an attorney or judge ( $46.8 \%$ ), with others foreseeing a related career in law enforcement ( $6.8 \%$ ) or as a policy maker or having a role in government (5.1\%). A good portion of pre-law students (11.3\%) are planning a career in business.

## Differences in Math Preparation

In 2012 we introduced a new set of items that asked about the types of math classes incoming students completed in high school. Students with stronger math preparation have significantly greater odds of earning a bachelor's degree in any field (Adelman, 2006). Pre-professional fields, such as those in pre-law and pre-med as considered above, are demanding and highly competitive, and students who arrive on campus without strong high school math preparation may find themselves having to spend time catching up to their classmates who completed more advanced math courses in high school.

Nearly all (98.0\%) indicated that they had completed Algebra II in high school, and most (81.1\%) reported having also taken pre-calculus/ trigonometry. Substantially smaller proportions of incoming first-year students report completing probability and statistics (29.4\%) or calculus (30.1\%). For Advanced Placement (AP) math classes, $15.4 \%$ of incoming first-year students report taking AP statistics and probability, and $30.0 \%$ indicate they took AP calculus in high school.

Figure 5. Type of High School Math Courses Completed, by Institutional Type

High school math preparation differed substantially depending on what types of institutions the students entered. Figure 5 shows the variation across institutional type for four math classes: pre-calculus/trigonometry, calculus, AP probability and statistics, and AP calculus. Students with the strongest levels of math preparation tend to enroll in private universities whereas incoming students with lower levels of math preparation tend to enroll in historically Black colleges and universities (HBCUs). Among those entering private universities, $91.2 \%$ had completed pre-calculus/trigonometry. This outpaced students at public universities (85.0\%) by 6.2 percentage points and students at HBCUs (63.5\%) by 27.7 percentage points.

Nearly half of all incoming first-year students at private universities (47.3\%) report completing calculus in high school, which was nearly quadruple the proportion of incoming students at HBCUs (12.6\%) and more than twice the percentage of first-year students at public four-year colleges (20.0\%). Roughly one-third ( $33.8 \%$ ) of first-year students at public universities and just more than a quarter (28.1\%)
of first-year students at private four-year colleges indicate that they had taken calculus in high school.

Similar trends emerged for AP probability and statistics and AP calculus, as almost half (48.9\%) of private university students took AP calculus in high school and nearly a quarter (23.3\%) reported taking AP probability and statistics. The proportion of first-year students attending private universities who had taken AP calculus in high school was nearly six times the percentage of incoming first-year students at HBCUs ( $8.6 \%$ ), roughly 2.5 times the proportion of students enrolling at public four-year colleges ( $18.7 \%$ ) , and more than twice the percentage of incoming students at private four-year colleges (22.2\%).

Although these data show that HBCUs enroll students with the lowest levels of math preparation, recent research by Hurtado, Eagan, and Hughes (2012) at the Higher Education Research Institute demonstrates the effectiveness of HBCUs at graduating their students in science, technology, engineering, or mathematics
(STEM) disciplines. Hurtado et al. (2012) found that Black STEM aspirants attending HBCUs have a higher probability of earning a STEM degree compared to their Black classmates at predominantly White institutions. Thus, the lower level of math preparation among incoming first-year students at HBCUs does not necessarily portend worse outcomes for these students or for these types of institutions.

STEM aspirants who take more years of high school math have significantly higher probabilities of earning a STEM bachelor's degree. Given the importance of math preparation in predicting STEM degree completion, we examined the distribution of high school math courses completed across another new variable introduced in 2012: whether students conceived of themselves as being pre-med. Figure 6 shows the percentage of incoming first-year students who report completing pre-calculus/trigonometry, calculus, and AP calculus by their self-reported pre-med status. Higher proportions of pre-med students compared to non-pre-med students completed precalculus/trigonometry, calculus, and AP calculus. There is a five-percentagepoint gap between pre-med and non-pre-med among the proportion of students completing pre-calculus/ trigonometry in high school, with $85.3 \%$ of pre-med students having completed this course compared to $80.3 \%$ of
non-pre-med students. More than a third of pre-med students (35.7\%) had completed calculus in high school, compared with 28.9\% of non-pre-med students-a 6.8 percentage point gap. The gap for AP calculus was even wider with 9.4 percentage points separating pre-med (37.6\%) and non-pre-med (28.3\%) students.

More than just gaps between pre-med and non-pre-med students, the findings in Figure 6 suggest that a significant proportion of incoming first-year students who conceive of themselves as pre-med may begin college at a disadvantage. Incoming pre-med students who did not take pre-calculus/trigonometry or calculus in high school may struggle in many introductory STEM courses, as prior preparation is one of the most important predictors of success in such courses (Eagan, Garcia, Hurtado, \& Gasiewski, 2012).

Figure 6. Type of High School Math Courses Completed, by Premed Intention

## Specific Academic Habits on the Rise

We introduced a set of behavioral items in 2007 that capture the habits of successful students in high school and in the transition to college level work. Incoming first-year students led an upward trend on a number of items in 2012. Figure 7 shows the key academic habits of highschool seniors that have been trending upward over the last five years. In 2012, students are more frequently asking questions in class ( $57.3 \%$ ), and at the same time, accepting their own mistakes as part of the learning process ( $56.3 \%$ ). Both of these habits are regarded as essential indicators that learning is occurring and that students are engaged and reflective in thinking about what they know. It is also important to note that now just over half of seniors (50.5\%) report revising their papers to improve their writing, a habit essential for college-level work. Given the variety of sources of information available on the internet, it is also gratifying to see students more frequently evaluating the
quality or reliability of information they received (41.8\%). The most significant increase over the last five years occurred among the proportion of students who look up scientific research articles and resources (rising from $22.1 \%$ in 2008 to $27.4 \%$ in 2012). Most of the increases occurred among students who report that they frequently engaged in these habits as opposed to those who occasionally did so.

## More Entering Students Felt Overwhelmed as High School Seniors

The percentage of incoming first-year students indicating that they frequently felt "overwhelmed by all I had to do" during their senior year of high school increased from $28.5 \%$ in 2011 to $30.4 \%$ in 2012, continuing an upward trend (see Figure 8). Differences between men and women also persist. The percentage of incoming first-year women who report feeling "frequently" overwhelmed is at its highest point, $40.5 \%$, since the

Figure 7. Selected Habits of Mind (\% Indicating "Frequently" or "Occasionally")

question was first asked in 1985. This is more than twice the rate of incoming first-year men (18.3\%).

We have previously reported on the upward trend in student self-ratings of traits such as academic ability and drive to achieve (Pryor et al., 2010). Unfortunately, students who report
frequently feeling over-
whelmed the year before entering college are less likely to have a positive picture of their abilities. In looking at Academic Self-Concept, a CIRP Construct that combines several survey items to provide a multifaceted measure of students' beliefs about their abilities and confidence in academic environments, we find that only one in five overwhelmed students (20.5\%) score high in Academic Self-Concept versus 29.0\% who report not feeling overwhelmed. (See Figure 9). Students who frequently felt overwhelmed are also less likely to score highly on Social SelfConcept, a construct measuring students' beliefs about their abilities and confidence in social situations. Nearly one out of four students (23.4\%) who frequently felt overwhelmed score high in Social Self-Concept, compared to 34.4\% of students who report not feeling overwhelmed. Perhaps not surprisingly, feeling frequently overwhelmed is also related to emotional health. Those who frequently felt overwhelmed in high school are much less likely to report their emotional health is in the "highest $10 \%$ " or "above average" ( $40.2 \%$ ) compared to students who do not report feeling overwhelmed (64.7\%).

Students who felt overwhelmed in high school might be on the path to continue feeling overwhelmed in college. Likelihood of Involvement is

Figure 8. Trend of "Felt Overwhelmed by All I Had to Do"
(\% Indicating "Frequently")

a CIRP Construct that measures students' expectations about their involvement in college life generally, and nearly one-third (31.9\%) of students who report feeling frequently overwhelmed score high in Likelihood of Involvement, compared to $18.6 \%$ of students who report not being overwhelmed. Depending on the types of activities they expect to be involved in, this could either ameliorate or exacerbate feelings of being overwhelmed. Involvement in college might actually be an effective way to bolster students' academic and social self-concepts as well as buffer lower levels of emotional health, if students participate in activities that research has shown are associated with academic success (Astin, 1993). Indeed, when we look at students who report frequently feeling overwhelmed, they

First-year students indicating that they frequently felt "overwhelmed by all I had to do" during their senior year of high school increased from
28.5\% in 2011 to 30.4\% in 2012.

Figure 9. High Academic Self-Concept, High Social Self-Concept, and High Emotional Health, by Feeling Overwhelmed

Involvement in college might actually be an effective way to bolster students' academic and social self-concepts.
are more likely than peers who report not feeling overwhelmed to report that there is a "very good chance" they will participate in practices that will help them successfully navigate the transition to college and increase their academic self concept, such as communicating regularly with their professors ( $44.8 \%$ versus $34.3 \%$ ), getting tutoring ( $41.1 \%$ versus $26.0 \%$ ), and studying abroad ( $38.0 \%$ versus $25.2 \%$ ). Students who report feeling frequently overwhelmed are also more likely than their peers who report not feeling overwhelmed to say there is a "very good chance" they will participate in activities that have the potential to enrich social self-
concept, including participating in student clubs and groups ( $54.7 \%$ versus $40.2 \%$ ), and seeking personal counseling ( $15.9 \%$ versus $8.6 \%$ ).

Taken together, these findings underscore the need for colleges to attend to signs of being overwhelmed in first-year students and to promote activities that not only support health and wellness, but also highlight important opportunities to build students' self-efficacy related to academics and social life.

## Changing Patterns in Where Students Reside

Fewer incoming students report they plan on living in a college dorm during the fall term, falling from $79.3 \%$ in 2011 to $76.1 \%$ in 2012, a drop of 3.2 percentage points. At the same time, the percentage of incoming students indicating they plan to live with their family or other relatives rose 2.2 percentage points, from $15.0 \%$ in 2011 to $17.2 \%$ in 2012.

Looking more closely at students who live with family, we see differences in the type of institutions they have chosen to attend. Approximately one in five students ( $21.5 \%$ ) attending a fouryear college indicate they plan on living with family, nearly twice the percentage of students attending universities (12.6\%). Students at public four-year colleges are the most likely to live with family $(29.4 \%)$ and the least likely to report living in a college residence hall ( $61.5 \%$ ). We also see gender differences by institution type. At Catholic institutions, more women than men report planning to live with family (17.8\% versus $13.8 \%$ ), while at HBCUs men are more likely to report planning to live with family than women ( $11.2 \%$ versus $8.0 \%$ ).

Students who plan to live at home also have different reasons for choosing their particular college. They are more likely to report that it was very important to live near home (49\%) than those who plan to live in a college residence hall (13.7\%), that their parents wanted them to attend this college ( $23.3 \%$ versus $13.2 \%$ ) and that the cost of attending this college (57.3\% versus $40.1 \%$ ) were "very important" reasons to attend their college.

With regard to how students are paying for college, we have previously reported on the decrease in scholarships and grants, and an increasing reliance on loans (Pryor et al., 2011). When we look specifically at students who plan to live with family, we find that they are less likely to report financing at least some of their first-year expenses through loans ( $48.7 \%$ ) than those who plan to live on campus ( $62.3 \%$ ), a difference of 13.6 percentage points. They are also more likely to indicate that they are not using any family resources to pay for first-year expenses ( $21.1 \%$ compared with $12.7 \%$ of students living in college residence halls).

Rates for using grants and scholarships, however, are comparable to students who plan to live on campus ( $79.6 \%$ versus $80.4 \%$ ). Thus, fewer students who live at home are using loans or family resources to finance their education than those who live in college residence halls. It could be that their choice of college allows them to live at home, saving family financial resources and allowing them to incur less student loan debt.

Students living with family are more likely to be pursuing their degree while balancing work responsibilities. They are also more likely to report that there is a "very good chance" they will get a job to help pay for college expenses ( $55.6 \%$ ) as compared to students who plan on living on campus ( $47.8 \%$ ). Students living with family are also twice as likely to believe there is a "very good chance" they will work full time while attending college (14.0\%) compared to both those who live in a college residence hall (5.9\%), and incoming students overall (7.7\%). Despite balancing work and academic responsibilities, students living with family do not believe that this will have an impact on the completion of their degree. Although they are more likely to believe there is a "very good chance" they will transfer to another college before graduating ( $10.0 \%$ versus $5.2 \%$ ), they are not much more likely than students living in dorms to believe there is a very good chance they will need extra time to complete degree requirements ( $7.9 \%$ versus $5.4 \%$ ), or take a temporary leave of absence ( $3.1 \%$ versus $2.6 \%$ ). While balancing work and academic responsibilities is commonplace for many students, colleges should consider whether the structures and policies they have in place to support students who balance work and academics sufficiently address students who live with family as they pursue their degrees.

## APPENDIX A

## Research Methodology

## RESEARCH METHODOLOGY

The data reported here have been weighted to provide a normative picture of the American college first-year student population for persons engaged in policy analysis, human resource planning, campus administration, educational research, and guidance and counseling, as well as for the general community of students and parents. This Appendix provides a brief overview of the CIRP methodology and describes the procedures used to weight the annual freshman survey results to produce the national normative estimates.

## Historical Overview

From 1966 to 1970, approximately 15 percent of the nation's institutions of higher education were selected by sampling procedures and invited to participate in the program. As the academic community became aware of the value of program participation, additional institutions asked to participate. Beginning in 1971, all institutions that have entering first-year classes and that respond to the U.S. Department of Education's Higher Education General Information Survey were invited to participate. A minimal charge plus a unit rate based on the number of forms processed helps to defray the direct costs of the survey.

## The National Population for 2012

For the purposes of the 2012 CIRP Freshman Survey, the population has been defined as all institutions of higher education admitting first-time first-year students and granting a baccalaureate-level degree or higher listed in the U.S. Department of Education's Integrated Postsecondary Education Data System (IPEDS). An institution is considered eligible if it was operating at the time of the IPEDS survey and had a first-time, full-time freshman class of at least 25 students. In addition, a small number of institutions or their branches are included even though their separate enrollments were not available from the IPEDS files. In 2012, the national population included 1,613 institutions. It should be noted that the population reflects institutions of "higher education," rather than "postsecondary education." Most proprietary, special vocational or semiprofessional institutions are not currently included in the population.

## Institutional Stratification Design

The institutions identified as part of the national population are divided into 26 stratification groups based on type (four-year college, university), control (public, private nonsectarian, Roman Catholic, other religious), institutional race (predominantly non-black, predominantly black), and the "selectivity level" of the institution. Selectivity, defined as the median SAT Verbal and Math scores of the entering class (or ACT composite score), was made an integral part of the stratification design in 1968. Table A1 shows the distribution of institutions across the stratification cells. The dividing lines between low, medium and high selectivity levels are different for different types of institutions and should not be used as a measure of institutional or program quality.

A comprehensive restratification of the national population was undertaken in 2008 and is annually updated, reviewing not only institutions' selectivity scores, but also their control and religious affiliation (if any) as reported to IPEDS. In 2012, "university" is defined by 2010 Basic Carnegie Classification as "research universities" or "doctoral/research universities." Appendix C lists the current stratification cell assignment of institutions that participated in the 2012 CIRP Freshman Survey.

Having defined the population in terms of the stratification cell scheme, the IPEDS file is used to compute the male and female first-time, fulltime (FTFT) population in each cell. These population counts form the target counts of the weighting procedure.

## Identifying the Norms Sample

Generally speaking, an institution is included in the national norms sample if it provided a representative sample of its FTFT population. The minimum percentage required of a sample is 65 percent. Institutions whose sample proportions were less than but close to these cutoffs are included if the method used to administer the survey showed no systematic biases in first-year class coverage.

Information about the FTFT population and the method of survey administration is obtained from participating institutions at the time they return their completed surveys. In the event an institution did not return FTFT information, counts from the most recent IPEDS survey are used. This procedure, although not optimal, is adequate unless the institution experienced a substantial change in its FTFT population since the last IPEDS survey.

## The 2012 Data

Although 236,937 respondents at 389 colleges and universities returned their forms in time for their data to be included in the 2012 norms, the normative data presented here are based on responses from 192,912 FTFT freshmen entering 283 baccalaureate institutions.

The normative data presented here were collected by administering the 2012 CIRP Freshman Survey during registration, freshman orientation, or the first few weeks of classes (i.e., before the students have had any substantial experience with college life). The survey is designed to elicit a wide range of biographic and demographic data, as well as data on the students' high school background, career plans, educational aspirations, financial arrangements, high school activities, and current attitudes.

Table A1. 2012 CIRP Freshman Survey National Norms Sample and Population

| Institution Type | Strat Cell | Selectivity |  | Institutions |  |  | First-time, Full-time Freshmen |  |  |  | Cell Weights |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Level | Average Score | Population | Survey | Norms <br> Sample | Unweighted Number | Weighted |  |  | Men | Women |
|  |  |  |  |  |  |  |  | Number | Men | Women |  |  |
| Public | 1 | low | 800-1079 | 61 | 9 | 5 | 10,551 | 156,683 | 45.5\% | 54.5\% | 11.73 | 11.01 |
| Universities | 2 | medium | 1080-1189 | 56 | 8 | 5 | 9,221 | 187,425 | 48.5\% | 51.5\% | 14.26 | 14.74 |
| Universities | 3 | high | 1190-1600 | 50 | 12 | 8 | 29,532 | 220,553 | 48.8\% | 51.2\% | 5.86 | 5.64 |
| Private | 4 | medium | 800-1184 | 35 | 11 | 7 | 5,668 | 30,744 | 42.5\% | 57.5\% | 4.38 | 4.49 |
| Universities | 5 | high | 1185-1339 | 28 | 12 | 10 | 11,330 | 49,352 | 47.1\% | 52.9\% | 3.06 | 3.56 |
|  | 6 | very high | 1340-1600 | 32 | 7 | 6 | 9,978 | 55,011 | 49.6\% | 50.4\% | 4.67 | 4.51 |
| Public | 7,10 | low | 800-984 | 119 | 9 | 7 | 9,500 | 110,453 | 42.5\% | 57.5\% | 10.09 | 9.48 |
| 4-year | 8 | medium | 985-1034 | 129 | 19 | 12 | 9,303 | 152,320 | 44.4\% | 55.6\% | 12.34 | 11.48 |
| Colleges | 9 | high | 1035-1600 | 103 | 22 | 15 | 15,922 | 134,165 | 46.0\% | 54.0\% | 5.84 | 7.58 |
| Private | 11,15 | low | 800-989 | 128 | 13 | 9 | 2,809 | 42,029 | 44.1\% | 55.9\% | 14.17 | 13.02 |
| Nonsectarian | 12 | medium | 990-1069 | 72 | 22 | 16 | 6,137 | 29,581 | 42.0\% | 58.0\% | 3.87 | 3.98 |
| 4-year | 13 | high | 1070-1189 | 74 | 19 | 14 | 6,182 | 34,747 | 44.7\% | 55.3\% | 4.82 | 4.00 |
| Colleges | 14 | very high | 1190-1600 | 80 | 42 | 36 | 16,498 | 41,767 | 43.5\% | 56.5\% | 2.17 | 2.19 |
| Catholic | 16,19 | low | 800-994 | 62 | 11 | 10 | 2,266 | 19,118 | 35.4\% | 64.6\% | 10.84 | 6.23 |
| 4-year | 17 | medium | 995-1084 | 44 | 13 | 12 | 4,265 | 17,094 | 40.3\% | 59.7\% | 3.53 | 3.26 |
| Colleges | 18 | high | 1085-1600 | 47 | 18 | 17 | 12,193 | 31,587 | 42.7\% | 57.3\% | 2.29 | 2.25 |
| Other | 20,24 | very low | 800-999 | 143 | 21 | 15 | 3,542 | 32,309 | 51.7\% | 48.3\% | 7.23 | 7.16 |
| Religious | 21 | low | 1000-1039 | 77 | 13 | 11 | 2,909 | 20,244 | 46.6\% | 53.4\% | 5.32 | 6.13 |
| 4-year | 22 | medium | 1040-1109 | 76 | 19 | 18 | 4,473 | 29,628 | 42.3\% | 57.7\% | 4.90 | 4.95 |
| Colleges | 23 | high | 1110-1600 | 113 | 50 | 40 | 16,745 | 55,073 | 43.1\% | 56.9\% | 2.64 | 2.68 |
|  | 34,40 | public | - | 40 | 12 | 5 | 2,498 | 31,769 | 41.9\% | 58.1\% | 8.47 | 8.55 |
| Black Colleges | $\begin{aligned} & 35,38 \\ & 39,41 \end{aligned}$ | private | - | 44 | 11 | 5 | 1,390 | 17,223 | 41.3\% | 58.7\% | 22.39 | 6.02 |
| All Institutions |  |  |  | 1,613 | 373 | 283 | 192,912 | 1,498,877 | 45.7\% | 54.3\% |  |  |

-The broad categories of Institution Control (i.e., public, private, and religious affiliation) are defined by data submitted to Integrated Postsecondary Educational Data System (IPEDS).
Universities are those institutions defined by 2010 Basic Carnegie Classification as "Research Universities" or "Doctoral/Research Universities.
Selectivity is based on median SAT Verbal + Math scores and/or ACT composite scores of the entering class as reported to IPEDS. Other comparable sources (e.g., Common Data Set) are used for institutions not reporting SAT/ACT scores to IPEDS. Institutions with unknown selectivity are grouped with the low-selectivity institutions when computing National Norms.
The stratification design presented here is used to group schools to develop population weights and should not be used as a measure of institutional or program quality.
-Cell Weights are the ratio between the number of first-time, full-time freshmen enrolled in all colleges and the number of first-time, full-time freshmen enrolled in the norms
sample colleges
-Two-year colleges are not included in the norms sample.

In addition to standard biographic and demographic items that have been administered annually to each entering class, the survey also contains other research-oriented items that may have been modified from previous years. The inclusion of modified items permits a more thorough coverage of student characteristics but also represents a compromise between two mutually exclusive objectives: (1) comparability of information from year to year which is required for assessing trends; and (2) flexibility in item content to meet changing information and research needs.

The survey, reproduced as Appendix B, has been developed in collaboration with students, professional associations, participating institutions, government agencies, educational researchers, administrators, policy makers, and members of the CIRP Advisory Committee. The survey content is reviewed annually by the research directors at the Higher Education Research Institute (HERI) at UCLA with the assistance of the CIRP Advisory Committee as well as others interested in the annual freshman survey program.

First-time, full-time freshmen enrolled at institutions meeting minimal quality requirements for inclusion in the norms were differentially weighted to represent the national FTFT population. Part-time students and those who are not first-time college students (i.e., transfers and former enrollees) were excluded from the normative sample.

## Weighting the Sample

Those institutions identified as being part of the norms sample are weighted by a two-step procedure. The first weight is designed to adjust for response bias within institutions. Counts of the male and female FTFT population for each institution are divided by that institution's male and female FTFT respondent count. The resulting weights, when applied to each respondent, bring the male and female respondent counts up to the corresponding counts for the population at that institution.

The second weight is designed to compensate for nonparticipating institutions within each stratification cell. The weighted male and female counts for all participating institutions in each stratification cell are first summed, and then are divided into the national male and female FTFT counts for all institutions in that stratification cell, producing a second set of cell weights.

The final weight is simply the product of the first and second weights. Weighting each response in the norms sample using the final weight brings the male and female counts up to the national number of first-time, fulltime freshmen in each stratification cell (see Table A1).

The weighted data are combined separately to form various comparison groups. Comparison groups are hierarchically organized, allowing participating institutions to compare their results by type (four-year college, university), control (public, private nonsectarian, Roman Catholic, other religious), and selectivity level.

## CIRP Constructs

CIRP Constructs represent sets of related survey items that measure an underlying trait or aspect of a student's life. Item Response Theory (IRT), a modern psychometric method that has several advantages over methods used in more traditional factor analysis, is used to create a construct score for each respondent. Computing an individual's construct score in IRT involves deriving a maximum likelihood score estimate based on the pattern of the person's responses to the entire set of survey items for that construct (or to a sub-set of the items that were answered). Items that tap into the trait more effectively are given greater weight in the estimation process (see Table A2). A respondent's construct score is thus not a simple arithmetic mean or weighted
sum, but rather the estimated score that is most likely, given how the student answered the set of items. CIRP Constructs are scored on a Z-score metric and rescaled for a mean of approximately fifty and standard deviation of ten.

The low, average, and high construct score group percentages and the mean for the construct are reported here. Low scores represent students who are one-half standard deviation below the mean. Average scores represent students whose scores are within one-half standard deviation of the mean. High scores represent students who are one-half standard deviation or more above the mean. Please visit HERI's website for more detailed information about CIRP Constructs.

Table A2. List of CIRP Freshman Survey Constructs (including survey items and estimation 'weights')

Habits of Mind is a unified measure of the behaviors and traits associated with academic success.
These learning behaviors are seen as the foundation for lifelong learning.
How often in the past year did you:

- Seek solutions to problems and explain them to others (1.99)
- Support your opinions with a logical argument (1.74)
- Seek alternative solutions to a problem (1.61)
- Evaluate the quality or reliability of information you received (1.58)
- Explore topics on your own, even though it was not required for a class (1.27)
- Ask questions in class (1.20)
- Look up scientific research articles and resources (1.05)
- Revise your papers to improve your writing (1.04)
- Take a risk because you felt you had more to gain (1.03)
- Accept mistakes as part of the learning process (0.95)
- Seek feedback on your academic work (1.24)

Academic Self-Concept is a unified measure of students' beliefs about their abilities and confidence in
academic environments.
Rate yourself on each of the following traits as compared with the average person your age:

- Academic ability (3.52)
- Self-confidence-intellectual (1.22)
- Mathematical ability (1.32)
- Drive to achieve (0.95)

Social Self-Concept is a unified measure of students' beliefs about their abilities and confidence in social situations.
Rate yourself on each of the following traits as compared with the average person your age:

- Self-confidence-social (2.33)
- Popularity (1.92)
- Leadership ability (1.96)
- Public speaking ability (1.68)

## Pluralistic Orientation measures skills and dispositions appropriate for living and working in a diverse society.

Rate yourself on each of the following traits as compared with the average person your age:

- Ability to work cooperatively with diverse people (2.39)
- Ability to discuss and negotiate controversial issues (2.03)
- Tolerance of others with different beliefs (2.35)
- Ability to see the world from someone else's perspective (1.78)
- Openness to having my views challenged (2.13)

Social Agency measures the extent to which students' value political and social involvement as a personal goal.
Indicate the importance to you personally of each of the following:

- Participating in a community action program (2.42) - Influencing social values (1.58)
- Helping to promote racial understanding (2.05)
- Helping others who are in difficulty (1.36)
- Becoming a community leader (2.01)
- Keeping up to date with political affairs (1.35)

Civic Engagement measures the extent to which students are motivated and involved in civic, electoral, and political activities.
Indicate activities you did in the past year:

- Demonstrated for a cause (e.g., boycott, rally, protest) (1.46)
- Worked on a local, state, or national political campaign (1.42)
- Publicly communicated my opinion about a cause (e.g., blog, email, petition) (1.35)
- Helped raise money for a cause or campaign (1.11)
- Performed volunteer work (0.80)

## Table A2 (continued)

College Reputation Orientation measures the degree to which students value academic reputation and future career potential as a reason for choosing this college.
How important was each reason in your decision to come here?

- This college's graduates get good jobs (6.11)
- This college has a very good academic reputation (1.54)
- This college's graduates gain admission to top graduate/professional schools (2.50)

Likelihood of College Involvement is a unified measure of students' expectations about their involvement in college life generally.
What is your best guess as to the chances that you will:

- Participate in student clubs/groups (3.25)
- Participate in a volunteer or community service work (1.58)
- Participate in a study abroad program (1.24)
- Socialize with someone of another racial/ethnic group (1.28)

## APPENDIX B

## The 2012 CIRP <br> Freshman Survey Instrument

PLEASE PRINT IN ALL CAPS YOUR NAME AND PERMANENT/HOME ADDRESS (one letter or number per box).

1. Your sex: $\bigcirc$ Male $\bigcirc$ Female
2. How old will you be on December 31 of this year? (Mark one)

| 16 or younger. | $\bigcirc$ | 21-24 |
| :---: | :---: | :---: |
| 17. | $\bigcirc$ | 25-29 |
| 18. | $\bigcirc$ | 30-39 |
| 19.................. | $\bigcirc$ | 40-54 |
| 20............ | $\bigcirc$ | 55 or |

3. Is English your native language?
$\bigcirc$ Yes

- No

4. In what year did you graduate from high school? (Mark one)

| $2012 \ldots . . . . . . .$. | $\bigcirc$ | Did not graduate but |
| :--- | :--- | :---: |
| $2011 \ldots \ldots . . . . .$. | $\bigcirc$ | passed G.E.D. test. |
| $2010 \ldots . . . . .$. | $\bigcirc$ | Never completed |
| 2009 or earlier | $\bigcirc$ | high school.......... |

5. Are you enrolled (or enrolling) as a:
(Mark one) Full-time student.....
Part-time student. $\qquad$
6. How many miles is this college from your permanent home? (Mark one) 5 or less $\bigcirc \quad 11-50 \bigcirc \quad 101-500$ 6-10 $\bigcirc$ 51-100 $\bigcirc$ Over 500
7. What was your average grade in high school? (Mark one)

| A or A+ $\bigcirc$ | B $\bigcirc$ | C $\bigcirc$ |
| ---: | :--- | :--- |
| A- $\bigcirc$ | B- $\bigcirc$ | D $\bigcirc$ |
| $B+\bigcirc$ | C+ $\bigcirc$ |  |

8. What were your scores on the SAT I and/or ACT?

SAT Critical Reading . $\qquad$

SAT Mathematics $\qquad$

SAT Writing. $\qquad$

ACT Composite

9. From what kind of high school did you graduate? (Mark one)Public school (not charter or magnet)
Public charter school
Public magnet school
Private religious/parochial school
Private independent college-prep school
O Home school
10. Prior to this term, have you ever taken courses for credit at this institution?
$\bigcirc$ Yes
$\bigcirc$ No
11. Since leaving high school, have you ever taken courses, whether for credit or not for credit, at any other institution
(university, 4- or 2-year college, technical, vocational, or business school)?
$\bigcirc$ Yes
$\bigcirc$ No
12. Where do you plan to live during the fall term? (Mark one)
With my family or other relatives. $\qquad$ .
Other private home, apartment, or room . College residence hall. $\qquad$ ..
Fraternity or sorority house $\qquad$ $\bigcirc$
Other campus student housing
Other..
$\qquad$
13. To how many colleges other than this one did you apply for admission this year?

| None | 1 | $\bigcirc$ | 4 | $\bigcirc$ | $7-10$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\bigcirc$ | 2 | $\bigcirc$ | 5 | $\bigcirc$ | 11 or more |
|  | 3 | $\bigcirc$ | 6 | $\bigcirc$ |  |

14. Were you accepted by your first choice college?
$\bigcirc$ Yes
No
15. Is this college your: (Mark one) First choice. $\qquad$
 Less than third Second choice....... choice ........... Third choice. $\qquad$
16. The current economic situation significantly affected my college choice: (Mark one)
Agree Strongly
Agree Somewhat
Disagree Somewhat
Disagree Strongly
17. Citizenship status:
O.S. citizen

Permanent resident (green card)
N Neither
18. Are your parents: (Mark one)

Both alive and living with each other..
Both alive, divorced or living apart. $\qquad$
One or both deceased. $\qquad$ $\bigcirc$
19. During high school (grades 9-12) how many years did you study each of the following subjects? (Mark one for each item)

|  |  |
| :---: | :---: |
| English. | $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ |
| Mathematics | $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ |
| Foreign Language ...... | $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ |
| Physical Science . | $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ |
| Biological Science ...... | $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ |
| History/Am. Gov't. ...... | $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ |
| Computer Science...... | $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ |
| Arts and/or Music ... | $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ |

20. Please mark which of the following courses you have completed:
(V) (N) Algebra II
(Y) (N) Pre-calculus/Trigonometry
(V) (N) Probability \& Statistics
(V) (N) Calculus
(y) (N) AP Probability \& Statistics
(ㄷ) (N) AP Calculus
21. Do you have any of the following disabilities or medical conditions? (Mark Yes or No for each item)
(1) (N) Learning disability (dyslexia, etc.)
(Y) (N) Attention deficit hyperactivity disorder (ADHD)
(V) (N) Autism spectrum/Asperger's syndrome
(y) (N) Physical disability (speech, sight, mobility, hearing, etc.)
(Y) (N) Chronic illness (cancer, diabetes, autoimmune disorders, etc.)
(®) (N) Psychological disorder (depression, etc.)
(Y) (N) Other
22. Do you consider yourself:

| (Mark Yes or No for each item) | Yes No |
| :--- | :--- | :--- |
| Pre-Med.......................................... |  |
| Pre-Law .......................................... |  |

23. Please mark your probable major. (Use codes provided on the attached fold-out)

24. How much of your first year's educational expenses (room, board, tuition, and fees) do you expect to cover from each of the sources listed below? (Mark one answer for each possible source)
Family resources (parents, relatives, spouse, etc.)
$\qquad$
My own resources (savings from work, work-study, other income) $\qquad$ $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$
Aid which need not be repaid
(grants, scholarships, military funding, etc.).

Aid which must be repaid
(loans, etc.)

25. What is your best estimate of your parents' total income last year? Consider income from all sources before taxes. (Mark one)

| $\bigcirc$ | Less than $\$ 10,000$ | $\bigcirc$ |
| :--- | :--- | :--- |
| $\bigcirc \$ 50,000-59,999$ |  |  |
| $\bigcirc$ | $\$ 10,000-14,999$ | $\bigcirc$ |
| $\bigcirc \$ 15,000-19,999$ | $\bigcirc$ | $\$ 75,000-74,999$ |
| $\bigcirc$ | $\$ 20,000-24,999$ | $\bigcirc$ |
| $\bigcirc \$ 100,000-149,999$ |  |  |
| $\bigcirc \$ 25,000-29,999$ | $\bigcirc$ | $\$ 150,000-199,999$ |
| $\bigcirc$ | $\$ 30,000-39,999$ | $\bigcirc$ |
| $\bigcirc \$ 40,000-49,999$ | $\bigcirc$ | $\$ 250,000-249,999$ |
|  |  |  |

26. Do you have any concern about your ability to finance your college education? (Mark one)

None (I am confident that I will have sufficient funds) $\qquad$ $\bigcirc$
Some (but I probably will have enough funds)..
Major (not sure I will have enough funds to complete college)
27. Current religious preference:
(Mark one in each column)
Baptist.
(Y) (F) (M)

Buddhis (V) (F) (II)

Church of Christ ................................... (V) (F) (I)
Eastern Orthodox ................................. (®) (F) (I)
Episcopalian ........................................ (V) (F) (II)
Hindu .................................................. (V) (®)
Jewish. (V) (F) (I)

LDS (Mormon)...................................... (Y) (F) (I)

Lutheran .. (V) (F) (II)

Methodist. (1) (F) (M)

Muslim (1) (F) (M)

Presbyterian (V) (F) (M)

Quaker. (V) (F) (I)

Roman Catholic (V) (F) (II)

Seventh Day Adventist (V) (F) (I) United Church of Christ/Congregational (1) (F) (II) Other Christian (V) (F) (I)

Other Religion (V) (F) (ID)

None

28. Do you consider yourself: (Mark Yes or No for

| each item) | Yes No |
| :--- | :--- |
| Born-Again Christian ............................................................................... | $\bigcirc$ |
| Evangelical .......... |  |

29. What is the highest academic degree that you intend to obtain?
(Mark one in each column)

## None

Vocational certificate $\qquad$
Associate (A.A. or equivalent)... Bachelor's degree (B.A., B.S., etc.) . Master's degree (M.A., M.S., etc.). Ph.D. or Ed.D M.D., D.O., D.D.S., or D.V.M. J.D. (Law) $\qquad$ B.D. or M.DIV. (Divinity) $\qquad$ Other. $\qquad$
30. For the activities below, indicate which ones you did during the past year. If you engaged in an activity frequently, mark (F) If you engaged in an activity one or more times, but not frequently, mark (O) (Occasionally). Mark (N) (Not at all) if you have not performed the activity during the past year. (Mark one for each item)
Attended a religious service ......

Demonstrated for a cause (e.g., boycott, rally, protest)............. (F) (O) (N)

Tutored another student............
(F) (O) (N)

Studied with other students....... (F) (O) (N)
Was a guest in a teacher's home .. (F) (O) (N)
Smoked cigarettes.....................
(F) © (N)

Drank beer................................ (F) (O) (N)
Drank wine or liquor .................. (F) (0) (N)
Felt overwhelmed by all I had to do.. (F) (O) (D)
Felt depressed........................... (F) (O) (N)
Performed volunteer work ......... (F) (O) (N)
Asked a teacher for advice
after class............................... (F) (O) (N)
Voted in a student election........ (F) (O) (N)
Socialized with someone of
another racial/ethnic group...... (F) (O) (N)
Came late to class..................... (F) (O) (N)
Used the Internet for research or homework .........................
Performed community service
as a part of a class.................. (F) (O) (N)
Discussed religion ..................... (F) (O) (N)
Discussed politics...................... (F) (O) (N)
Worked on a local, state, or national political campaign...... (F) (O)
Skipped school/class................. (F) (O) (D)
Publicly communicated my opinion about a cause (e.g., blog, email, petition)................ Helped raise money for a cause or campaign. (F) (O) (N)
(F) (O) (N)

Fell asleep in class.................... (F) (O) (N)
Failed to complete homework
on time $\qquad$ (F) (O) (N)
31. Rate yourself on each of the following traits as compared with
the average person your age. We want the most accurate estimate of how you see
yourself.
(Mark one for each item)
Ability to see the world
from someone else's
perspective..............
Tolerance of others
with different beliefs.
$\begin{aligned} & \text { Openness to having } \\ & \text { my own views } \\ & \text { challenged.............. }\end{aligned}$
Ability to discuss and
negotiate controversial
issues......................
Ability to work
cooperatively with
diverse people..........
32. What is the highest level of formal
education obtained by your parents? (Mark one in each column) Junior high/Middle school Father Mother or less $\qquad$
$\qquad$
$\square$
Some high school
High school graduate
Postsecondary school other than college.
Some college. $\qquad$

College degree $\qquad$

Some graduate school
Graduate degree
33. How often in the past year
did you?
(Mark one for each item)
Ask questions in class........... (F) (O)
Support your opinions with

Seek solutions to problems
and explain them to others.. (F) (O) (N)
Revise your papers to
improve your writing........... (F) © (N)
Evaluate the quality or reliability of information you received....................... (F) (O) (N)
Take a risk because you feel you have more to gain ....... (F) (O) (N)
Seek alternative solutions
to a problem ....................... (F) (O) (N)

Look up scientific research articles and resources........ (F) (O) (N)
Explore topics on your own, even though it was not required for a class
(F) (ㅇ)

Accept mistakes as part of the learning process........... (F) (O) (N)
Seek feedback on your academic work..
(F) (O) (N)

Work with other students on group projects
(F) (O) (N)

Integrate skills and knowledge
from different sources and experiences
(F) (O) (N)
34. Mark only three responses, one in each column.
(II) Your mother's occupation-
(F) Your father's occupation-
(y) Your probable career occupation

| Accountant or actuary .................. | (1) (F) (1) |
| :---: | :---: |

Other.
(Y) (F) (I)

Undecided (v)
35. Are you: (Mark all that apply)
White/Caucasian ...............................
African American/Black .................
American Indian/Alaska Native .......
Asian American/Asian .....................
Native Hawaiian/Pacific Islander .....
Mexican American/Chicano.............
Muerto Rican.............................................................................................................................................
36. Mark one in each row:
(1) Disagree Strongly
(2) Disagree Somewhat
(3) Agree Somewhat
(4) Agree Strongly

Abortion should be legal.................................................................................... (4) (3) (2) (1)
The death penalty should be abolished ............................................................. (4) (3) (2) (1)
Racial discrimination is no longer a major problem in America ........................... (4) (3) (2) (1)
Realistically, an individual can do little to bring about changes in our society...... (4) (3) (2) (1)
Wealthy people should pay a larger share of taxes than they do now................ (4) (3) (2) (1)
Same-sex couples should have the right to legal marital status........................... (4) (3) (2) (1)

A national health care plan is needed to cover everybody's medical costs.......... (4) (3) (2) (1)
Dissent is a critical component of the political process........................................ (4) (3) (2) (1)
Students from disadvantaged social backgrounds should be given preferential treatment in college admissions.
(4) (3) (2) (1)

Colleges should prohibit racist/sexist speech on campus................................... (4) (3) (2) (1)
37. How would you characterize your
political views? (Mark one)
$\bigcirc$ Far left
Liberal
Middle-of-the-road
Conservative
Far right
38. In deciding to go to college, how important to you was each of the following reasons?
(Mark one answer for each possible reason)
To be able to get a better job ........... (V) (S) (N)
To gain a general education
and appreciation of ideas............. (V) (S) (N)
To make me a more cultured
person ....................................... (v) (S) ©
To be able to make more money...... (V) (S)
To learn more about things that
interest me ................................. (v) (S) ©
To get training for a specific career. (V) (S) ©
To prepare myself for graduate or
professional school ...................... (V) (S) ©
39. During your last year in high school, how much time did you spend during a typical week doing the
following activities
Hours per week:
Studying/homework.
Socializing with friends.
Talking with teachers
outside of class
Exercise or sports...
Partying
........................

Working (for pay)........
Volunteer work $\qquad$

Student clubs/groups..
Watching TV
Household/childcare
duties.......................
Reading for pleasure..
Playing video/ computer games.
Online social networks
(Myspace, Facebook, etc.)
40. Below are some reasons that might have influenced your decision to attend this particular college. How important was each reason in your decision to come here? (Mark one answer for each possible reason)

My parents wanted me to come here.. (v) (S) ©
My relatives wanted me to come here. (v) (S) ©
My teacher advised me ...................... (v) (S) (N)
This college has a very good academic reputation (v) (N)

This college has a good reputation
for its social activities.
(v) (s)

I was offered financial assistance ...... (V) (S) ©
The cost of attending this college ...... (V) (S) ©
High school counselor advised me .... (v) (S) ©
Private college counselor advised me.... (V) (S) ©
I wanted to live near home................. (v) (s) ©
Not offered aid by first choice ............ (v) (S) ©
Could not afford first choice .
(v) (S) (N)

This college's graduates gain
admission to top graduate/
professional schools.
(v) (S) (N)

This college's graduates get good jobs. (v) (S) ©
I was attracted by the religious
affiliation/orientation of this college .. (v) (S) (N)
I wanted to go to a school about the
size of this college.............................
Rankings in national magazines ........ (v) (s) ©
Information from a website................. (v) (S) ©
I was admitted through an Early
Action or Early Decision program..... (V) (S) (N)
The athletic department recruited me.. (v) (S) ©
A visit to this campus.......................... (v) (S) (N)
Ability to take online courses.............. (v) (S) ©
The percentage of students that
graduate from this college.
(v) (S) (N)

| 41. Rate yourself on each of the followi compared with the average person age. We want the most accurate estimate of how you see yourself. (Mark one in each row) |  |
| :---: | :---: |
| Academic ability | $\bigcirc \bigcirc 000$ |
| Artistic ability | $\bigcirc \bigcirc \bigcirc 0 \bigcirc$ |
| Competitiveness. | -0000 |
| Computer skills. | $\bigcirc \bigcirc \bigcirc \bigcirc$ |
| Cooperativeness. | -0000 |
| Creativity.. | -0000 |
| Drive to achieve. | $\bigcirc 0000$ |
| Emotional health. | $\bigcirc 0000$ |
| Leadership ability | $\bigcirc \bigcirc \bigcirc \bigcirc$ |
| Mathematical ability. | -0000 |
| Physical health | $\bigcirc 0000$ |
| Popularity.. | -0000 |
| Public speaking ability.. | $\bigcirc \bigcirc \bigcirc 0 \bigcirc$ |
| Self-confidence (intellectual) | $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ |
| Self-confidence (social) | -0000 |
| Self-understanding . | $\bigcirc \bigcirc \bigcirc \bigcirc$ |
| Spirituality.. | -0000 |
| Understanding of others. | -0000 |
| Writing ability | $\bigcirc \bigcirc \bigcirc 0 \bigcirc$ |

42. Military Status: (Mark one)

O None
ROTC, cadet, or midshipman at a service academy
In Active Duty, Reserves, or National Guard
A discharged veteran NOT serving in Active Duty, Reserves, or National Guard
43. How would you describe the racial composition of the high school you last attended and the neighborhood where you grew up? (Mark one in each row)

High school I last attended $\qquad$ Neighborhood where I grew up $\qquad$

44. How many years do you expect it will take you to graduate from this college?
$\bigcirc 1 \bigcirc 2 \bigcirc 3 \bigcirc 4 \bigcirc 5+$

Do not plan to graduate from this college
45. Please indicate the importance to you
(N) Not Important personally of each of the following: (S) Somewhat Important (Mark one for each item)

Becoming accomplished in one of (E) Very Important (E) Essential
the performing arts (acting, dancing, etc.).
(E) (V) (S) (N)

Becoming an authority in my field....................................... (E) (V) (S) (N)
Obtaining recognition from my colleagues for
contributions to my special field.
(E) (V) (S) (N)

Influencing the political structure........................................ (E) (V) (S) (N)
Influencing social values .................................................... (E) (V) (S) (I)
Raising a family
(E) (V) (S) (N)

Being very well off financially .............................................. (E) (V) (S) (N)
Helping others who are in difficulty ...................................... (E) (V) (S) (N)
Making a theoretical contribution to science ........................ (E) (V) (S) (N)
Writing original works (poems, novels, etc.)........................ (E) (V) (S) (N)
Creating artistic works (painting, sculpture, etc.) .................... (E) (V) (S) (N)
Becoming successful in a business of my own.................... (E) (V) (S) (N)
Becoming involved in programs to clean up the environment (E) (V) (S) (N)
Developing a meaningful philosophy of life.
(E) (V) (S) (N)

Participating in a community action program ...................... (E) (V) (S) (N)
Helping to promote racial understanding ............................. (E) (V) (S) (N)
Keeping up to date with political affairs............................... (E) (V) (S) (N)
Becoming a community leader........................................... (E) (V) (S) (1)
Improving my understanding of other countries and cultures. (E) (V) (S) (N)
Adopting "green" practices to protect the environment.
(E) (V) (S)

The remaining ovals are provided for questions specifically designed by your college rather than the Higher Education Research Institute. If your college has chosen to use the ovals, please observe carefully the supplemental directions given to you.

## APPENDIX D

The Precision of the Normative Data and Their Comparisons

## THE PRECISION OF THE NORMATIVE DATA AND THEIR COMPARISONS

A common question asked about sample surveys relates to the precision of the data, which is typically reported as the accuracy of a percentage "plus or minus x percentage points." This figure, which is known as a confidence interval, can be estimated for items of interest if one knows the response percentage and its standard error.

Given the CIRP's large normative sample, the calculated standard error associated with any particular response percentage will be small (as will its confidence interval). It is important to note, however, that traditional methods of calculating standard error assume conditions which, (as is the case with most real sample survey data), do not apply here. Moreover, there are other possible sources of error which should be considered in comparing data across normative groups, across related item categories, and over time. In reference to the precision of the CIRP data, these concerns include:

1) Traditional methods of calculating standard error assume that the individuals were selected through simple random sampling. Given the complex stratified design of the CIRP, where whole institutions participate, it is likely that the actual standard errors will be somewhat larger than the standard error estimates produced through traditional computational methods. In addition, while every effort has been made to maximize the comparability of the institutional sample from year to year (repeat participation runs
about 90 percent), comparability is reduced by non-repeat participation and year-to-year variation in the quality of data collected by continuing institutional participants. While the CIRP stratification and weighting procedures are designed to minimize this institutional form of "response bias," an unknown amount of non-random variation is introduced into the results.
2) The wording of some questions in the survey instrument, the text and number of response options, and their order of presentation have changed over the years. We have found that even small changes can produce large order and context effects. Given this, the exact wording and order of items on the survey instrument (see Appendix B) should be examined carefully prior to making comparisons across survey years.
3) Substantial changes in the institutional stratification scheme were made in 1968, 1971, 1975, 2001, and 2009. These changes resulted in a revision of the weights applied to individual institutions. Stratification cell assignments of a few institutions may also change from time to time, but the scale of these changes and their effect on the national normative results are likely to be small in comparison to other sources of bias.

Since it is impractical to report statistical indicators for every percentage in every CIRP comparison group, it is important for those who
are interested to be able to estimate the precision of the data. Toward this end, Table D1 provides estimates of standard errors for comparison groups of various sizes and for different percentages ${ }^{1}$ which can be used to derive confidence interval estimates.

For example, suppose the item we are interested in has a response percentage of 15.7 percent among students at all nonsectarian four-year colleges (a normative group that is 39,525 in size). First, we choose the column that is closest to the observed percentage 15.7 -in this case " $15 \%$." ${ }^{2}$ Next, we select the row closest to the unweighted sample size of 39,525-in this case "40,000." Consulting Table D1, we find the estimated standard error would be . 179 .

To calculate the confidence interval at the 95\% probability level, we multiply the estimated standard error by the critical value of $t$ for the unweighted sample size (which, for all CIRP comparison groups, will be equal to 1.96 at the .05 level of probability). ${ }^{3}$ In this example, we would multiply the estimated standard error of .179 by 1.96 , which yields .350 . If we round this figure to a single decimal point we would then estimate our confidence interval to be $15.7 \pm .4$. In practical terms, this confidence interval means that if we were to replicate this survey using the same size sample, we would expect that the resulting percentage would fall between 15.3 percent and 16.1 percent 95 times out of 100 .

Table D1. Estimated Standard Errors of Percentages for Comparison Groups of Various Sizes

| Unweighted size of <br> comparison groups |  | $\mathbf{1 \%}$ | $\mathbf{5 \%}$ | $\mathbf{1 0 \%}$ | $\mathbf{1 5 \%}$ | $\mathbf{2 0 \%}$ | $\mathbf{2 5 \%}$ | $\mathbf{3 0 \%}$ | $\mathbf{3 5 \%}$ | $\mathbf{4 0 \%}$ | $\mathbf{4 5 \%}$ |

## ABOUT THE AUTHORS

John H. Pryor is Director of the Cooperative

The authors (Jennifer Berdan not pictured) Institutional Research Program (CIRP). He is also the Managing Director of the Higher Education Research Institute (HERI), where the CIRP surveys are administered. Mr. Pryor's specific interests are in college student alcohol use, health issues, at-risk behaviors, and survey research methodology. As the Director of the CIRP surveys, he conducts longitudinal research on the changing nature of college students and the impact of college.

Kevin Eagan is Assistant Professor in Residence and Assistant Director for Research at the Higher Education Research Institute at UCLA. Dr. Eagan's primary responsibility within HERI is to conduct and promote research using CIRP data to improve policy and practice in education. His research interests include issues related to undergraduate science, technology, engineering, and mathematics (STEM) education, contingent faculty, student retention, institutional contexts and structures of opportunity, survey validity and reliability, and advanced quantitative methods.

Laura Palucki Blake is the Cooperative Institutional Research Program's (CIRP) Assistant Director. Dr. Palucki Blake's primary responsibilities include working with institutions to both implement the various CIRP surveys and to develop and communicate effective and innovative ways of using data for institutional improvement. Dr. Palucki Blake's research interests include assessment and accountability in higher education, the use of institutional data to foster greater understanding of student learning and development, and issues of access and equity during college.

Sylvia Hurtado is Director of the Higher Education Research Institute (HERI) at UCLA and Professor in the Graduate School of Education and Information Studies. Dr. Hurtado has published numerous articles and books related to her primary interest in student educational outcomes, STEM education, campus climates, and diversity in higher education. She has served on many editorial boards for journals in education and served on the board of the Higher Learning Commission and National Academies' Board of Higher Education and Work, and she is past President of the Association for the Study of Higher Education (ASHE).

Jennifer Berdan is doctoral student in the Higher Education and Organizational Change program at UCLA's Graduate School of Education and Information Studies, and an analyst for the Cooperative Institutional Research Program. Her research interests include gender, faculty, and organizational and comparative studies. She earned her M.A. in higher education from the University of Redlands and her B.A. in economics from Sonoma State University.

Matthew H. Case is the Senior Data Manager at HERI. His responsibilities include developing and maintaining the HERI research databases; computing the National Norms tables; and producing institutional reports and other specialized reports for analysis of CIRP data.

The American Freshman: National Norms for Fall 2012*
December 2012, 85 pages
E-book with expanded tables, 189 pages
Provides national normative data on the characteristics of students attending American colleges and universities as first-time, full-time freshmen. Data from 192,912 entering first-year students are statistically adjusted to reflect the 1.4 million students entering four-year institutions for the first time in 2012. The annual report covers: demographic characteristics; expectations of college; degree goals and career plans; college finances; and attitudes, values, and life goals.
*Publications from earlier years are also available.

## Undergraduate Teaching Faculty:

 The 2010-2011 HERI Faculty Survey*October 2012, 99 pages
E-book with expanded tables, 231 pages
Provides an informative profile of full-time undergraduate faculty at American colleges and universities. The 2010-2011 norms covers several areas: Faculty Work-Life, Use of StudentCentered Pedagogy, and Training the Next Generation of Faculty. The report includes a section devoted to examining the experiences and perceptions of part-time faculty as well. Results are reported by institutional type for all faculty, male faculty, and female faculty.
*Publications from earlier years, under the title The American College Teacher, are also available: 2007-2008, 2004-2005, 2001-2002, 19981999, 1995-1996, 1992-1993, 1989-1990.

## Completing College:

Assessing Graduation Rates
at Four-Year Institutions
November 2011, 55 pages
Provides the latest information on four-, five-, and six-year degree attainment rates collected longitudinally from 356 baccalaureate-granting institutions. Differences by institutional type, gender, first-generation status, and race/ethnicity are examined. The study highlights main predictors of degree completion and provides several formulas for calculating expected institutional completion rates.

## The American Freshman: Forty Year Trends

 March 2006, 261 pagesSummarizes trends data in the Cooperative Institutional Research Program (CIRP) Freshman Survey between 1966 and 2006. The report examines changes in the diversity of students entering college; parental income and students' financial concerns; and issues of access and affordability in college. Trends in students' political and social attitudes are also covered.

## Advancing in Higher Education: <br> A Portrait of Latina/o College Freshmen at Four-Year Institutions, 1975-2006

October 2008, 90 pages
With national data taken from the Cooperative Institutional Research Program (CIRP) Freshman Survey, this report is a data resource for higher education in understanding the unique characteristics of the increasing numbers of Latina/o first-time, full-time freshmen. For the first time, CIRP trends are disaggregated by specific Latina/o ethnic origin group and by gender, to highlight the heterogeneity in the population unavailable in other national reports on Hispanic college students.

## Beyond Myths: The Growth and Diversity of Asian American College Freshmen, 1971-2005

 September 2007, 63 pagesThe first-year student trends examined in this report help to address some common characterizations of Asian American students, particularly with respect to their educational success, that are often overstated and taken out of context. The findings suggest that Asian Americans still have to overcome a number of obstacles, such as levels of family income and financial aid, to earn a coveted spot in higher education. Featuring data collected from the Cooperative Institutional Research Program (CIRP) Freshman Survey, it is based on 361,271 Asian/Asian American first-time full-time students who entered college between 1971 and 2005-representing the largest compilation and analysis of data on Asian American college students ever undertaken.

## First in My Family: <br> A Profile of First-Generation College Students at Four-Year Institutions Since 1971

February 2007, 62 pages
First-generation college students are receiving increasing attention from researchers, practitioners, and policymakers who seek to understand students' college decision-making process in order to support their progress in higher education. This report explores the changing dynamic between firstgeneration college students and their non-first-generation peers by utilizing longitudinal trends data collected through the Cooperative Institutional Research Program (CIRP) Freshman Survey from 1971 to 2005.

## Black Undergraduates From Bakke to Grutter November 2005, 41 pages

Summarizes the status, trends, and prospects of Black college freshmen using data collected from 1971 to 2004 through the Cooperative Institutional Research Program (CIRP). Based on more than half a million Black freshman students, the report examines gender differences; socioeconomic status; academic preparation and aspirations; and civic engagement.

[^1]:    ${ }^{1}$ Calculated by $\sqrt{\frac{\mathrm{x} \%(100-\mathrm{x} \%)}{\mathrm{N}}}$ where x is the percentage of interest and N is the population count from Table A1.
    ${ }^{2}$ Since the distribution of the standard errors is symmetrical around the 50 percent mid-point, for percentages over 50 simply subtract the percentage from 100 and use the result to select the appropriate column. For example, if the percentage we were interested in was $59,100-59$ percent yields 41 , so we would use the column labeled ' $40 \%$.'
    ${ }^{3}$ To calculate the confidence interval at the $99 \%$ probability level the critical t value is 2.56 .
